Gross Domestic Product (GDP) by Industry at Basic Prices 2018

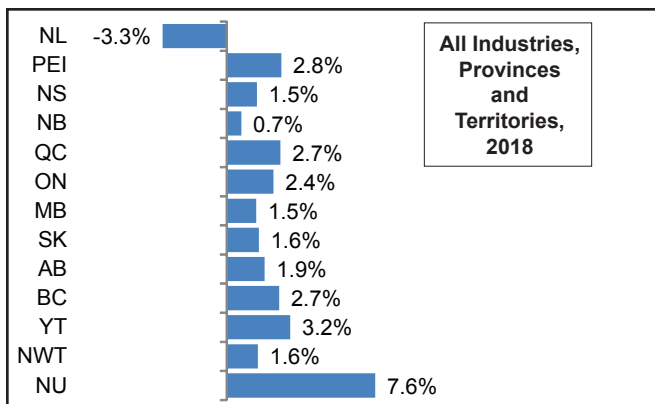

Highlights:

- Yukon's real GDP by industry for 2018 was \$2,593.2 million (in chained (2012) dollars); an increase of 3.2% following a 1.0% (revised) increase in 2017.
- In 2018, the largest dollar-amount gain was in the *Construction* sector, with an increase of \$82.5 million, up 32.7% from 2017 (revised). The GDP of an industry represents the value added by labour and capital in transforming inputs purchased from other industries into output. This analytical report presents Statistics Canada's latest estimates of Yukon's real GDP by industry at basic prices in chained (2012) dollars. These figures are subject to revision.

GDP is one of the primary economic indicators used by decision-makers within the governments and financial and other institutions to evaluate the health of the economy. A large increase in real GDP is interpreted as a sign that the economy is doing well, while a small or negative increase indicates poor economic performances.

Growth Rates of GDP by Industry (based on real GDP in chained (2012) dollars)

Note: The current calculation of GDP is based on the input-output structure of the economy in 2016 (benchmark year). Substantial revisions in subsequent years can occur due to updated benchmark year. Please see endnote 2 on page 8.

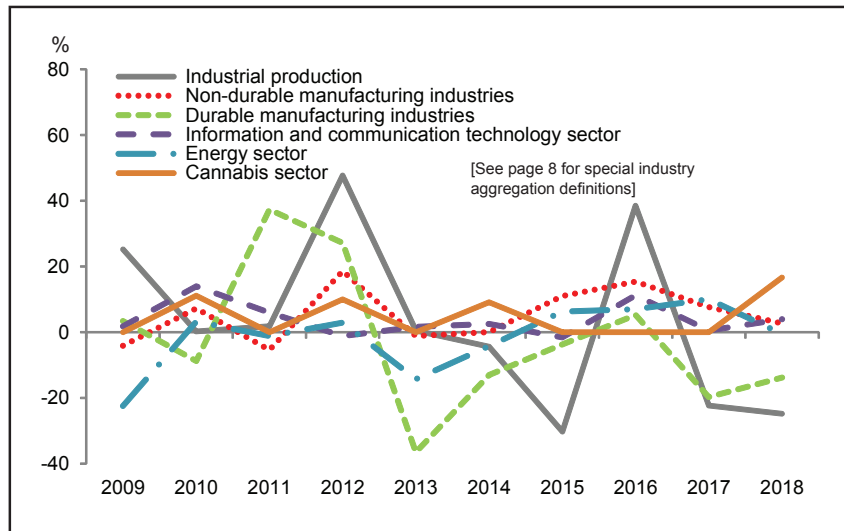

Over the past ten years (revised figures), the growth rate of Yukon's GDP by industry varied from a low of -7.6% in 2015 to a high of 7.2% in 2016. In 2009 through 2012, the high growth rate continued with an overall declining trend. The growth rate slowed down in 2013 and 2014, dropped to -7.6% in 2015, and then bounced back to 7.2% in 2016. The growth rate in 2017 dropped to 1.0% before increasing to 3.2% in 2018.

In 2018, Yukon's GDP in the *Goods-producing* industries increased 2.2%; in the *Services-producing* industries, the GDP increased 3.5%.

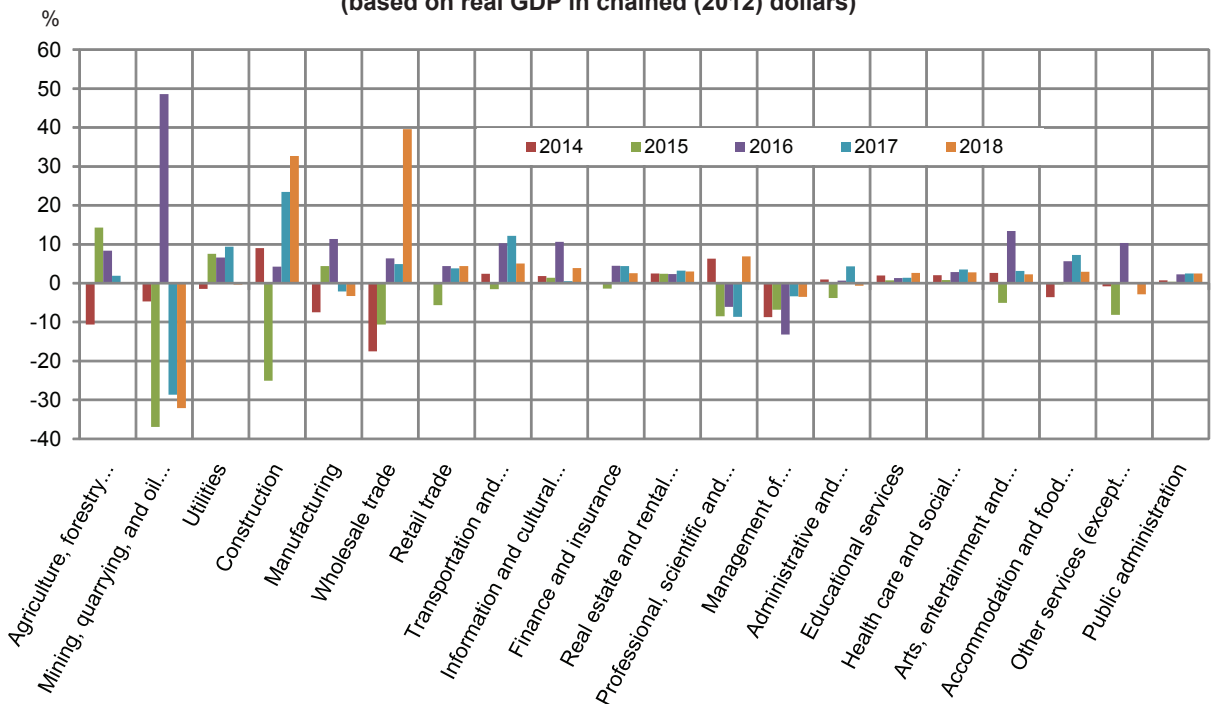

Between 2009 and 2018, the GDP growth rate for the *Goods-producing* industries fluctuated considerably (from -28.3% in 2015 to 24.3% in 2016) due mainly to activities in *Mining, quarrying, and oil and gas extraction*. However, the GDP growth rate for the *Services-producing* industries fluctuated within a relatively narrow margin (from -0.6% in 2015 to 4.2% in 2011) over the same period.

- The *Information and communications technology sector's* GDP growth rate had a relatively low fluctuation range that varied from -1.6% in 2015 to 14.0% in 2010.
- While manufacturing industries represent less than one percent of the total GDP, the growth rate for *Non-durable manufacturing industries* fluctuated between -5.4% in 2011 and 18.6% in 2012, and that for the *Durable manufacturing industries* fluctuated between -36.6% in 2013 and 37.3% in 2011.
- The Cannabis sector also represents less than one percent of the total GDP. This sector's growth rate was 16.7% in 2018, the first year of cannabis legalization.

Endnotes:

¹ Statistics Canada uses the chain Fisher volume index method of calculating the real GDP. This method was adopted as it produces the most accurate measure of growth in GDP and its components, and the change brings the Canadian measure in line with the US quarterly Income and Product Accounts which also use the chain Fisher formula to measure real GDP.

An important consequence of using chain indexes is that the associated volume measures are not additive. That is, the sum of the chained values for each component of an aggregate does not equal the chained value of the aggregate. For example, the sum of the components of the Transportation & Warehousing Industry is not equal to the number given for that industry, just as the sum of the individual industry sectors is not equal to the number given for All Industries.

For more information on chain indexes, visit: https://www.statcan.gc.ca/eng/nea/gloss/gloss_c#Chainindex

² The most recent benchmark year for which the input-output structure of Yukon's economy is measured is 2016 and therefore it is the most current year for which the contributions of different industries to GDP may be accurately measured. GDP calculations for subsequent years are projections based on the structure of Yukon's economy in 2016 and changes in prices and output volumes in intervening years. Substantial revisions to these estimates can occur if there are major changes to the structure of the economy; for example, the opening or closing of a large mine after the most recent input/output accounts reference year.
