ACKNOWLEDGMENTS

The principal author of the 2004 edition of *Northern Indicators* is Cheryl Yan of First Nations and Northern Statistics. This publication has been prepared under the direction of Pierre Gauvin, Manager First Nations and Northern Statistics. Thanks also to Christiane Gour, First Nations and Northern Statistics.

NOTE TO USERS

This edition of *Northern Indicators* can only be found as an electronic copy online. It is available through INAC's internet website, at http://www.ainc-inac.gc.ca/pr/sts/index_e.html

MAIN DATA SOURCES

This report presents a profile of the social, economic, and public finance characteristics of Yukon, Northwest territories and, where possible, Nunavut. The primary data source for this publication is the Canadian Socio-Economic Information Management System (CANSIM 2). Maintained by Statistics Canada, the CANSIM 2 database contains information on measures of Canada's population, economy, and industry. This issue incorporates all new data revisions available as of June 2004.

Statistics Canada data collection methodologies can change. Therefore, readers should note that data series in this edition may not be comparable to previous editions of *Northern Indicators*. Readers are therefore encouraged to consult all footnotes or the original source to determine what data have been used to produce the tables and charts, noting that source data may have been updated since, or sources altogether changed from previous editions of *Northern Indicators*.

| | CANADA | YUKON | NWT | NUNAVUT |
|--|---------|-------|-------|---------|
| Number of deaths | 115,130 | 203 | 318 | 1,282 |
| Mortality rate per 100,000 population | 393.5 | 685.5 | 791.3 | 4,584.7 |

NOTES:

- Counts in this table are based on three consecutive years of death data, summed and divided by three. Rates are based on these counts divided by the population estimate of the middle year. The reference period associated with these data reflects the midpoint of the three-year period.
- Rates are age-standardized using the direct method, and the 1991 Canadian Census population structure. All rates are per 100,000 population. The use of a standard population results in more meaningful mortality rate comparisons because it adjusts for variations in population age distributions over time and across geographic areas.

NOTES:

1. Quarterly statistics shown here are calculated from monthly data.

2. Monthly sales statistics are collected through the Retail Trade Survey, which collects retail sales, receipts and number of retail locations by geographic region from retail enterprises that are considered large multi (4 locations or more and 5 million per year within a trade group) and other retail establishments. It excludes vending machine operators and direct sellers.

GLOSSARY

CAPITAL CONSUMPTION ALLOWANCE - allowance for the cost of using up capital in the production process.

CAPITAL EXPENDITURE - expenditures including the cost of procuring, constructing, and installing new durable plant and machinery and equipment.

CONSTANT PRICES - a price value expressed as the price prevailing during a reference period. In this publication, constant prices refer to values indexed against the Consumer Price Index (CPI), or Implicit Price Index (IPI) during the 1997 reference year.

CONSUMER PRICE INDEX (CPI) - an indicator of price movements in consumer prices paid by target populations. The cost of a fixed basket of commodities is expressed relative to a reference period. As of this publication, the reference year for the CPI, as published by Statistics Canada, is 1992. CPIs are published for Canada, the provinces, Whitehorse, and Yellowknife.

CURRENT PRICES - prices expressed at the prices prevailing during the year indicated. All prices and expenditures in this publication are expressed in current prices unless otherwise indicated.

FACTOR COST - value remaining after applicable taxes and subsidies are deducted from market prices, reflecting the costs of labour and capital (i.e., production factors).

GROSS DOMESTIC PRODUCT (GDP) - the total unduplicated value of goods and services produced in the economic territory of a given country or region during a given period. GDP can be valued at factor cost or at market prices.

IMPLICIT PRICE INDEX (IPI) - n.b. in this publication, IPI used is the IPI, final domestic demand (FDDIPI): an indicator of the price movement in consumption throughout all sectors of the economy, including consumers, government industries, and private industries. As of this publication, the reference year for the IPI, as published by Statistics Canada, is 1997.

PARTICIPATION RATE - according to the national criteria used in Statistics Canada's Labour Force Survey, the **participation rate** is the percentage of the total population ages 15 years and over, who are part of the labour force (i.e., unemployed or employed).

REPAIR AND MAINTENANCE EXPENDITURE - expenditures not considered capital; expenditures charged against revenue in the year incurred and made in order to maintain fixed assets or productive capacity in good working conditions.

UNEMPLOYMENT(national criteria) - persons who, during the reference week of the survey, were available for work but were on temporary layoffs, or had looked for work in the past four weeks, or had a job to start within the next four weeks. The **unemployment rate** is the percentage of the total persons in the labour force who are unemployed.
