

## GDP by Industry, (at basic prices) 2023

### Highlights:

- Yukon's real GDP by industry (at basic prices) in 2023 was \$3,438.7 million (in chained 2017 dollars), an increase of \$59.9 million, or 1.8%, from the revised 2022 figure (\$3,378.8 million).

The GDP of an industry represents the value added by labour and capital in transforming inputs purchased from other industries into output. This analytical report presents Statistics Canada's latest estimates of Yukon's real GDP by industry at basic prices in chained (2017) dollars. Recent figures are subject to revision.

GDP is one of the primary economic indicators used by decision-makers within government, financial and other institutions to evaluate the health of the economy. A large growth in real GDP is interpreted as a sign that the economy is doing well, while a small or negative growth indicates poor economic performances.

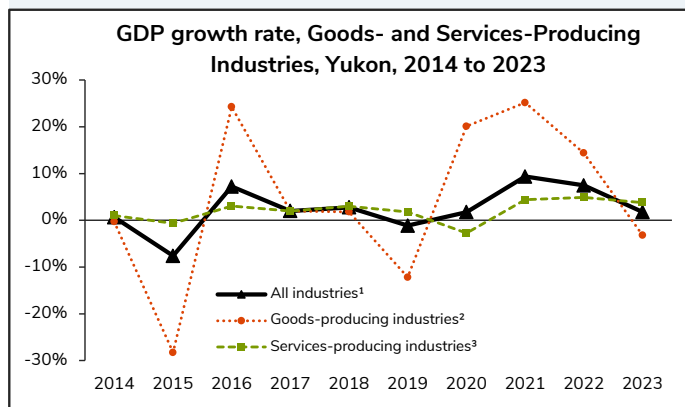

### Growth rates of GDP by industry (based on real GDP in chained 2017 dollars)

**Note:** The current calculation of GDP is based on the input-output structure of the economy in 2021 (benchmark year). Substantial revisions in subsequent years can occur due to updated benchmark year. Please see endnote 2 on page 8.

Over the 10-year period from 2014 to 2023, Yukon's GDP by industry (at basic prices) growth rate varied from a low of -7.6% in 2015 to a high of 9.4% in 2021.

Yukon's GDP by industry (at basic prices) growth rate in 2014 was 0.7% before shrinking in 2015 (-7.6%). In 2016, the growth rate rebounded to 7.2% before slowing down to 2.0% in 2017 and 2.8% in 2018, and then shrinking in 2019 (-1.1%). ### Endnotes:

<sup>1</sup> Statistics Canada uses the chain Fisher volume index method of calculating the real GDP. This method was adopted as it produces the most accurate measure of growth in GDP and its components, and the change brings the Canadian measure in line with the US quarterly Income and Product Accounts which also use the chain Fisher formula to measure real GDP.

An important consequence of using chain indexes is that the associated volume measures are not additive. That is, the sum of the chained values for each component of an aggregate does not equal the chained value of the aggregate. For example, the sum of the components of the *Transportation & Warehousing Industry* is not equal to the number given for that industry, just as the sum of the individual industry sectors is not equal to the number given for *All Industries*.

For more information on chain indexes, visit: [https://www.ic.gc.ca/eic/site/cis-sic.nsf/eng/h\\_00005.html](https://www.ic.gc.ca/eic/site/cis-sic.nsf/eng/h_00005.html)

<sup>2</sup> The most recent benchmark year for which the input-output structure of Yukon's economy is measured is 2021 and therefore it is the most current year for which the contributions of different industries to GDP may be accurately measured. GDP calculations for subsequent years are projections based on the structure of Yukon's economy in 2021 and changes in prices and output volumes in intervening years. Substantial revisions to these estimates can occur if there are major changes to the structure of the economy; for example, the opening or closing of a large mine after the most recent input/output accounts reference year.
