Introduction

The Alaska Highway is Born

Since the early 20th century various schemes were considered for the construction of roads, trails or railways to link the Yukon, northern British Columbia and Alaska to the “outside.” These schemes were motivated by economic interests, including mining, lumber and tourism concerns. During the 1920s and 1930s a small but vocal group of “builders” began to campaign for a highway, either a coastal or inland route, to improve the northwest’s economic base.

With the impending threat of war in the late 1930s, there was an increasing awareness by the American and Canadian governments of the vulnerability of the Pacific Coast to both air and sea attacks by “unfriendly” nations. In 1939, the Northwest Staging Route (NWSR) was surveyed by the Canadian Department of Transportation with the view towards improving the existing airfields for year round use between Edmonton and Fairbanks, and meeting increasing military needs.

The unexpected bombing of Pearl Harbour in December 1941 stimulated interest in the construction of the Alaska Highway by the American government. The U.S. Army Corps of Engineers selected a route based on the location of the NWSR airfields and the military needs for an alternative land route to Alaska for defence purposes. The military was not interested in developing or planning a highway for the civilian needs of the future.

The chosen route ran from Edmonton to Whitehorse, then on to Fairbanks. The U.S. Army and U.S. Public Roads Administration (PRA) roughed out a “pioneer” road in eight months in 1942; the PRA then hired civilian contractors who improved the highway in 1943 and 1944.

During this time the Americans grew increasingly concerned over the lack of petroleum available in the north and the submarine threat to oil tankers transporting fuel on the Pacific Ocean. Thus the Canol project was developed to ensure a continuing supply of petroleum to meet military needs. The end result of the Canol project was a pipeline and road network transporting oil from Norman Wells on the Mackenzie River, Northwest Territories, to Whitehorse, Watson Lake and Fairbanks.

The military need for the Alaska Highway and Canol pipeline declined at the end of World War II. In 1946, Canada officially accepted responsibility for maintaining and developing the Yukon portion of the Alaska Highway.

The Alaska Highway affected both First Nations and non-First Nations peoples immediately. The impacts included an increased awareness of the world outside of the Yukon, imported ideas and technology, improved health care, highway transportation, telecommunications, and the development of more mining and tourist-related industries.

About this Bibliography

Yukon Archives has collected a wealth of original documentation on the planning, construction and socio-economic impacts of the Alaska Highway. This bibliography presents an overview of this collection.

This bibliography has been arranged into seven general themes: historical background, military and civilian governance, personal narratives, photographs and pictorial works, socio-economic impacts, special events and the Canol project. Within these subject areas full bibliographical descriptions are divided by type of material. Subject and author/fonds/collection indexes provide further aid in finding specific material.

Various types of material are included in the bibliography:

- Books — published material;
- Corporate Records — records of various businesses, organizations and associations;
- Government Records — records of the governments of Yukon, Canada and the United States;
- Manuscripts — private papers of individuals and families, including diaries, correspondence and scrapbooks;
- Maps and Plans — original diagrams, maps and sketches;
- Pamphlets — excerpts from journals and magazines, published promotional literature, poetry, and special events souvenirs (menus, invitations and opening ceremony programs);
- Photographs — photographs taken by private individuals and professionals;
- Posters — promotional materials, bills, broadsides and placards;
- Sound Recordings — oral history recordings, radio broadcasts and conference proceedings; and
- Videos — home movies, professional documentary films and videotapes.

1. Historical background

1.1 Description and travel

Although the Alaska Highway's utility for military defence was questionable, the road was well travelled. In 1943 alone, approximately 17,000 government, civilian and commercial vehicles used the highway. This number could not begin to equal the vast amount of civilian traffic that began even before the war ended. Personal accounts of the "adventure road" were published as early as 1944. Descriptive accounts of travelling the highway are listed below.

1.4 Information Services

Tourism played an important role in the Yukon Territory’s economy as the Alaska Highway became known throughout North America. Those seeking the “last frontier” could now drive their own vehicles. When civilian and government groups began offering tourist services along the route, promotion of the highway and tourist services began in earnest. Today, tourism makes up a significant portion of the Yukon Territory’s economy.

2.1 Design and Construction

Between March and November 1942, a pioneer road was completed from Dawson Creek, British Columbia to Delta, Alaska by the U.S. Army Corps of Engineers and the U.S. Public Roads Administration (PRA). Construction continued until the end of 1944 as the PRA and many civilian construction companies developed the pioneer road into a 26-foot-wide “all-weather gravel surfaced road.” Those working on the construction had to endure insects, extremes of cold and heat and other inconveniences as well as deal with the engineering problems caused by ice and permafrost, muskeg bogs and unpredictable streams and rivers. The following list of references reflects some of the concerns, hardships and successes of the construction period.

2.2 Maintenance and Repair

The problems of the Alaska Highway did not end with the completion of construction. Severe maintenance difficulties continued to plague the highway and still do today. Dust in summer, icing in winter, flooding in spring: these are some of the challenges that have been met by the maintenance crews.

In 1946 maintenance responsibilities were passed to the Canadian Army. In 1964 they were transferred to the federal Department of Public Works. In 1972 maintenance responsibilities were transferred to the Yukon Government, where they remain today.

The following sources detail the challenges of maintaining the Alaska Highway.

2.3 Planning

Planning the highway that would link Alaska to the “lower 48” states began in the 1920s and 1930s. Three routes were considered, none of which were the choice eventually favoured by the U.S. Army. The project was initially considered by the Permanent Joint Board on Defense, which unanimously agreed that its military value was “negligible.” The bombing of Pearl Harbour in December 1941 brought the United States into the war, however, and the need for a land link to Alaska gained in importance.

In mid-March 1942, Canada and the United States signed a formal agreement for the building of the Alaska Highway. By this time the U.S. Army Corps of Engineers had surveyed routes and soldiers had already arrived to begin construction.

Some of the items which are relevant to the planning and surveying period are listed below.

3. Personal Narratives

Robert Seaton was a member of C Company, 18th Combat Engineers, and was involved with construction of the Alaska Highway in the Kluane Lake Region, from May, 1942 to January, 1943. During this period he wrote a diary documenting conditions in the construction camps and the lives of the work crews. Yukon Archives. Robert Seaton fonds, 82/225, MSS 40.

3. Personal Narratives

Many of the thousands of people who worked, lived or travelled the Alaska Highway have written accounts of their adventures or daily lives. Some are humorous, some sad; all are rife with fascinating detail and information.

5. Socio-economic Impacts

The Alaska Highway had immediate and long-term impacts on the social, economic and environmental concerns of the people living in the Yukon, British Columbia and Alaska. In 1942, communities experienced a massive influx of people, with all the benefits and problems that go along with a “boom” period. The creation of a major transportation corridor changed the ability to move people and goods in and out of the Yukon. New communities dedicated to the maintenance of the highway were located along its route. Whitehorse became more prominent because of its proximity to the highway. Inevitably, Dawson City’s role as the centre of Yukon activity and administration was diminished.

7. Canol Project

At the height of the frenzied wartime construction during 1942, another project was begun in northwestern Canada. Canol, short for Canadian Oil, was a pipeline system intended to provide fuel for the Alaska Highway and the Northwest Staging Route. The oil field at Norman Wells in the Northwest Territories' Mackenzie Valley would produce crude oil; this was to be transported through a pipeline from Norman Wells to Whitehorse, where an oil refinery was built. The original Canol project grew to include six separate projects (although Canol 5 was never approved or completed):

Canol 1 – Norman Wells to Whitehorse road, pipeline and telephone lines

Canol 2 – Skagway to Whitehorse pipeline

Canol 3 – Whitehorse to Fairbanks pipeline

Canol 4 – Whitehorse to Watson Lake pipeline

Canol 5 – Fairbanks to Nenana pipeline

Canol 6 – Peace River to Norman Wells winter trail to transport supplies and equipment necessary for Canol 1

The Canol project took longer than expected to construct and its cost, originally estimated at \$25,000,000, escalated to more than five times that figure. Oil flowed for only a year, ending in March 1945. Afterwards, the pipeline and refinery were dismantled and sold. Today, all that remains is the Canol Road, built to construct and service the pipeline.
