### Highlights:

- Yukon's real GDP by industry (at basic prices) for 2020 was \$2,686.9 million (in chained (2012) dollars); an increase of 5.2% following a 2.0% (revised) decrease in 2019.
- In 2019, the largest dollar-amount gain was in the Mining, quarrying, and oil and gas extraction sector, with an increase of \$166.8 million, up 121.7% from 2019 (revised). The largest dollar-amount decrease was in the Accommodation and food services sector with a contraction of \$32.9 million, down 37.0% from 2019 (revised).

The GDP of an industry represents the value added by labour and capital in transforming inputs purchased from other industries into output. This analytical report presents Statistics Canada's latest estimates of Yukon's real GDP by industry at basic prices in chained (2012) dollars. These figures are subject to revision.

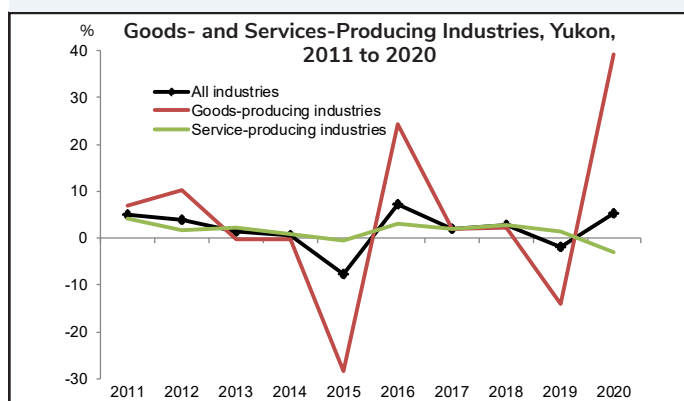

GDP is one of the primary economic indicators used by decision-makers within the governments and financial and other institutions to evaluate the health of the economy. A large increase in real GDP is interpreted as a sign that the economy is doing well, while a small or negative increase indicates poor economic performances.

### Growth Rates of GDP by Industry (based on real GDP in chained (2012) dollars)

**Note:** The current calculation of GDP is based on the input-output structure of the economy in 2018 (benchmark year). Substantial revisions in subsequent years can occur due to updated benchmark year. Please see endnote 2 on page 8.

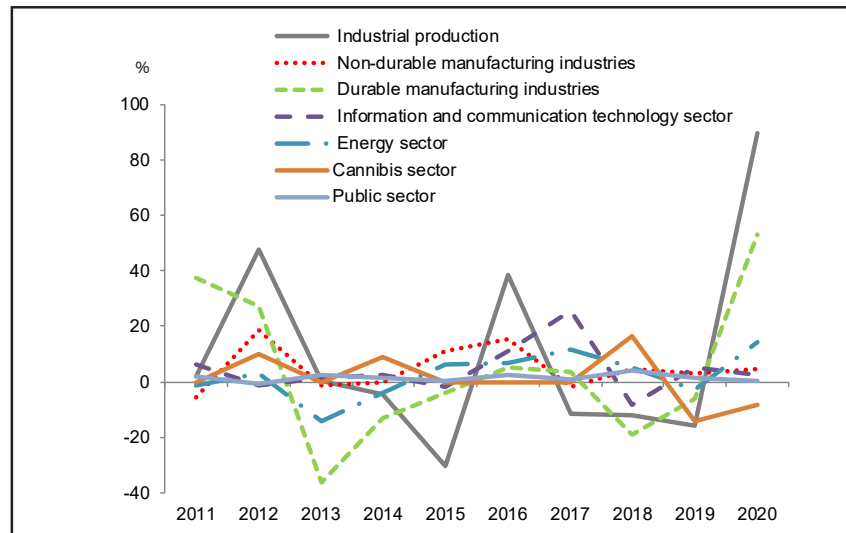

Over the 10-year period from 2011 to 2020, the growth rate of Yukon's GDP by industry varied from a low of -7.6% in 2015 to a high of 7.2% in 2016. In the first 2 years of the 10-year period (2011 and 2012), Yukon's GDP by industry (at basic prices) grew at a high rate of 4.9% to 4.0%, respectively. The growth rate tapered off in 2013 and 2014, dropped to -7.6% in 2015, and then bounced back to 7.2% in 2016. The GDP (at basic prices) grew at a rate of 2.0% in 2017, 2.7% in 2018, -2.0% in 2019, and at a rate of 5.2% in 2020.

Between 2011 and 2020, the GDP growth rate for the Goods-producing industries fluctuated considerably (from -28.3% in 2015 to 39.1% in 2020) due mainly to activities in the Mining, quarrying, and oil and gas extraction sector. However, the GDP growth rate for the Services-producing industries fluctuated within a relatively narrow margin (from -3.0% in 2020 to 4.2% in 2011) over the same period.

### Endnotes:

<sup>1</sup> Statistics Canada uses the chain Fisher volume index method of calculating the real GDP. This method was adopted as it produces the most accurate measure of growth in GDP and its components, and the change brings the Canadian measure in line with the US quarterly Income and Product Accounts which also use the chain Fisher formula to measure real GDP.

An important consequence of using chain indexes is that the associated volume measures are not additive. That is, the sum of the chained values for each component of an aggregate does not equal the chained value of the aggregate. For example, the sum of the components of the Transportation & Warehousing Industry is not equal to the number given for that industry, just as the sum of the individual industry sectors is not equal to the number given for All Industries.

For more information on chain indexes, visit: [https://www.ic.gc.ca/eic/site/cis-sic.nsf/eng/h\\_00005.html](https://www.ic.gc.ca/eic/site/cis-sic.nsf/eng/h_00005.html)

<sup>2</sup> The most recent benchmark year for which the input-output structure of Yukon's economy is measured is 2018 and therefore it is the most current year for which the contributions of different industries to GDP may be accurately measured. GDP calculations for subsequent years are projections based on the structure of Yukon's economy in 2018 and changes in prices and output volumes in intervening years. Substantial revisions to these estimates can occur if there are major changes to the structure of the economy; for example, the opening or closing of a large mine after the most recent input/output accounts reference year.
