INTRODUCTION TO VOLUME TWO

Both Volume One of "Hydrocarbon Development: a Yukon Perspective" and this second volume were funded under the federal government's Northern Oil and Gas Action Program (NOGAP). NOGAP was established in 1984 to implement a federal/territorial government socio-economic, environmental and technical research and planning program to support regulatory, policy and program responsibilities and to achieve a state of readiness for northern hydrocarbon production. This Yukon Archives NOGAP project is designed to acquire, catalogue and make available here in Yukon, research reports and other literature associated with northern hydrocarbon development, particularly related to the Beaufort Sea, as it impacts on Yukon. The compilation of this annotated bibliography of the Beaufort Sea collection for use by researchers, members of the business community, special interest groups, and the general public, is an integral part of the project.

1988 is expected to be an historic year in the development of Canada's Beaufort Sea region, as Gulf Canada Resources and partners begin commercial oil production from the 800 million barrel Amauligak field. Oil will be produced from a caisson-retained island, 182 metres long and 120 metres wide consisting of prefabricated barges sitting on an undersea hill of dredged sand, and will be shipped by tanker via the Bering Strait.

Two other events brought the Beaufort area into sharp focus recently. One is the controversial proposal to issue oil exploration licences in Alaska's Arctic Wildlife Refuge, calving ground of the Porcupine caribou herd. The other is the signing of a major agreement allowing oil and gas exploration in the Mackenzie Valley for the first time since the moratorium imposed following the Berger inquiry more than a decade ago. Volumes One and Two of Hydrocarbon Development, a Yukon Perspective are a current and comprehensive source of information on these topics. The publication of Volume Two is timely as it coincides with a period of rising optimism about the resource potential of the Beaufort Sea area and increasing co-operation between industry, governments and native groups in the area.

Since the publication of Volume One of the bibliography, many new items have been added to the Beaufort Sea collection. Volume Two has been compiled as a companion to Volume One to provide a bibliographic survey of, and access to, the vast amount of information related to northern hydrocarbon development located in the Yukon Archives. The geographic emphasis remains Yukon and the Beaufort Sea, but material dealing with the Northwest Territories and Alaska, as well as some east coast exploration and production material is also included where it is relevant. This material makes it possible to draw analogies between developments elsewhere in Canada.

Contained in the bibliography are entries for both published and unpublished works held in the Yukon Archives, including monographs, articles in books, government, consultant, and corporate reports, and conference, workshop and symposium proceedings. As with Volume One, time limitations did not permit the inclusion of serials, periodicals, newspapers or, with very few exceptions, pamphlets.

The 911 entries in the bibliography have been grouped alphabetically by title within a series of broad subject categories, as shown on page i. Each category is identified by a letter while individual entries within each category are numbered sequentially. Entries are not intended to present a critique of a particular work but rather to provide a brief description in terms of intent, content, and targetted audience. While the subject categories are broad and largely self-evident, a few points should be noted. Because of its extent, Category A, Environment, is broken down into seven sub-categories; the first of these, General, includes those works dealing with environmental protection and miscellaneous environmental issues. Oil spill countermeasures are found in Category D, Technology when the content is concerned with the technological aspects of the subject but are found in Category A, Environment, sub-category 6 - Oil Pollution when the entry is more concerned with the environmental aspects. Category F, Government, includes pipeline inquiries, environmental assessment panels and reviews, regulatory bodies, and legislation, as well as government policy and perspectives on northern hydrocarbon development. Works dealing with the issues, problems and potential of northern energy development in the broad context are found in Category E, Northern Energy Development. Because a work is assigned only to a single category, this assignment may be somewhat arbitrary so the reader

is advised not to limit searching in the index to one keyword or phrase but rather to look for variants of the word or term that relate. Cross references are included in the keyword index where deemed useful.

The keyword index and list of abbreviations have both been expanded for Volume Two. The keyword index appears on page 521, the list of abbreviations on page ix. A personal author index is found on page 479 and a corporate author and/or publisher index on page 507.

This bibliography was compiled by Mary Rae Raines under the direction of Sally Bremner, Beaufort Sea Librarian. Word processing was done by Marlene Bovy.

SAMPLE ENTRIES

citation no. → B 41 title of book → OLD CROW, Y.T., AND THE PROPOSED NORTHERN GAS PIPELINE.
author of book → J.K. Stager.
series → Environmental-Social Program Northern Pipelines, Task Force on Northern Oil Development, Report No. 74-21.
place published → Ottawa : Environmental-Social Committee Northern
publisher/distributor → Pipelines, 1974. 233 pp.
call no. → 330.971 ESCNP 74-21 ← date ← no. of pages

annotation → This study assesses and states conclusions related to the consequences of building and operating a trunk gas pipeline through the northern Yukon upon the social and economic life of the people of Old Crow, Y.T. The cultural and historical background of Old Crow, recent changes, and the pipeline project and its effect are discussed in detail. A summary and bibliography are included.

subjects under which item is indexed → Old Crow, Yukon / Yukon, northern / customs / native peoples / employment / pipelines / local business / social conditions / social services / socio-economic impacts

citation no. → D 56 title of article → "Alaskan Beaufort Sea Oilspill Response Body."
author of article → A.A. Allen.
title of book → In OIL, ICE AND GAS: PROCEEDINGS OF A WORKSHOP HELD IN TORONTO, OCTOBER 10-11, 1979.
editor of book → edited by D. Mackay and S. Paterson.
place published → Toronto : Institute for Environmental Studies,
publisher/distributor → University of Toronto, 1979. pp. 129-133.
call no. → 333.823 Oil ← date ← pages

annotation → This is a brief description of the Alaskan Beaufort Sea Oilspill Response Body (ABSORB), a joint venture established on March 1, 1979 by 13 oil companies interested in offshore exploration and development activities off the North Slope of Alaska.

subjects under which item is indexed → Alaskan Beaufort Sea / oil spill countermeasures / blowouts / oil pollution / Arctic / sea ice / technology

citation no.	→	G 5	title of book	→	WRITTEN ARGUMENT TO THE NATIONAL ENERGY BOARD.
corporate author	→	Canadian Arctic Gas Pipeline Limited.			
place published	→	s.l. : s.n., n.d.	2 vol.		
publisher/distributor	→		date	←	no. of volumes
call no.	→	330.971 99	CAGPL		

annotation → This written argument was filed on behalf of CAGPL in its application for authority to construct and operate a pipeline to transport gas from Alaska to southern markets. Volume I details route selection, pipeline design, geotechnical consideration, construction, operations and costs. Volume II details socio-economic and environmental considerations, reserves, markets and comparisons of the competing projects.

subjects under which item is indexed → CAGPL / NEB / pipelines / Alaska / pipeline design / pipeline construction / pipeline financing / energy reserves

ENVIRONMENT

GENERAL

- A 1 ALASKA HIGHWAY GAS PIPELINE PROJECT. ENVIRONMENTAL CONCERNS AND RECOMMENDATIONS OF THE YUKON WILDLIFE BRANCH.
Yukon. Yukon Wildlife Branch.
[Whitehorse, Yukon] : Yukon. Government of Yukon, 1977. 159 pp.

333.720 971 91 YTGw

This document expresses the concern of the Yukon Wildlife Branch that insufficient consideration was given, by the National Energy Board (NEB) and Foothills Pipelines (Yukon) Ltd. (FPL(Y)), to the environmental impact of pipeline development on some wildlife species. The report, compiled for presentation to the Alaska Highway Gas Pipeline (AHGP) project Environmental Assessment and Review Panel (EARP), identifies potential wildlife problems arising from the pipeline impact. As well, aspects of wildlife behavior which make a species particularly vulnerable are outlined in this comprehensive report.

Yukon Territory / YTG / environmental impact / pipelines / NEB / FPL(Y) / AHGP / EARP / moose / caribou / sheep / goats / bears / bears, grizzly / fur-bearers / mammals / wolf / birds

- A 2 ALASKA HIGHWAY GAS PIPELINE TECHNICAL HEARINGS, JUNE 7-12, 1982: FINAL REPORT OF THE ENVIRONMENTAL ASSESSMENT REVIEW OFFICE.
Alaska Highway Gas Pipeline Environmental Assessment Panel.
Federal Environmental Assessment and Review Process ; 21.
Hull, Quebec : Federal Environmental Assessment Review Office, 1982.
28 pp.

330.971 91 EAPt

This report presents the conclusions and recommendations of the Environmental Assessment Panel (EAP) following a review of information submitted by Foothills Pipe Lines (South Yukon) Limited (FPL(Y)) as addenda to the company's 1979 Environmental Impact Statement (EIS) for the Alaska Highway Gas Pipeline (AHGP).

- A 3 ALASKA HIGHWAY GAS PIPELINE YUKON HEARINGS, MARCH-APRIL 1979: REPORT OF THE ENVIRONMENTAL ASSESSMENT PANEL.
Alaska Highway Gas Pipeline Environmental Assessment Panel.
Federal Environmental Assessment and Review Process ; 10.
Ottawa, Ontario : Federal Environmental Assessment Review Office,
1979. 61 pp.

330.971 91 EAPy

This document was prepared by the Alaska Highway Gas Pipeline (AHGP) Environmental Assessment Panel (EAP) for submission to the Federal Environmental Assessment Review Office (FEARO). The report outlines the information deficiencies identified in the Environmental Impact Statement (EIS) submitted by Foothills Pipe Lines (South Yukon) Limited (FPL(SY)) in support of their proposal to construct the Yukon section of the AHGP.

AHGP / EIS / FEARO / EAP / FPL(SY) / pipeline construction / pipeline routes / geotechnology / hydrology / revegetation / fisheries / wildlife / land use / pollution, noise / erosion / pollution / pipeline crossings / environmental impact / environmental assessment / public hearings

- A 4 THE ALASKAN ARCTIC COAST: A BACKGROUND STUDY OF AVAILABLE KNOWLEDGE.
Arctic Institute of North America, Alaska Office.
Anchorage, Alaska : Arctic Institute of North America, Alaska Office,
1974. 551 pp.

333.917 1 Arc

Prepared for the Corps of Engineers, U.S. Army, this report studies the environment of the Alaskan Arctic coastal zone and the potential impact of oil exploration and development activities. The scope of this study is extensive and both the environment and the socio-economic situations along the Alaska coast are examined in considerable detail. The text of the report has been kept fairly brief and charts and tables are used to present information. A selected bibliography is provided.

- A 5 THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. 466 pp.

551.468 7 Ala

This volume contains a collection of articles which highlight recent studies on the Alaskan Beaufort Sea environment and ecosystems. The theme of these articles is the need for environmental research designed to pinpoint problem areas and ensure safe exploitation of hydrocarbon resources. Each article in the volume includes a list of references and a general index is provided.

- A 6 ANALYSIS OF ENVIRONMENTAL PROTECTION ACTIVITIES FOR THE ALASKA HIGHWAY GAS PIPELINE PROJECT.
Canada. Environmental Impact Control Directorate and the Pacific and Northwest Regions.
Canada. Environmental Protection Service. Policy and Planning Report EPS-2-EC-77-1.
Ottawa, Ontario : Canada. Environmental Protection Service, 1978.
32 pp.

330.971 9 EPS

This document records the analyses made to determine resources necessary to achieve adequate environmental protection on the Alaska Highway Gas Pipeline Project (AHGP). The schedules of activities for Foothills Pipe Line (Yukon) Ltd. (FPL(Y)) and the Northern Pipeline Agency are assessed as well as the probable requirements in numbers of people needed and the time schedule for conducting the environmental assessment. The contents of this document relate to the entire pipeline project from the Alaska-Yukon border to the 49th parallel.

AHGP / FPL(Y) / Northern Pipeline Agency / environmental assessment / Alaska / Yukon Territory / pipelines / pipeline routes / environmental protection

A 7 ANNUAL REPORT OF THE ENVIRONMENTAL COORDINATOR FOR THE SHAKWAK HIGHWAY PROJECT.

Richard B. Spencer.

Whitehorse, Yukon : Canada. Department of Public Works and U.S. Department of Transportation, Federal Highway Commission, 1979. 127 pp.

333.772 Spe

The Shakwak Highway Project is the name given to the joint Canadian/U.S. proposal to pave the Canadian section of the Haines Road and the Alaska Highway from Haines Junction north to the Alaska border. This is the second annual report of the Environmental Coordinator and it provides information on the current status of construction, design studies, and, specifically, the status of all ongoing environmental protection programs relative to the project. The major portion of this report itemizes environmental commitments identified in the project's Environmental Impact Statement (EIS) and then provides a detailed data sheet on each commitment. A list of references cited is provided and photographs appear throughout.

A 8 "Arctic Marine Environmental Studies."

Allen R. Milne.

In PROCEEDINGS OF THE EIGHTH ARCTIC ENVIRONMENTAL WORKSHOP, FAIRMONT, B.C., MAY 7-9, 1979.

Arctic Petroleum Operators' Association (APOA) and the Canadian Petroleum Association (CPA).

Calgary, Alberta : Arctic Institute of North America, 1979.

pp. 28-43.

333.823 05 Arc 1979

This author defines marine environmental studies as tools which are used to predict natural and man-made changes that could occur during offshore oil and gas operations. Three major study programs are reviewed briefly - those concerning the Beaufort Sea Project (Dome Petroleum); the Eastern Arctic Marine Environmental Studies (Norlands Petroleum, Esso); and the Offshore Labrador Biological Studies (Department of Energy, Mines and Natural Resources). The design of environmental studies is discussed and the environmental assessment and review process is explained. The paper is illustrated, by use of charts and a map, and a list of references is included.

- A 9 "Arctic Marine Resources: Harvest and Utilization Panel."
H.R. Trudeau and G. Glazier.
In PROCEEDINGS OF THE SEVENTH ARCTIC ENVIRONMENTAL
WORKSHOP, FAIRMONT, B.C., APRIL 12-15, 1978.
Arctic Petroleum Operators' Association (APOA) and the Canadian
Petroleum Association (CPA).
Toronto, Ontario : The Institute of Environmental Studies, University
of Toronto, 1978. pp. 86-102.

333.823 05 Arc 1978

The Arctic Marine Resources: Harvest and Utilization Panel's
discussions, at the subject workshop, are the topic of this paper.
The report identifies the panel's objectives - to assess from existing
data the current status of Arctic marine resources, their present
level of harvest, their importance to the people who live in the Arctic
and the expected impact from hydrocarbon exploration and
production. Background study reports and a summary of the panel's
discussions are presented. A short list of references is included.

- A 10 ARCTIC NATIONAL WILDLIFE REFUGE COASTAL PLAIN RESOURCE
ASSESSMENT. FINAL REPORT BASELINE STUDY OF THE FISH,
WILDLIFE AND THEIR HABITATS.
edited by Gerald W. Garner and Patricia E. Reynolds.
Anchorage, Alaska : U.S. Department of the Interior. U.S. Fish and
Wildlife Service, 1986. 2 v.

333.710 979 87 ANWR

This two volume set contains the final report of a baseline study conducted under the provisions of the Alaska National Interests Lands Conservation Act of 1980, section 1002 - Arctic National Wildlife Refuge coastal plain assessment. The study area is a portion of the northern coastal plain and foothills of the wildlife refuge covering approximately 630,000 hectares, including some 135 km of Beaufort Sea coastline, and bordered on the east by the Yukon Territory. This extensive report provides a study of fish and wildlife, with specific emphasis on caribou, wolves, wolverines, grizzly bears, migratory waterfowl, muskoxen, and polar bears. The size, range and distribution of the populations as well as the extent, location and carrying capacity of the fish and wildlife habitats are assessed. The impacts of natural processes and human activities, including the potential impacts of hydrocarbon exploration and production on fish, wildlife, and their habitats, and on the culture and lifestyle of affected native and other residents, are analysed. Many maps, charts and photographs are included and each of the eight chapters provides a list of literature cited.

- A 11 BEAUFORT EARP HEARINGS 1983: PARTICIPANTS, STATEMENTS AND COMMENTS ON KEY TOPICS AND ISSUES.
Canada. Department of Indian Affairs and Northern Development, Public Review Group, Northern Policy and Coordination.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, Public Review Group, Northern Policy and Coordination, 1984. 193 pp.

333.823 I DIAND Com

This volume is a compendium of comments by participants at the Beaufort Sea Environmental Assessment and Review Panel (BSEARP) hearing pursuant to the Dome/Gulf/Esso proposal for hydrocarbon development in the Beaufort Sea. It is the intent of this document to provide a reference aid to the voluminous transcripts of the hearings and to be used as an aid for future planning. This volume does not cover every topic discussed; rather, key issues have been identified and are included here.

Dome / Gulf / Esso / DIAND / BSEARP / Beaufort Sea / northern energy development / environmental assessment / environmental impact / pollution, oil / socio-economic impacts / public hearings / native peoples / wildlife / fish / mammals, marine / wildlife habitats / pollution, noise / caribou, Porcupine / bears

A 12 BEAUFORT ENVIRONMENTAL MONITORING PROJECT 1984-85 FINAL REPORT.

ESL Environmental Sciences Ltd. et al.
Vancouver, British Columbia : ESL Environmental Sciences Ltd., 1985. 162 pp.

333.823 1 ESL

The Beaufort Environmental Monitoring Project (BEMP) was initiated by the Department of Indian Affairs and Northern Development (DIAND) and Environment Canada (DOE). The program's purpose is to provide the technical basis for the design, operation and evaluation of a comprehensive environmental research and monitoring program to accompany phased hydrocarbon development in the Beaufort Sea. This unpublished document is the report of the activities during the second year of the project and contains recommendations for future environmental studies.

Beaufort Environmental Monitoring Project / DIAND / DOE / environmental monitoring / Beaufort Sea / environmental protection / hydrocarbon production / exploration / mammals, marine / bears, polar / seabirds / fish / operations / transportation

A 13 BEAUFORT ENVIRONMENTAL MONITORING PROJECT 1985-1986 FINAL REPORT.

LGL Limited et al.
Canada. Department of Indian Affairs and Northern Development. Environmental Studies No. 40.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1987. 199 pp.

333.823 1 LGL 1985/86

This document presents the report of Beaufort Environmental Monitoring Project (BEMP) activities during the third year (1985-86) of the project including: a review of relevant studies initiated or completed since December 1984; preparation of project overviews describing the purpose of these investigations; the conduct of a workshop on bowhead whales; and research and discussion on oil-based drilling fluids. Recommendations for future environmental studies in relation to bowhead whales are included and references are provided. See previous entry for project background, and 1984/85 report.

- A 14 "The Beaufort Sea: Background, History and Perspective."
David Norton and Gunter Weller.
In THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 3-19.

551.468 7 Ala

This paper describes the characteristics and history of the Beaufort Sea region, with emphasis on the area between Point Barrow, Alaska and the Canadian border. The authors describe the regional setting, including governance and ownership patterns, ecology, topography, oceanography and wildlife patterns. In discussing the history of the region, the authors look back to the Tareumiut people, who have occupied the northern Alaska coast for at least 2000 years, the influence of western culture and the effects of hydrocarbon exploration and production on the people and their environment. Photographs and diagrams illustrate this paper and a list of references is provided.

PRELIMINARY SUMMARY REPORT FOR WORKSHOP II.
Canada. Department of Indian Affairs and Northern Development,
Environmental Studies Division.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern
Development, 1983. 72 pp.

333.823 1 DIAND BEMP II

This report briefly summarizes the results of the second workshop in the Beaufort Environmental Monitoring Project (BEMP), for submission to the Beaufort Sea Environmental Assessment and Review Panel (BSEARP). The primary objective of this workshop was to establish preliminary research and monitoring priorities, through a detailed, interdisciplinary examination of twenty-one hypotheses regarding the potential impacts of hydrocarbon development on the ecosystem components of the Beaufort Sea. This preliminary document summarizes the hypotheses, conclusions, and proposed research and monitoring.

- A 19 BEAUFORT SEA HYDROCARBON PRODUCTION PROPOSAL; INTERIM REPORT OF THE ENVIRONMENTAL ASSESSMENT PANEL TO THE FEDERAL ENVIRONMENTAL ASSESSMENT REVIEW OFFICE.
Canada. Federal Environmental Assessment Review Office.
Canada. Federal Environmental Assessment and Review Process ; 19.
Hull, Quebec : Canada. Federal Environmental Assessment Review Office, 1982. 12 pp.

333.823 163 27 Fed

This interim report summarizes the progress of the Beaufort Sea Environmental Assessment Panel (BSEAP) in its consideration of Dome, Gulf and Esso's Beaufort Sea hydrocarbon production and transportation proposal. Under the auspices of the Federal Environmental Assessment and Review Office (FEARO), all proposed projects involving federal money or property, that are likely to have significant environmental effects, must be submitted to an environment assessment panel for review. It is reported that the BSEAP's main activity has involved the establishment of guidelines to assist Dome, Gulf and Esso in their preparation of an environmental impact statement (EIS) and public hearings in this regard are reviewed. The major concerns raised are detailed and the report concludes by outlining the BSEAP's planned future activities.

MF AEIDC

Prepared for the U.S. Army, Corps of Engineers, this bibliography contains 130 citations, arranged alphabetically by author surname, listing environmental publications dealing with biological, social, and economic aspects and environmental engineering studies relative to the Arctic coast and the Beaufort and Chukchi Seas. The entries are not annotated.

- A 23 THE BIOLOGICAL EFFECTS OF HYDROCARBON EXPLORATION AND PRODUCTION RELATED ACTIVITIES, DISTURBANCES AND WASTES ON MARINE FLORA AND FAUNA OF THE BEAUFORT SEA REGION.
ESL Environmental Sciences Ltd.
Beaufort EIS Support Document 1982.
Vancouver, British Columbia : ESL Environmental Sciences Ltd., 1982. 450 pp.

574.928 ESL

Prepared for Dome Petroleum Ltd., this support document summarizes existing information on the potential biological effects of activities, disturbances and wastes associated with hydrocarbon exploration and production. The primary emphasis of the report is on the biological resources of the Beaufort Sea region. Major sections of the report discuss common disturbances and disturbances associated with exploration and production drilling, storage and transportation, environmental emergencies and clean-up procedures. Each major section includes a list of references and a summary of the content of the section.

zooplankton / phytoplankton / benthic invertebrates / mammals, marine / seabirds / fish / biology, aquatic / pollution, oil / pollution, noise / drilling / Beaufort Sea / exploration / hydrocarbon production / transportation, marine / environmental impact / dredging / waste disposal / drilling fluids / blowouts / Dome / oil spills / dispersants / artificial islands / aquatic habitats / EIS

- A 24 BIOLOGICAL OVERVIEW OF THE BEAUFORT SEA AND N.E. CHUKCHI SEA.
LGL Limited, Environmental Research Associates and ESL Environmental Sciences Limited.
Beaufort EIS Support Document 1982.
Vancouver, British Columbia & Toronto, Ontario : LGL Limited and ESL, 1982. various pag.

574.971 9 Bio

Dome Petroleum commissioned a series of background studies, to document the resources of the areas that might be affected by activity in the Beaufort Sea, as a first step in evaluating the environmental impact of oil and gas reserve development. This particular report provides an overview of the biological resources of the Beaufort and northeastern Chukchi seas. It is restricted to the known biological resources of marine areas, including Amundsen Gulf, to provide data for potential transportation routes. Illustrations are used throughout and each of the ten sections includes a list of references cited.

EIS / Beaufort Sea / Chukchi Sea / Dome / mammals, marine / birds / fish / plankton / ecosystems, aquatic / Alaska / biology, aquatic / ecology, marine / Amundsen Gulf, N.W.T. / natural gas / exploration / hydrocarbon production / ice, sea / environmental monitoring / transportation

A 25 BIOLOGICAL OVERVIEW OF THE NORTHWEST PASSAGE, BAFFIN BAY AND DAVIS STRAIT.

LGL Limited Environmental Research Associates.

Beaufort EIS Support Document 1982.

Toronto, Ontario : LGL Limited, 1982. various pag.

574.971 9 Bio

One of several studies commissioned by Dome Petroleum, this report provides an overview of the biological resources in the Northwest Passage, Baffin Bay and Davis Strait. The report describes the characteristics of the major biological components in the area but does not evaluate the potential impacts of the transportation plan, which would see ice-breaking oil tankers in operation year round. Considerable use is made of illustrations and eight of the ten main sections include a list of literature cited.

EIS / Dome / Northwest Passage / Baffin Bay, N.W.T. / Davis Strait, N.W.T. / mammals, marine / mammals / birds / fish / plankton / ice, sea / biology, aquatic / ecology, marine / ecosystems, aquatic / ducks / environmental monitoring

A 26 COMPREHENSIVE BIBLIOGRAPHY AND INDEX OF ENVIRONMENTAL INFORMATION FOR THE BELUGA-SUSTINA, NENANA, AND WESTERN ARCTIC COAL FIELDS, VOLS. I, II, III.

Eugene H. Buck, et al., Arctic Environmental Information and Data Center (AEIDC).

Anchorage, Alaska : University of Alaska, 1978-1979. 9 microfiche.

MF AEIDC

Presented in three volumes, this bibliography and index was compiled to provide increased access to environmental information pertinent to three major coal-producing areas in Alaska. Each volume contains seven sections: I, master bibliography containing the complete citation in accession number order; II, author index; III, geographic index; IV, maps of areas covered by the geographic index; V, earth sciences index; VI, biological index; VII, general keyword index.

AEIDC / bibliographies & indices / Alaska / coal / energy alternatives / environmental protection / botany / biology / ecology / geology / archaeology / geomorphology / Beluga-Sustina Coalfields, Alaska / Nenana Coalfield, Alaska / stratigraphy

- A 27 CURRENT RESEARCH PROFILE FOR ALASKA 1983 AND 1984.
Arctic Environmental Information and Data Center (AEIDC).
Anchorage, Alaska : Arctic Environmental Information and Data Center, 1983, 1984. various pag.

500.979 807 2 Arc

This annual publication lists research conducted annually, in Alaska, in the physical, biological and related social sciences. Abstracts of Alaska research and research projects conducted in Canada, but relevant or applicable to Alaska, are included. The volume provides six indices - researcher name, affiliation, funding agency, subject, region and geographic location.

Alaska / bibliographies & indices / geophysics / geology / biology / socio-economic aspects / technology / northern energy development / archaeology / health care / education / land use / AEIDC

- A 28 [DEMPSTER LATERAL APPLICATION: CONSULTANTS' PROPOSALS FOR TECHNICAL SUPPORT STUDIES, SERVICE AGREEMENTS AND RELATED CORRESPONDENCE].
Foothills Pipe Lines (Yukon) Limited.
Calgary, Alberta : Foothills Pipe Lines (Yukon) Limited, 1978. various pag.

330.971 91 FPL(Y)

This loose-leaf volume contains copies of fourteen documents relative to Foothills Pipe Lines (Yukon) Limited's (FPL(Y)) proposal to construct the Dempster Lateral Gas Pipeline. Included are outlines and proposals for technical support studies, service agreements and related correspondence.

FPL(Y) / Dempster Lateral Gas Pipeline / environmental impact / pipeline construction / socio-economic aspects / fisheries / wildlife

- A 29 DEMPSTER LATERAL GAS PIPELINE PROGRESS REPORT NO. 1.
s.l. : s.n., 1978. various pag.

330.971 91 Dem

This volume contains copies of contracts, terms of reference and correspondence relative to various environmental studies conducted in conjunction with the planned Dempster Lateral Gas Pipeline. The specific studies concern the Porcupine caribou herd, revegetation of disturbed terrain, birds, waterfowl and general habitat evaluations.

Dempster Lateral Gas Pipeline / environmental assessment / caribou, Porcupine / waterfowl / revegetation / birds / wildlife habitats / pipelines / pipeline routes / reclamation

- A 30 DRAFT ENVIRONMENTAL IMPACT STATEMENT: PROPOSED BEAUFORT SEA LEASE SALE 97.
U.S. Department of the Interior, Minerals Management Service, Alaska OCS Region.
s.l. : U.S. Department of the Interior, Minerals Management Service, [1987?]. various pag.

333.916 41 MMS

This draft environmental impact statement (EIS) discusses a proposal for oil and gas leasing in the Beaufort Sea Planning Area (approximately 21.2 million acres of Outer Continental Shelf (OCS) lands located in the Beaufort and Chukchi Seas). This extensive document analyses the potential effects of such a proposal on the environment, describes alternatives to the proposal, and presents major issues such as the effects of development on wildlife, fish, marine mammals and their habitats and the socio-economic impact on the peoples of the area. In addition to the main proposal, five alternatives are presented in considerable detail. This report describes the geology, meteorology, oceanography and biological resources of the area and discusses the environmental consequences of hydrocarbon activities, constraints such as sea ice, technology and oil spills under each alternative proposal. Maps are included, as well as tables and diagrams. The document is indexed, a glossary of acronyms is provided, and there is a comprehensive bibliography.

EIS / environmental impact / OCS / Beaufort Sea / Chukchi Sea / fish / birds / seabirds / bears, polar / whales / caribou / native harvest / socio-economic impacts / water quality / land use / recreation / tourism / geology / meteorology / oceanography / exploration / oil spills / pollution, oil / toxicity / ice, sea / resource-leasing / oil spill countermeasures / seals / walrus / pollution, noise / wildlife habitats / aquatic habitats / North Slope, Alaska / ecosystems, aquatic / benthos / nutrition / native peoples / caribou, Porcupine / Inupiat / Kaktovik, Alaska / Barrow, Alaska / Nuiqsut, Alaska / Wainwright, Alaska / hunting / trapping / employment

- A 31 DRAFT TEXT FOR ENVIRONMENTAL SITE SPECIFIC ATLAS, ALASKA HIGHWAY GAS PIPELINE, YUKON SEGMENT.
Interdisciplinary Systems Ltd.
s.l. : Interdisciplinary Systems Ltd., 1978. 266 pp.

665.744 Dra

This draft manuscript provides the explanatory text for the environmental site specific atlas of the Yukon segment of the Alaska Highway Gas Pipeline (AHGP). Conflicts between the project and the environment are identified and recommendations for changes to the planned route are made where necessary. The environmental concerns examined are wide-ranging and comprehensive in nature.

- A 32 EAMES NORTH REPORTS.
[sponsored by] Petro-Canada.
Eastern Arctic Marine Environmental Studies Program.
Calgary, Alberta : Pallister Resource Management Ltd., 1982.
142 MF.

574.509 719 9 Eam

This volume contains the Eastern Arctic Marine Environmental Study (EAMES) reports, in microfiche format, which present data on a wide scope of environmental and ecological aspects of the Baffin Bay and Lancaster Sound regions. Included are biological reports on birds, marine mammals, and the aquatic ecosystem and oceanography and ice reports. There is a list of citations, an abstract for each section of this extensive study, and a subject listing is provided.

- A 33 AN ECOLOGICAL FRAMEWORK FOR ENVIRONMENTAL IMPACT ASSESSMENT IN CANADA.
Gordon E. Beanlands and Peter N. Duinker.
Halifax, Nova Scotia : Institute for Resource and Environmental Studies and Federal Environmental Assessment Review Office, 1983.
132 pp.

574.526 21 Bea

This report is the result of a project to determine the extent to which the science of ecology could contribute to the design and conduct of environmental assessment studies, and to recommend ways in which this could realistically be achieved. The project involved the active participation of environmental scientists and those who are responsible for the administration of assessment procedures in Canada. The report provides the history and background of the project, its findings and the recommendations of the participants. A detailed list of related references is included.

environmental impact / ecology / Arctic / environmental assessment / FEARO / ecology, marine

A 34 ECOLOGY AND ENVIRONMENTAL IMPACT ASSESSMENT: AN ANNOTATED BIBLIOGRAPHY.

Peter N. Duinker and Gordon E. Beanlands.

Halifax, Nova Scotia : Federal Environmental Assessment Review Office and the Institute for Resource and Environmental Studies, Dalhousie University, 1983. 40 pp.

016.5 Dui

This bibliography was prepared as part of a Dalhousie University Research Project on the ecological basis for environmental impact assessment in Canada. The approximately 200 entries in the bibliography are presented as a complement to the study, "An Ecological Framework for Environmental Impact Assessment in Canada" by the same two authors (note: refer to personal author index in this volume for citation). A subject index is included and the entries are arranged in alphabetical order by first author surnames.

environmental impact / environmental assessment / FEARO / ecology / ecology, marine / Arctic / bibliographies & indices

A 35 "Environmental and Performance Monitoring for Offshore Exploration Structures."

B.C. Dixit, G.R. Pilkington and F.J. Eley.

In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION PROCEEDINGS, CALGARY, ALBERTA, NOVEMBER 6-9, 1984.

Calgary, Alberta : Arctic Offshore Technology Conference, 1984. various pag.

665.502 8 Arc 1984

The authors of this paper emphasize the necessity of environmental monitoring to identify factors that would impact on the safety and efficiency of offshore drilling operations. Hazardous conditions, which affect offshore drilling, are described as well as the resulting operational response, using BeauDril's Kulluk system operating in the Beaufort Sea as an example. The instrumentation presently being used to monitor the environment is also described here.

workshops / drilling, offshore / oil rigs / safety measures / waves / ice, sea / environmental monitoring / Beaufort Sea / BeauDril / Kulluk / climatology / ice management / technology

- A 36 "Environmental Aspects of Arctic Marine Transportation and Development."
E.F. Roots.
In MARINE TRANSPORTATION AND HIGH ARCTIC DEVELOPMENT: POLICY FRAMEWORK AND PRIORITIES: SYMPOSIUM PROCEEDINGS, MONTEBELLO, QUEBEC MARCH 21-23, 1979.
s.l. : Canadian Arctic Resources Committee (CARC), 1979.
pp. 69-92.

330.971 9 Mar

In discussing the development and operation of marine transportation systems as an essential component of the future development of Arctic Canada, this author examines industry's state of knowledge and policies as they apply to Arctic regions, specifically in terms of environmental conditions. The distinctive features of the Arctic environment are described, including weather systems, sea ice and icebergs, biological factors and oceanography. The author examines the types of environmental information available and how this information should be used in decision-making relative to Arctic marine transportation.

- A 37 "Environmental Assessment."
P. Solomon.
In PROCEEDINGS OF THE SIXTH ARCTIC ENVIRONMENTAL WORKSHOP, FAIRMONT, B.C., APRIL 17-20, 1977.
Arctic Petroleum Operators' Association (APOA) and the Canadian Petroleum Association (CPA).
Toronto, Ontario : The Institute of Environmental Studies, University of Toronto, 1977. pp. 5-10.

333.823 05 Arc 1977

In this paper, the speaker addresses what he considers is a communications gap, between government and industry, with respect to environmental concerns. He discusses his view that industry has recognized the value of pragmatic environmental impact assessments in the decision making process, but adds that, for national policy, these assessments are the responsibility of government, with input from industry and academic institutions.

A 38

ENVIRONMENTAL ASSESSMENT OF THE ALASKAN CONTINENTAL SHELF. FINAL REPORTS OF PRINCIPAL INVESTIGATORS. VOLUME 7. BIOLOGICAL STUDIES. BEAUFORT SEA BARRIER ISLAND-LAGOON ECOLOGICAL PROCESS STUDIES: FINAL REPORT, SIMPSON LAGOON.

LGL Ecological Research Associates, Inc. and LGL Environmental Research Associates.

s.l. : U.S. Dept. of Commerce. National Oceanic and Atmospheric Administration and U.S. Dept. of Interior. Bureau of Land Management, 1980. 678 pp.

333.916 41 Env v. 7

The subject focus of this study is the geological, oceanographic, and ecological processes that support vertebrate species of primary interest to humans, and that are speculated to be vulnerable to hydrocarbon development activities in the Beaufort Sea. Physical processes studied include formative mechanisms of coastal landforms, water circulation and exchange patterns, and transport and delivery patterns of materials carried by water. Bird species in the coastal environment are discussed in terms of their feeding, resting, molting and nesting habits as well as their vulnerability to human activities. The importance of the anadromous fish species (Arctic and least cisco, Arctic char) and some marine species, including Arctic cod, for human consumption as well as ecological purposes, is defined and there is some discussion on the food web. In general, it is concluded that the nearshore environment of the Beaufort Sea appears to be highly productive and that, based on ecological theory and data from this study, the ecosystem should be extremely resilient to human-induced disturbances. Monitoring programs, to assess the health of the species as opposed to population figures, are recommended as development proceeds.

- A 39 ENVIRONMENTAL ASSESSMENT OF THE ALASKAN CONTINENTAL SHELF. FINAL REPORTS OF PRINCIPAL INVESTIGATORS. VOLUME 8. BIOLOGICAL STUDIES. BEAUFORT SEA BARRIER ISLAND-LAGOON ECOLOGICAL PROCESS STUDIES: FINAL REPORT, SIMPSON LAGOON.

LGL Ecological Research Associates, Inc. and LGL Ltd. Environmental Research Associates.

s.l.: U.S. Dept. of Commerce. National Oceanic and Atmospheric Administration and U.S. Dept. of Interior. Bureau of Land Management, 1980. 359 pp.

333.916 41 Env v. 8

This volume is a continuation of the biological studies final report, volume 7 (see elsewhere in this bibliography). Invertebrate investigations, which were conducted in the Simpson Lagoon to study the seasonal and habitat distributions, abundances, biomasses, and life histories of organisms, identified as important food items for fish and birds, are described and the results discussed in some detail. As well, the production and nutrient aspects of algae, which are the suppliers of new fixed energy and carbon to the marine ecosystem, are examined. The volume concludes with a general discussion of the subject biological studies. Important components and processes are described, an analysis of probable impacts of development is presented, and an environmental monitoring strategy is proposed.

- A 40 ENVIRONMENTAL CODE OF GOOD PRACTICE FOR GAS PIPELINE DEVELOPMENT.

Canada. Environmental Protection Service

Canada. Environmental Protection Service. Regulations, Codes, Protocols Report EPS 1-EC-77-1.

Ottawa, Ontario : Canada. Environmental Protection Service, 1977. 38 pp.

665.744 Can

This recommended environmental code outlines concerns and relevant consequences of actions and activities related to gas pipeline development, and makes recommendations with respect to mitigative measures. The document is organized into five basic sections: 1) introduction; 2) planning and design; 3) construction; 4) operations and maintenance; and 5) deactivation and abandonment. Guidance is provided on environmental considerations such as terrain stabilization, stream crossing requirements, erosion control, pollution control and other. A list of references is provided.

- A 41 ENVIRONMENTAL GUIDELINES. PITS AND QUARRIES.
MacLaren Plansearch.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1982. 69 pp.

333.731 6 Mac

This handbook presents environmental guidelines for pit and quarry development and restoration in the Yukon and Northwest Territories. Operating procedures that are both sensitive to the environment and efficient to the operator are recommended. The handbook is designed for anyone who deals with planning, design and operation of pits and quarries in the lands north of 60°. Brief summaries of relevant legislation and regulations are included and a glossary is provided.

environmental protection / mining / regulations / legislation / Yukon Territory / Northwest Territories / land use / permafrost

- A 42 "Environmental Impact of Linear Facilities."
N. Tywoniuk.
In THE CHALLENGE OF THE EIGHTIES. PROCEEDINGS [OF THE] NORTHERN TRANSPORTATION CONFERENCE, WHITEHORSE, YUKON, OCTOBER 5-7, 1982.
Edmonton, Alberta : Co-op Press Ltd., 1982. pp. 20-25.

380.5 Nor

Linear facilities refer to all-weather roads, winter roads, railways, oil and gas pipelines, telephone lines and electrical transmission lines. In determining the cumulative impact of linear facilities on the environment, various methods of assessment are available and in this paper selected methods are reviewed. Summaries are included which provide information on the environmental impact of linear facilities on: terrain; hydrology; vegetation; aquatic systems; birds; and mammals. A short list of references is provided.

- A 43 "Environmental Issues in Canadian Hydrocarbon Development, Offshore and Frontier Regions: A Special Interest View."
Richard Pratt.
In PROCEEDINGS OF THE NINTH ENVIRONMENTAL WORKSHOP, FAIRMONT, B.C., MAY 4-7, 1980.
Arctic Petroleum Operators' Association (APOA) et al.
Calgary, Alberta : Arctic Institute of North America, University of Calgary, 1980. pp. 306-316.

333.823 05 Arc 1980

Representing the Canadian Nature Federation, this speaker outlines that organization's concerns about offshore and frontier development. Scientists have found areas of biological, geological and historical importance in frontier and offshore areas which, argues Mr. Pratt, require urgent and complete protection. The value of the preservation of significant ecosystems, protection of plant and animal habitats and education and research are stressed. Proposed ecological reserves, to protect wildlife populations influenced by environmental and human disturbances, are discussed. Some aspects of the environmental impact and review process are criticized and federal government policy in this regard is considered. A list of references is included.

- A 44 ENVIRONMENTAL OPERATING GUIDELINES: HYDROCARBON WELL-SITES IN NORTHERN CANADA.
Spencer Environmental Management Services Ltd.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1986. 38 pp.

333.731 6 Spe

This document, designed to assist land use operators, land use managers, and inspectors, presents environmental operating guidelines for hydrocarbon well-sites in Yukon and Northwest Territories. Well-site planning, construction, operation, abandonment and restoration are discussed as well as current operational guidelines that afford environmental protection. The guidelines refer to the various terrain types, permafrost conditions, geographical areas and seasons of operation in northern Canada. There is a list of references and the document is illustrated.

- A 45 "Environmental Research in Frontier Regions."
Rolph Davis.
In FRONTIER OIL AND GAS DEVELOPMENT: THE DECADE AHEAD. PROCEEDINGS OF THE TENTH ENVIRONMENTAL WORKSHOP, MONTEBELLO, QUEBEC, APRIL 28 - MAY 1, 1981.
The Arctic Petroleum Operators' Association (APOA), et al.
Calgary, Alberta : Arctic Institute of North America, University of Calgary, 1981. pp. 35-43.

333.823 15 Fro

This author discusses the relevance and timeliness of environmental research conducted in support of major frontier hydrocarbon developments. The role of government in such projects and the types of research conducted are examined. Reference is made to major offshore hydrocarbon proposals in the Beaufort and Labrador Seas, as well as the Mackenzie Valley Pipeline and Lancaster Sound drilling project. The environmental assessment and review process is touched on briefly, as is the role of public interest groups, and public hearings, in the resolution of environmental concerns.

- A 46 ENVIRONMENTAL REVIEW OF THE 1979 BEAUFORT SEA OFFSHORE
DRILLING PROGRAM AND OVERVIEW OF 1976-79.
Canada. Department of Indian Affairs and Northern Development.
Northern Affairs Program.
INA Publication No.: QS-8248-040-EE-A1.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern
Development, 1980. 55 pp.

333.823 163 27 Can

This report provides a summary of the environmental factors
addressed in the annual reviews, carried out from 1976 through 1979,
of Dome Petroleum's drilling program in the Beaufort Sea. Beginning
with Dome's drilling subsidiary Canmar's initial deployment of two
drillships in August 1976, the report looks at significant events, year
by year, related to environmental operating conditions, liability
provisions in case of pollution and the inspections carried out by
federal oil and gas inspectors. In essence a report card on Canmar's
compliance with environmental regulations, this document includes
numerous tables of technical data summarizing the results of tests
carried out by the government inspectors.

- A 47 ENVIRONMENTAL STATEMENT. PUBLIC INTEREST. SUMMARY.
Polar Gas Limited.
s.l. : s.n., n.d. 19 pp.

333.73 Pol

This document is a summary of the Environmental Statement prepared
by Polar Gas Limited in support of applications to the National Energy
Board (NEB) for a Certificate of Public Convenience and Necessity
authorizing the construction of pipeline facilities and to the
Department of Indian Affairs and Northern Development (DIAND) for
authorization to use land. A background to the Polar Gas project is
given and numerous aspects of environmental impact are discussed.
Maps are provided to show the proposed pipeline route, environmental
features of Canada and environmental and land use features and
concerns along the route.

- A 49 "ESRF (Environmental Studies Revolving Funds)."
Maurice Ruel.
In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.
Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1984. pp. 113-118.

333.823 05 Arc 1984

This paper provides an overview of the structure and organization of the Environmental Studies Revolving Funds (ESRF). The status of the program itself is discussed in view of its relative newness, as well as the committee status, administration, the 1983 budget and studies, the forecast for the 1984 budget and a timetable for 1985 activities. The purpose of the ESRF is to fund environmental and social studies in order to decide whether oil and gas exploration or development activities, on Canada lands, should be authorized. Tables are presented to illustrate the subjects addressed by the speaker.

G.H. Jones.

In PROCEEDINGS OF THE FOURTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, "MAKING THE FRONTIERS CONVENTIONAL", FAIRMONT, B.C., MAY 12-15, 1985.

Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association - Offshore Operators' Division (CPA-OOD), 1985. pp. D9 - D11.

333.823 05 Arc 1985

In this paper the projects of the Environmental Studies Revolving Funds (ESRF), over the preceding two years, are reviewed. The paper is written from the perspective of industry and, in particular, it is pointed out that industry wishes to be satisfied that projects meet the Fund's criteria. Secondly, the manner in which industry is assessed costs by ESRF, and the principles behind these assessments, are discussed.

A 53 AN EVALUATION OF THE ACCUMULATED ENVIRONMENTAL IMPACTS TO BE POTENTIALLY EXPERIENCED BY THE YUKON TERRITORY WITH CONSTRUCTION OF THE FOOTHILLS OIL AND GAS PIPELINES.

Terry McComas.

Vancouver, British Columbia : s.n., 1980. various pag.

333.710 971 92 McC

The primary areas of emphasis in this report are three-fold: 1) identification of accumulated resource or ecological impacts likely to be experienced in the Yukon with gas or oil pipeline construction as proposed by Foothills Pipe Lines (Yukon) Ltd. (FPL(Y)); 2) the devising of means by which these impacts might be reduced or eliminated, through changes in either proposed alignment or scheduling; and 3) investigation of the literature to determine the likely ecological impact of a northern freshwater crude oil spill. The report was prepared for the Department of the Environment (DOE)/Department of Fisheries and Oceans (DFO) Task force on the Northern Pipeline Program.

A 55 "Government Research Programs and Industry: ESRF."

Ewan Cotterill.

In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.

Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1984. pp. 120-123.

333.823 05 Arc 1984

This paper identifies some problems which arose during the first year of operation of the Environmental Studies Revolving Funds (ESRF). Industry's involvement in the ESRF and some observations concerning areas of change being contemplated are discussed - for example the implementation of better mechanisms to ensure a broader range of input into the determination of the research needs and priorities. Finally, the author reviews the role of the ESRF's Social North Program Study Committee, of which he is Chairman.

A 56

"The Habitable Planet."

R.G.S. Currie.

In PROCEEDINGS OF THE SEVENTH ARCTIC ENVIRONMENTAL WORKSHOP, FAIRMONT, B.C., APRIL 12-15, 1978.

Arctic Petroleum Operators' Association (APOA) and the Canadian Petroleum Association (CPA).

Toronto, Ontario : The Institute of Environmental Studies, University of Toronto, 1978. pp. 4-18.

333.823 05 Arc 1978

In this address, the speaker presents a philosophical view of the general and political problems which underlie the task of developing the resources of the Arctic in an acceptable manner. The speaker suggests that Canadians can no longer afford to address the issues of development and ecological protection through an adversary system; rather the proponents must each view the other as a partner in arranging interface between industrial development and the natural world.

- A 58 THE IMPACTS OF PIPELINES ON FISH AND WILDLIFE: AN ANNOTATED BIBLIOGRAPHY.
The Northern Pipeline Agency: B. Vogel.
s.l. : The Northern Pipeline Agency, 1980. 86 pp.

016.544 Nor

This annotated bibliography lists 144 citations, in alphabetical order by author. The bibliography serves to review and assess scientific information on the disturbance of fish and wildlife caused by the construction and operation of pipelines, and to list available relevant information on the impacts of pipelines. A detailed introduction discusses the topic, concluding that construction and operation of a pipeline is possible with a minimum of long-term environmental disruption as long as special precautions and planning take place. The bibliography includes a subject index.

- A 59 INITIAL IMPACT ASSESSMENT: DEMPSTER CORRIDOR.
Alaska Highway Pipeline Panel.
Winnipeg, Manitoba : Alaska Highway Pipeline Panel, 1979.
various pag.

333.710 971 91 AHPP

The Alaska Highway Pipeline Panel is an autonomous group financed by Foothills Pipe Lines Ltd. (FPL). This report presents the Panel's view of the potential biological, physical and socio-economic impacts of the proposed Dempster Highway gas pipeline. Some emphasis is placed on the Panel's concerns for the continued survival of the Porcupine caribou herd. In addition to general recommendations, the need for an effective management system to avoid severe and unnecessary damage to the environment, prior to future industrial development in the Mackenzie Delta and Beaufort Sea regions, is stressed.

Interdisciplinary Systems Ltd.
Winnipeg, Manitoba : Alaska Highway Pipeline Panel, 1978. 540 pp.

333.710 971 91 AHPPb v. 1

This study describes the major potential environmental problems that could arise in the Dempster Corridor as a result of: 1) public use of the Dempster Highway; 2) development of the Dempster Lateral Gas Pipeline; and 3) both activities in combination. The research reported in this volume presents the results of preliminary field and office studies carried out to assist the Alaska Highway Pipeline Panel in its initial environmental evaluation of future activities within the Dempster Corridor in the Yukon and Northwest Territories. Each of the nine sections addresses a specific component of the environment, presenting a general description, identification of potential conflicts and recommendations to lessen adverse effects.

A 61 INITIAL IMPACT ASSESSMENT DEMPSTER CORRIDOR. BACKGROUND REPORT II. PHYSICAL AND BIOLOGICAL ENVIRONMENTS - NORTH DELTA SEGMENT.

Interdisciplinary Systems Limited

Winnipeg, Manitoba : Alaska Highway Pipeline Panel, 1978. 327 pp.

333.710 971 91 AHPPb v. 2

The Alaska Highway Pipeline Panel was established in 1976 to study and report on the physical, biological and human environmental implications of construction and operation of the proposed Alaska Highway gas pipeline in the Yukon Territory. This report addresses the effects of pipeline development on the North Delta Segment of the Dempster Corridor. Nine research reports dealing with specific components of the environment are included: land, water, air, mammals, birds, fish, vegetation, heritage and land use. Each report begins with a description of the problems of pipeline development in relation to various parameters, presents the environmental setting and problem definition for each parameter and gives conclusions and recommendations to control or mitigate potential impacts.

A 62 LANCASTER SOUND.

Helen Gerson and Richard Gerson.

Toronto, Ontario : World Wildlife Fund Canada and Canada.

Department of Fisheries and Oceans, 1986. 22 pp.

574.971 95 Ger

Lancaster Sound, N.W.T., is home to large numbers of birds, seals, whales and polar bears, many of which are harvested by the Inuit living in that area. This booklet describes the migration routes, population sizes, and ecosystems vital to the survival of these species, as well as ice conditions, and currents, all of which may affect their habitats. The booklet is illustrated and the text is presented in both English and Syllabics.

- A 63 LAND USE GUIDELINES. ACCESS ROADS AND TRAILS.
Hardy Associates (1978) Ltd.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern
Development, 1984. 49 pp.

333.771 6 Har

Prepared for the Northern Affairs Program, Department of Indian Affairs and Northern Development (DIAND) this handbook presents land use guidelines for the planning, development, operation and abandonment of access roads and trails in the Northwest Territories and Yukon Territory. Written for contractors, operators and inspectors of access roads and trails, the document explains the rationale behind many of the terms and conditions attached to land use permits and demonstrates that procedures that are considerate of the environment can also be efficient for the operator. In addition, a brief summary of the legislation and regulations which apply to road development is provided.

- A 64 LAND USE GUIDELINES. MINERAL EXPLORATION. YUKON AND NORTHWEST TERRITORIES.
Canada. Department of Indian Affairs and Northern Development.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1983. 52 pp.

333.731 6 DIAND

This booklet is a synthesis of techniques and guidelines for minimizing environmental damage during mineral exploration in the Yukon and Northwest Territories. It contains information on a range of topics from how to apply for a land use permit to proper procedures for abandoning an operational site. The content is designed to help operators understand and comply with Territorial land use regulations, and in general to assist operators in carrying out their activities so that the least amount of damage to the environment results. The booklet contains two main sections: background to environmental protection; and minimizing environmental damage. It is illustrated and a short reading list is provided.

- A 65 MACKENZIE ENVIRONMENTAL MONITORING PROJECT 1985-1986
FINAL REPORT.
LGL Environmental Research Associates.
s.l. : LGL Environmental Research Associates, 1986. 308 pp.

333.823 16 LGL

This unpublished report was prepared for the Department of Indian Affairs and Northern Development (DIAND), Department of the Environment (DOE), Department of Fisheries and Oceans (DFO), Government of the Northwest Territories (GNWT) and the Yukon Territorial Government (YTG). This group initiated the Mackenzie Environmental Monitoring Program (MEMP) which monitors the terrestrial and freshwater environment of the Mackenzie Delta and Mackenzie Valley. The MEMP addresses concerns that hydrocarbon development activities in the Beaufort Sea may result in adverse environmental impacts. This report summarizes the results of the first year of the MEMP (March 1985 to March 1986).

- A 66 MACKENZIE VALLEY PIPELINE INQUIRY REVIEW.
Envirocon Ltd.
Calgary, Alberta : Envirocon Ltd., 1976. 162 pp.

330.971 Env

This report, prepared for the Environmental Protection Service, Department of the Environment (DOE), consists of a short synopsis of each significant or contentious environmental issue identified in the Mackenzie Valley Pipeline Inquiry, held under the authority of Mr. Justice Berger. The synopses are the result of a review of the inquiry transcripts, community hearings, and other material tabled as evidence. Criteria applied in selecting significant or contentious issues include potential magnitude of threat to the environment, the amount of debate of the issue, and discussion of mitigative measures. Pipeline construction, operation, and related facilities and activities are highlighted in terms of their effects on fish, wildlife, forests, and general environmental conditions.

- A 67 MONITORING OF TWO EXPLORATORY DRILLING SITES IN THE SHALLOW REGIONS OF MACKENZIE BAY. A REPORT TO THE INDUSTRY-GOVERNMENT WORKING GROUP "A" ON THE DISPOSAL OF WASTE DRILLING FLUIDS IN THE CANADIAN ARCTIC. VOLUME #4.

S.E. Hrudef and J.D. McMullen.

s.l. : Canada. Environmental Protection Service, 1975. n.p.

628.168 3 Hrud

The first drilling operation from an artificial island in the coastal waters of the Beaufort Sea was conducted in September 1973. In response to the unique operating and waste disposal problems anticipated, a monitoring program was conducted by Imperial Oil Limited, in consultation with the Department of the Environment (DOE). This report examines the monitoring program at that site and at a second artificial island site commencing in December 1973. The drilling operations and operating practices are described, procedures are discussed, and the conclusions drawn are listed, with particular reference to the disposal of drilling fluids and water quality monitoring.

A 69 OBSERVATIONS ON THE ENVIRONMENTAL MONITORING AND SURVEILLANCE OF THE ALYESKA OR TRANS-ALASKA PIPELINE.

D.G. Wright.

Canada. Department of Fisheries and the Environment. Fisheries and Marine Services Manuscript Report 1451.

Winnipeg, Manitoba : Canada. Department of Fisheries and the Environment, 1978. 26 pp.

333.823 1 Wri

Following the discovery of crude oil at Prudhoe Bay, Alaska in January 1968, an oil industry consortium, Alyeska Pipeline Service Company, proceeded to develop and construct a 1,290 km hot oil pipeline to the port of Valdez on Prince William Sound. This document presents a description of the pipeline and discusses many of the environmental considerations associated with its construction. Observations on the organizational structure and effectiveness of an environmental monitoring and surveillance team are provided. A series of notes and recommendations considered relevant to the design of any pipeline surveillance agency which may be required in Canada is included.

monitoring / Alaska / pipeline facilities / oil spills

A 70 "Offshore Environmental Studies Panel."

G. Rempel.

In PROCEEDINGS OF THE SEVENTH ARCTIC ENVIRONMENTAL WORKSHOP, FAIRMONT, B.C., APRIL 12-15, 1978.

Arctic Petroleum Operators' Association (APOA) and the Canadian Petroleum Association (CPA).

Toronto, Ontario : The Institute of Environmental Studies, University of Toronto, 1978. pp. 74-85.

333.823 05 Arc 1978

The results of the Offshore Environmental Studies Panel discussions, at the subject workshop, are presented in this paper. The purposes and scope of environmental studies, in support of environmental impact assessment for proposed developments, are addressed. As well, the panel considers the question of who should carry out the studies, how long they should take, how much they should cost, who should pay for them and who should determine the adequacy of the finished product.

- A 71 OFFSHORE OIL AND GAS IN CANADA. WEST COAST ENVIRONMENTAL, SOCIAL AND ECONOMIC ISSUES.
Michael W. McPhee.
Vancouver, British Columbia : Westwater Research Centre, University of British Columbia, 1982. 83 pp.

333.709 711 3 McP

This study was written with a view to possible renewed hydrocarbon development off British Columbia's coast, and particularly with a view to ensuring that environmental, social and regional economic impacts would be anticipated, at the earliest stage, and taken into account in the planning and decision making process. The author reviews how the environmental assessment aspects of offshore petroleum exploration and development were dealt with in other jurisdictions and examines the likely impacts of such development on the environment and the people of the coastal regions of the Province.

- A 72 "Offshore Production, Evolution of Technology, Cook Inlet, Alaska."
Charles H. Baskin.
In PROCEEDINGS OF THE NINTH ENVIRONMENTAL WORKSHOP, FAIRMONT, B.C., MAY 4-7, 1980.
Arctic Petroleum Operators' Association (APOA) et al.
Calgary, Alberta : Arctic Institute of North America, University of Calgary, 1980. pp. 66-82.

333.823 05 Arc 1980

This paper outlines some significant environmental conditions peculiar to the Upper Cook Inlet, Alaska, and describes various engineering and operational practices which were employed to satisfy the environmental requirements relative to oil and gas exploration and production in the area.

Cook Inlet, Alaska / natural gas / hydrocarbon production / environmental assessment / engineering, environmental / seismicity / climatology / drilling, offshore / tidal currents / ice, sea / oil rigs / APOA

- A 73 "Oil Development and Wildlife."
Angus Gavin.
In THE NORTHERN GAMBLE: PROCEEDINGS [OF THE] SEVENTH NORTHERN RESOURCES CONFERENCE, WHITEHORSE, YUKON, OCTOBER 14-16, 1981.
Whitehorse, Yukon : s.n., 1981. pp. 49-55.

333.715 Nor 1981

This paper describes highlights of studies conducted by the author with a view to minimizing the impact of oil development on the coastal environment in the Prudhoe Bay area. While various wildlife species are touched on, emphasis is given to caribou as the most obvious inhabitant of the area.

Prudhoe Bay, Alaska / environmental impact / caribou / coastal zone management / vegetation / soils / permafrost / waterfowl / birds / mammals / fur-bearers / mammals, marine

- A 74 PETROLEUM EFFECTS IN THE ARCTIC ENVIRONMENT.
edited by F.R. Engelhardt.
London, England : Elsevier Applied Science Publishers Ltd., 1985.
281 pp.

363.738 2 Pet

This volume contains a selection of papers which present views of the current state of knowledge with respect to the fate and effects of hydrocarbon exploration and production in the Arctic environment. Each paper includes a list of references and a subject index is provided.

Arctic / hydrocarbon production / exploration / environmental impact / pollution, oil / ecology / ecology, marine / ecosystems, aquatic / biology, aquatic / microbiology / birds / fish / mammals, marine / benthic invertebrates / socio-economic aspects

A 75 PLANNING AND MANAGING ENVIRONMENTALLY SIGNIFICANT AREAS IN THE NORTHWEST TERRITORIES.

J.G. Nelson and Sabine Jessen.

Canadian Arctic Resources Committee (CARC). Northwest Territories series; monograph 1.

Waterloo, Ontario : Canadian Arctic Resources Committee and University of Waterloo, Faculty of Environmental Studies, 1984. 139 pp.

333.715 Nel

This discussion paper focuses on the development of a method for planning and managing environmentally significant areas in the Northwest Territories. The principal concern in this discussion is how to match such areas with appropriate actions and agencies so that each area can be managed in order to protect its wildlife, geology, scenic beauty or unique character. The importance of comprehensive land use planning is emphasized in this document. A list of references is provided and photographs and tables supplement the text.

land use / regional planning / Northwest Territories / environmental protection / geology / land claims / government / socio-economic aspects / regulatory agencies / CARC / ecology

A 76 POLAR GAS PROJECT. CATALOGUE OF RESEARCH PROJECT REPORTS.

Polar Gas Ltd., Environmental Department.

s.l. : Polar Gas Ltd., 1982. 32 pp.

016.5 Pol

The Polar Gas project was established in 1972 by a consortium of companies interested in the development of the frontier natural gas reserves discovered by Panarctic Oils in Canada's Arctic Islands. This catalogue lists environmental and socio-economic research reports published primarily in support of applications to government regulatory agencies for permission to construct a gas pipeline. Entries are grouped by year of publication.

- A 77 PRELIMINARY ASSESSMENT OF SEISMIC SOURCES AND SEISMICITY
OF THE CANADIAN BEAUFORT SEA AND PRELIMINARY EVALUATION
OF POTENTIAL BEHAVIOR OF SAND ISLANDS DURING
EARTHQUAKES.

Woodward Clyde Consultants.

Beaufort EIS Reference Works 1982.

San Francisco, California : Woodward-Clyde Consultants, 1980.

65 pp.

551.22 Woo

Dome Petroleum commissioned this study in view of the company's plan to construct sand islands, in the Beaufort Sea, for exploration, drilling and/or production purposes. With the aid of maps, the results of an assessment of seismic sources and seismicity are summarized. There follows a review of Dome's suggested Seismicity Measurement Program. The major portion of this study concerns the effects on sand islands of earthquake activity. The composition of the proposed sand islands is discussed. Estimates of the most likely behavior patterns, and the level of shaking below which the integrity of the islands can be judged to be retained, are reported. Recommendations are included as is a list of references.

Dome / Beaufort Sea / EIS / earthquakes / seismicity / artificial islands / drilling, offshore / exploration / hydrocarbon production

- A 78 A PRELIMINARY ASSESSMENT OF WATER POLLUTION FROM
ABANDONED OIL AND GAS DRILLING SUMPS IN THE NORTHWEST
TERRITORIES. A REPORT TO THE INDUSTRY-GOVERNMENT
WORKING GROUP "A" ON THE DISPOSAL OF WASTE DRILLING
FLUIDS IN THE CANADIAN ARCTIC. VOLUME #2.

S.E. Hrudey, J. Michalchuk and J.D. McMullen.

s.l. : Canada. Environmental Protection Service, 1974. 42 pp.

628.168 3 Hru

In view of the significant possibility of contact between unpolluted waters and drilling mud chemicals, as a result of current drilling fluids management practices, this study assesses the magnitude of any water pollution problems associated with abandoned sumps in the Mackenzie Delta and Arctic Islands. (The accepted practice in waste drilling fluid management for land based operations has been the construction of an excavated pit, or sump, to collect the waste. After completion of the well, the sump fluids freeze and the sump is backfilled.) This study identifies high concentrates of chlorides and sulphates in sump fluids, describes the methods used to conduct the assessment and presents observations and recommendations for improved waste disposal. Colour photographs illustrate the study and a short bibliography is included.

A 83 REMOTE SENSING DATA SUMMARY: MACKENZIE AND DEMPSTER HIGHWAYS.

W.J. Aird.

Canada. Environmental Protection Service. Ecological Impact Appraisal and Control Division. Report EPS 3-EP-75-2.

Ottawa, Ontario : Canada. Department of the Environment, 1975. n.p.

912.719 Aird

This report documents the remote sensing data, stored in the National Air Photo Library (NAPL), which has been obtained to assist in the examination of the environmental effects of the Mackenzie and Dempster highways and provides guidance on how this data may be retrieved. A set of maps is included to identify two and ten mile wide highway corridors. The relationship between ground resolution and photographic scale is discussed with a view to assisting users in deciding if the photography available is of sufficient detail for their purposes. A worked example of the data retrieval procedure is given.

remote sensing / NAPL / Mackenzie Highway / Dempster Highway / maps / environmental impact

A 84 REPORT OF THE TASK FORCE ON NORTHERN CONSERVATION.

Task Force on Northern Conservation 1984.

Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1984. 47 pp.

333.709 719 Can

The assignment of the Task Force on Northern Conservation was to develop a framework for the creation of a comprehensive conservation policy for the Yukon Territory and Northwest Territories, including both terrestrial and marine components. This report, which is illustrated throughout by the use of coloured photographs, presents the findings of the Task Force and its recommendations. Two components of a conservation strategy are identified - a process for the management of land and renewable resources and a system for the establishment of protected areas. A plan for the implementation of the strategy is included.

- A 85 REPORT OF THE WORKSHOP ON AN ARCTIC MARINE CONSERVATION STRATEGY FOR THE DEPARTMENT OF FISHERIES AND OCEANS, MAY 6-8, 1985.

Arctic Offshore Development Committee.

ARCOD Working Paper 85-3.

s.l. : Arctic Offshore Development Committee, 1985. 63 pp.

333.72 ARCOD

This internal working paper (cited with the permission of the Arctic Offshore Development Committee (ARCOD)) summarizes the discussion and recommendations arising from the subject workshop. The stated purpose of the workshop was to develop information and ideas relating to the role of the Department of Fisheries and Oceans (DFO) in Arctic marine conservation and to develop some strategy options for DFO. The DFO's main responsibilities - sea, coast and inland fisheries, fishing and recreational harbours, hydrography and marine sciences and coordination of government policies and programs - are examined and the primary conclusions of the workshop participants, concerning the role of the DFO are included here.

ARCOD / DFO / workshops / environmental protection / fisheries / fishing / recreation / hydrography / Arctic / government / aquatic habitats / native peoples / native harvest

- A 86 REVIEW OF NOISE ASPECTS OF E.I.S. FOR THE ALASKA HIGHWAY GAS PIPELINE PROJECT.

Harford, Kennedy, Wakefield Ltd.

Vancouver, British Columbia : Harford, Kennedy, Wakefield Ltd., 1979. 20 pp.

330.971 Har

This document presents a review of those aspects of the Environmental Impact Statement (EIS) for the Alaska Highway Gas Pipeline (AHGP) project which pertain to the possible impact of project operating and construction noise. Since noise generated by pipeline construction causes only temporary impact on a given area along its route, this review emphasizes the operating noise of the five initial and four future gas compressor stations which will produce moderate levels of steady noise and, infrequently, high levels of intermittent noise, throughout the working life of the proposed pipeline. Potential impacts of noise pollution on humans (residents, hikers, campers, for example), annoyance and community reaction to noise, and the effects on wildlife, most notably behavioral, are discussed. A short list of references is provided.

EIS / environmental impact / AHGP / pollution, noise / socio-economic impacts / wildlife / recreation

A REVIEW OF THE WILDLIFE AND MARINE RESOURCES OF THE CAPE PARRY REGION IN RELATION TO A FUEL STAGING AREA FOR SEA VESSELS NEAR CAPE PARRY, N.W.T.

M.A. Fraker, W.B. Griffiths and J.G. Ward.

Beaufort EIS Reference Works 1982.

Vancouver, British Columbia : LGL Limited, 1979. 74 pp.

333.954 1 Fra

In view of the proposed construction of a fuel staging facility near Cape Parry, N.W.T. by Canmar, on behalf of Dome Petroleum Limited, this report was prepared for submission to the Department of Indian Affairs and Northern Development (DIAND) as part of an environmental evaluation. The report summarizes available information on the abundance and distribution of wildlife and marine resources in the area, human utilization of these resources and the potential impacts of the development of the proposed facility, including mitigative procedures and research planned to supplement current information. A fairly comprehensive list of references is provided and the report includes some maps and tables.

A REVIEW OF TREATMENT AND DISPOSAL OPTIONS IN THE CANADIAN ARCTIC FOR CUTTINGS CONTAMINATED WITH OIL-BASED DRILLING MUDS.

R.W. Drinnan et al.

s.l. : Environmental Studies Revolving Funds, 1986. 109 pp.

628.168 36 Dri

Funded by the Environmental Studies Revolving Funds (ESRF), this study has been prepared as an initial review of information on the treatment and disposal options in the Arctic for cuttings contaminated with oil-based drilling muds. The physical operating environment in the Arctic is reviewed briefly and parameters which strongly influence the movement of cuttings in the marine environment are discussed. These include wind, waves, currents, sedimentology and ice. Environmental considerations concerned with marine disposal, land disposal and incinerator options are addressed and the development of cuttings treatment systems is presented. A list of references is provided.

pp. 102-156.

333.823 05 Arc 1979

This lengthy article includes all the background materials, case studies, assumptions and assigned tasks which were given to participants at the Socio-Economic/Environmental Assessment panel workshop portion of the subject workshop. In summary, guidelines for socio-economic and environmental assessments are identified as well as the need to define the responsibilities within government, industry and community. The discussions which took place are reported in considerable detail and the closing remarks of each workshop participant are included.

A 91 SUBMISSIONS TO THE YUKON PUBLIC HEARINGS PANEL [ALASKA HIGHWAY PIPELINE PANEL].
Canada. Department of the Environment and Canada. Department of Fisheries and Oceans.
Vancouver, British Columbia : Canada. Department of the Environment and Canada. Department of Fisheries and Oceans, 1979.
various pag.

330.971 DOE

This volume presents the texts of submissions by the Department of the Environment (DOE) and the Department of Fisheries and Oceans (DFO) to Yukon public hearings of the Alaska Highway Pipeline Panel. The two departments reviewed the Environmental Impact Statement (EIS) prepared by Foothills Pipe Lines (South Yukon) Ltd. (FPL(SY)) and the briefs presented here identify environmental concerns and deficiencies in the EIS and recommend future study requirements for subsequent planning and design phases of the Alaska Highway Gas Pipeline (AHGP). The main topics of concern are fisheries, wildlife, birds, climatology, hydrology and vegetation.

A 92 SUMMARY ENVIRONMENTAL AND SOCIO-ECONOMIC IMPACT STATEMENTS. ARCTIC PILOT PROJECT. PREPARED [IN] THE FALL OF 1978.

s.l. : s.n., 1978. 90 pp.

333.951 APP

The Arctic Pilot Project is designed to test the technical and economic feasibility of transporting natural gas from the Canadian Arctic Islands to eastern Canada, first of all by pipeline, south across Melville Island from the Drake Point gas fields, then liquified and shipped by two specially designed icebreaking liquified natural gas (LNG) carriers to the eastern terminal. This summary of the project's environmental statement describes components of the Arctic Pilot Project, the environmental setting, anticipated environmental impacts and mitigative measures to be used to reduce these impacts, and the implications for public safety. Included is a socio-economic policy statement which recognizes and addresses the concerns likely to arise among inhabitants of affected areas following the introduction of an industrial project of such size and scope.

- A 94 TECHNICAL ENVIRONMENTAL GUIDELINES FOR OFFSHORE OIL AND GAS DEVELOPMENT.
edited by John T.E. Gilbert.
Tulsa, Oklahoma : Pennwell Books, 1983. 330 pp.

333.823 Gil

This book provides a working manual for personnel involved in the environmental aspects of planning and managing offshore hydrocarbon development activities. Guidelines are included for the early planning stage, coping with the physical offshore environment, dealing with ecological aspects of offshore development and preparing an oil spill contingency plan. This text also considers the various problems associated with protecting the marine life affected by drilling operations. Each chapter contains a list of references and the volume includes a glossary and an index.

This report presents an annotated list of all vertebrate wildlife species that occur, or have been reported, in the Mackenzie Delta region, with a brief discussion of some of the species. In each of the report's four main sections (mammals; birds; amphibians; and fish), there is an introduction, identification of species, annotated list of species and a list of relevant references. In addition there is a chapter on the vegetation of the area and an introduction which describes the geography of the region. A wildlife species index is provided as is a glossary.

Technical Report Series No. 4.
Delta, British Columbia : Canada. Canadian Wildlife Service, Pacific
and Yukon Region, 1986. 22 pp.

598.297 196 Haw

The Yukon portion of the Mackenzie Delta is one of two Yukon wetland areas listed as critical and having international importance in the North American Waterfowl Management Plan. The subject survey was conducted following a recommendation from the Beaufort Sea Environmental Assessment Panel (BSEAP) that inventories and research, on birds in regions outside of protected areas where oil and gas exploration and production may have an impact, should be ongoing. The objective of the study is to determine species composition, relative abundance, nesting density and breeding biology of birds in the Whitefish Station area of the western Mackenzie Delta. The results of the study are presented here and there is some related discussion. A list of references cited is provided.

551.468 7 ALH

This paper presents information derived from ground-based censuses in a variety of tundra and littoral habitats specific to shore birds. Barrow, Fish Creek Delta and Prudhoe Bay were the three sites used and the data collected provide a quantitative and consistent description of seasonal changes in habitat use at different sites, and multi-year studies at the Barrow Site. The author discusses annual variations in movement, population densities and habitat use and also presents information from other published studies which extends the discussion to other sites along the Alaskan Beaufort Sea coast. A list of references is provided.

The results of seabird observations made by Canterra Energy Ltd., during its southern Davis Strait seismic programs of 1980, 1981 and 1982, are presented in this paper. Explosives were used in 1980 and 1981 while the 1982 program used airguns and some very small charges. The effects of seismic activity on the abundance and frequency of sighting of seabirds is presented, along with reports of mortalities. A list of literature cited is included.

T.W. Barry, S.J. Barry and B. Jacobson.
Beaufort EIS Reference Works 1982.
s.l. : s.n., 1981. 69 pp.

598.292 4 Bar

This environmental impact reference volume documents seven surveys of birds associated with marine and coastal areas of the Beaufort Sea, Amundsen Gulf, Prince of Wales Strait and Viscount Melville Sound, conducted during 1980. The stated purpose of the surveys was to determine times and places that are important to seabirds during the migration, nesting, molting, brood rearing and fall staging phases of their life cycles. The study rates the habitat used by marine or seabirds according to its sensitivity to environmental impact. Estimates of the portion of species population that might be affected by construction, transportation, or oil spills in connection with hydrocarbon exploration and development activities are included. A list of references cited is provided.

- A 104 SPRING USE OF THE MACKENZIE RIVER BY SNOW GEESE IN RELATION TO THE NORMAN WELLS OILFIELD EXPANSION PROJECT.
P.N. Boothroyd.
Winnipeg, Manitoba : Canadian Wildlife Service, 1985. 211 pp.

333.958 Boo

Esso's oilfield expansion project at Norman Wells involves: construction of six production islands in the Mackenzie River to enable recovery from oil reserves under the river; drilling nearly 200 wells; and installing a pipeline gathering system for transportation purposes. The influence of this expansion project on spring use of local habitat by snow geese is examined in this study. Data collected during aerial surveys of the Mackenzie river provide the basis for determining snow goose use in the Norman Wells area compared to other upstream and downstream habitats. The degree to which various environmental factors influence snow goose migration and staging site selection is discussed and the results of on-site monitoring reviews conducted in 1983 and 1984 are reviewed. A list of references cited is provided.

A 106 "An Annual Carbon Budget for an Arctic Kelp Community.

Kenneth H. Dunton.

In THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.

edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 311-325.

551.468 7 Ala

This author reviews some previous research, conducted in temperate climates, which documents that marine algae make substantial contributions of carbon to coastal systems. Following this, the author summarizes the fraction of kelp carbon that is consumed by a common herbivore in the Beaufort Sea. Quantitative variations in the annual carbon input of kelp - caused by differences in winter light availability - are presented and compared to the carbon contributions made by benthic algae, ice algae and phytoplankton. This paper is illustrated and a list of references is provided.

333.823 05 Arc 1983

In attempting to predict the probable effect of disposal of used drilling fluids, which contain heavy metals, the authors have restricted themselves to the Beaufort Sea and have tried to establish natural scales of time and space appropriate to the region. As well as reporting the results of experiments, the authors suggest how initial guidelines might be set, with due consideration of the general aims of disposal regulations, to prevent immediate toxicity, to prevent long term irreversible damage, and to prevent exposure of humans to pollutants. The importance of environmental monitoring, to enable revising of regulations should they fail in their objectives, is emphasized.

Cisco-Migrants from Canada?"
B.J. Galloway et al.
In CONTRIBUTIONS TO THE SCIENCE OF ENVIRONMENTAL IMPACT
ASSESSMENT: THREE PAPERS ON THE ARCTIC CISCO (COREGONUS
AUTUMNALIS) OF NORTHERN ALASKA.
edited by D.W. Norton.
Biological Papers of the University of Alaska. Number 21.
Fairbanks, Alaska : Institute of Arctic Biology, University of Alaska,
1983. pp. 4-23.

333.956 1 Con

The purpose of this article is to interpret observed population
changes of Arctic cisco in the Colville River Delta of Alaska. The
authors describe the Deriso model, which is used to provide a
predicted sequence of catch values that closely imitate the historical
records. For the purpose of this research, the model was applied to
15 years of catch and fishing effort records from a local commercial
fishery. The results of the research are presented here and
discussed in terms of identifying environmental causes for fluctuations
in population figures. As well, a theory that Arctic cisco in Alaska
are representatives of a Canadian stock from the Mackenzie River is
proposed and evidence relevant to this theory is examined. A list of
references is included.

551.468 7 Ala

This paper discusses studies which consider the bacteria that occur in the Beaufort Sea with respect to their numbers, diversity, physiological adaptations, metabolic activities, and the potential impact of oil and gas development on them. It is explained that since the Beaufort Sea is ice-covered for much or all of the year and has continuous sunlight during summer and a continuous darkness during winter, the bacteria living in Arctic ecosystems must adapt to these conditions. The tests conducted for this study are described and the results are presented in written and tabular formats. A list of references is included.

A 114 COLLECTION OF FISHERIES INFORMATION FROM WATER BODIES ALONG THE PROPOSED ALASKA HIGHWAY GAS PIPELINE ROUTE TO JULY 15, 1977.

Northern Natural Resource Services Ltd.

Vancouver, British Columbia : Northern Natural Resource Services Ltd., 1977. 360 pp.

639.207 207 191 Nor

The Department of Fisheries and the Environment required that this study be undertaken as a result of an application, by Foothills Pipe Lines (Yukon) Ltd. (FPL(Y)), for a grant of interests in lands in the Yukon to construct and operate a natural gas pipeline along the Alaska Highway. The study presents site-specific data, collected at or near the proposed pipeline crossing sites, with a view to assessing the potential impacts on fisheries of the proposed pipeline. It is pointed out that this is a preliminary assessment only. Data presented include species composition of fish in water bodies, cycle stages and migration. Maps and photographs are used throughout the study.

363.738 2 Pet

Within harsh arctic ecosystems, microorganisms play essential roles in the energy transfers and nutrient-cycling reactions that form the foundations for the existence of higher organisms. This paper examines the impacts of Arctic oil and gas development on the critical activities of microorganisms relative to maintaining an ecological balance. It is the author's opinion that, compared to temperate ecosystems, Arctic tundra and coastal marine ecosystems are relatively stagnant and consequently rates of hydrocarbon biodegradation in Arctic ecosystems are slow. Decontamination after a major oil spill, therefore, could take decades rather than years. A comprehensive list of references is provided.

Responses of temperate marine zooplankton to hydrocarbons have been intensively studied due to their importance as secondary producers in marine ecosystems. Planktonic production ultimately supplies energy for littoral, sublittoral, pelagic and benthic communities. This paper examines the specific effects of petroleum hydrocarbons on the ecology of Arctic zooplankton and the resulting effects on the aquatic ecosystem. Tables are used to summarize information discussed in the text and a list of references is included.

Northern Oil and Gas Action Program Project B-3: Critical Western Arctic Fresh Water Habitats.

Winnipeg, Manitoba : Canada. Department of Fisheries and Oceans, 1985. various pag.

333.955 Bil

This Northern Oil and Gas Action Program (NOGAP) report was prepared for the Department of Fisheries and Oceans (DFO). The author presents a preliminary review of unpublished data relating to the benthic invertebrates and the physical and chemical characteristics of the sampling stations in the Mackenzie Delta. The information is tabulated to show occurrences, densities and characteristics of benthic species at each sampling station. All major physical and chemical parameters defining the habitats at the sampling sites are also tabulated and the author concludes by making recommendations for further processing and analysis of the Mackenzie Delta data. The information is presently mostly in tabular and graphic format.

A 121 A FISHERIES SURVEY OF HERSCHEL ISLAND, YUKON TERRITORY FROM 9 JULY TO 12 AUGUST 1985.

R.F. Baker.

Winnipeg, Manitoba : North/South Consultants Inc., n.d. 44 pp.

333.956 11 Bak

This study is part of the Herschel Island Territorial Park Planning and Development Project and was conducted under contract to the Yukon Territorial Government (YTG). The study was undertaken to obtain information on the spatial midsummer distribution of nearshore anadromous and marine fishes of Herschel Island to assess the potential impact of park development on these species. The specifics of the study are presented in some detail. The study is illustrated and a list of references is provided.

- A 122 FISHES, INVERTEBRATES AND MARINE PLANTS. THE BEAUFORT SEA AND THE SEARCH FOR OIL.
Roger Percy, Brian Smiley and Trudy Mullen.
edited by R.J. Childerhose.
Beaufort Sea Project Overview Report.
Ottawa, Ontario : Beaufort Sea Project. Canada. Department of Fisheries and Oceans, 1985. 167 pp.

591.524 7 Per

One of a series of Beaufort Sea Project Overview Reports, the theme of this report is a general outline of life histories and behavior of Beaufort Sea region fish, marine invertebrates and plant life and their relationship with each other and their surroundings. The arrangement of the report is geographical, beginning with the Mackenzie River, moving downstream to the estuary and into the Beaufort Sea. The authors then discuss the impact of exploration for gas and oil reserves, the use of the fish by native fishermen and the socio-economic effects of the oil industry presence in the area. The dangers and effects of possible oil spills are outlined in the concluding sections of the report. The Beaufort Sea Project is the name given to a group of studies designed to assist in ensuring that responsible regional environmental assessments are conducted prior to major offshore drilling programs being authorized.

- A 123 "Followup Investigations on the Acute Lethal and Sublethal Effects of Drilling Wastes."
J.M. Osborne and J. Rowley.
In TWELFTH ANNUAL ARCTIC ENVIRONMENTAL WORKSHOP: ISSUES OF THE 80'S, FAIRMONT, B.C., MAY 8-11, 1983 (CANADIAN PETROLEUM ASSOCIATION (CPA), EASTCOAST PETROLEUM OPERATORS' ASSOCIATION (EPOA) AND ARCTIC PETROLEUM OPERATORS' ASSOCIATION (APOA)).
Calgary, Alberta : Canadian Petroleum Association, 1983.
pp. 134-137.

333.823 05 Arc 1983

The authors of this paper present the findings of a government/industry working group investigating the acute lethal and sublethal effects of discharging waste drilling fluid into Arctic waters. It is shown that rapid dilution of water-based drilling fluids in the receiving environment renders the fluid non-acutely lethal. Sublethal studies conducted in both the U.S.A. and Canada indicate that some sublethal effects may be associated with waste drilling fluids - however it is reported here that the results of these studies cannot be translated into effects on the ecosystem. It is the consensus of the working group that any sublethal effects attributable to drilling waste fluids would be caused by the heavy metal content and that any future studies should concentrate on this aspect.

- A 124 GEOPHYSICAL AND BIOLOGICAL RECONNAISSANCE OF ROCK HABITATS IN WESTERN CAMDEN BAY, BEAUFORT SEA, ALASKA.
K.H. Dunton, S.V. Schonberg and Donald M. Schell.
Fairbanks, Alaska : Institute of Water Resources, University of Alaska, 1983. 30 pp.

551.48 Dun

This illustrated report presents the results of a ten-day geophysical and biological survey conducted in western Camden Bay in the Beaufort Sea. The primary objective of this benthic survey was to determine the existence of boulders and cobbles on the seafloor and the utilization of these by epilithic organisms such as seaweed and red algae. The data from the survey are presented here and discussed in terms of contradiction between these results and the results of a previous similar study. A list of references cited is included.

Winnipeg, Manitoba : Canada. Department of Fisheries and Oceans. Western Region, 1986. 70 pp.

592.091 632 7 Thom

This report, describing the benthos of 25 locations in the central and eastern Canadian Arctic Islands, is the result of a Department of Fisheries and Oceans (DFO) project sponsored by the Northern Oil and Gas Action Program (NOGAP). Benthic communities are identified and the roles of depth, substrate, exposure, food supply and predation in structuring these communities are identified. Sampling sites included open coastline, estuarine areas and areas within open and semi-enclosed bays and inlets. Some sampling sites were heavily used by whales, walruses and Arctic char. Ringed seals and lesser numbers of bearded seals were widely distributed throughout all the areas studied. Much of the data and study results are presented in tabular format. A list of references is provided.

A 127 THE IMPACT OF GRAVEL DREDGING ON BENTHIC FAUNA NEAR HERSCHEL ISLAND, YUKON TERRITORY 1981.

W.A. Heath et al

Beaufort EIS Reference Works 1982.

Inuvik, Northwest Territories : Arctic Laboratories Limited, 1982. 147 pp.

333.955 Hea

The use of dredged gravel and rock in the construction of artificial islands for offshore petroleum exploration is described as a new form of resource utilization in the Beaufort Sea. This report, prepared for Dome Petroleum Limited, examines the impact of dredging on the benthos and subsequent recolonization potential of gravel bars in Mackenzie Bay near Herschel Island, Yukon Territory. Results from sampling conducted during July and September 1981 (before and after dredging took place) are considered by the authors. Photographs and charts are included but much of the information is presented in tabular format. A list of references is provided.

A 128 "An Investigation of the Dispersions of Drilling Mud and Cuttings From a Point Source Discharge and Its Environmental Implications."

L.G. Hammer.

In TWELFTH ANNUAL ARCTIC ENVIRONMENTAL WORKSHOP: ISSUES OF THE 80'S, FAIRMONT, B.C., MAY 8-11, 1983 (CANADIAN PETROLEUM ASSOCIATION (CPA), EASTCOAST PETROLEUM OPERATORS' ASSOCIATION (EPOA) AND ARCTIC PETROLEUM OPERATORS' ASSOCIATION (APOA)).

Calgary, Alberta : Canadian Petroleum Association, 1983.
pp. 125-134.

333.823 05 Arc 1983

This document addresses concerns regarding the direct discharge of drilling mud and cuttings into Arctic waters. (The practice of disposing of drilling waste through discharge and dispersion in the sea is a world-wide one because it is practical and economical.) The author examines concerns in two main areas - short term effects in the immediate zone of discharge and longer term effects caused by the accumulation of potential contaminants in the environment. The studies reported here provide data on the dispersion of the drilling waste after discharge, seafloor accumulation of the drilling waste and its toxicity. A short list of references is included with this paper.

- A 129 LATE WINTER SURVEYS OF AQUATIC RESOURCES ALONG THE IPL PIPELINE ROUTE; NORMAN WELLS NWT TO ZAMA TERMINAL, ALTA. D. McCart and P. McCart. Calgary, Alberta : Aquatic Environments Limited, 1982. 28 pp.

333.956 1 McC

It is the authors' view that winter construction of the IPL (Interprovincial Pipelines Ltd.) pipeline, from Norman Wells, N.W.T., to Zama City, Alberta, will result in some disturbance to streambeds crossed by the pipeline route. This study assesses the potential for fish overwintering in the vicinity of stream crossings and suggests mitigative measures to reduce the impact of winter construction where overwintering fish are likely to occur.

Rita Horner.
In THE ALASKAN BEAUFORT SEA, ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 295-310.

551.468 7 ALA

With the discovery of oil on the North Slope, Alaska, several studies were designed to provide baseline information on the ecology of the marine and freshwater ecosystems, with work being done primarily in shallow, nearshore environments. Referring to some of these earlier studies and to more recent work, this author discusses phytoplankton associations, chlorophyll a, and relative phytoplankton production in the area between the 20 metre depth contour and the edge of the ice in the Beaufort Sea, between Point Barrow and Demarcation Point. The paper contains a list of all phytoplankton species found in the Beaufort Sea and a list of references is provided.

- A 132 PRELIMINARY RESULTS OF A FISHERIES STUDY OF TWO FRESHWATER LAKE SYSTEMS ON THE TUKTOYAKTUK PENINSULA, NORTHWEST TERRITORIES.
W.A. Bond and R.N. Erickson.
Canada. Department of Fisheries and Oceans. Canadian Data Report of Fisheries and Aquatic Sciences No. 348.
Winnipeg, Manitoba : Canada. Department of Fisheries and Oceans. Western Region, 1982. 61 pp.

597.092 971 9 Bon

This report presents the preliminary results gathered during the first year (1981) of a two year study to determine the significance as fish habitat of the lake systems associated with Freshwater and Mayogiak Creeks, two streams draining off the Tuktoyaktuk Peninsula into Tuktoyaktuk Harbour. Specifically, the migration of several anadromous species such as broad whitefish, lake whitefish and least cisco were documented in both streams and the data collected include number of migrant fish, timing of migration, and food habits. The increase in the level of industrial activity, connected with the search for oil and gas near Tuktoyaktuk, has the potential to impede the progress of fish migrations and prohibit access to areas critical to the life histories of these fish. The intent of this study is to address any negative impacts.

- A 133 REPORT ON A LABORATORY EVALUATION OF A MIXED FUNCTION OXIDASE SYSTEM AS AN ENVIRONMENTAL MONITOR.
Shawmont Martec Ltd.
Offshore Labrador Biological Studies.
s.l. : Shawmont Martec Ltd., 1982. 1 microfiche.

MF OLABS 29

The results of preliminary studies carried out to investigate the use of the mixed function oxidase system as an environmental monitor are reported here. Capelin (smelt) eggs were exposed to fresh Hibernia crude oil and this report examines enzyme activities which occurred. After the presentation of very technical data, the conclusion is drawn that larvae and adult fish have inducible mixed function oxidase enzyme systems. These systems can be useful as tangible biological indicators for monitoring point sources of petroleum contamination in the marine environment. Tables showing enzyme activities at four day intervals, and mixed function oxidase induction in petroleum exposed larvae, are included as is a list of references.

- A 134 RESPONSE OF MARINE ANIMALS TO PETROLEUM AND SPECIFIC PETROLEUM HYDROCARBONS.
Jerry M. Neff and Jack W. Anderson.
Toronto, Ontario : John Wiley & Sons, 1981. 177 pp.

574.5 Nef

This volume is the result of extensive field and laboratory research dealing with the toxicity and sublethal biological effects of petroleum, and specific petroleum hydrocarbons, to marine organisms. The authors summarize the major results of this research and discuss them in relation to major published information. The authors suggest that, after intensive investigations, there has been increased realization that deleterious impacts of oil on the marine ecosystem may persist long after the visible oil pollution has been cleaned up or washed away. A list of references, a glossary and an index are provided.

- A 135 RESULTS OF A BROAD WHITEFISH COLLECTION IN FRESHWATER SYSTEMS ALONG THE TUKTOYAKTUK PENINSULA AND IN THE INNER MACKENZIE DELTA REGION.
N.E. Strange and D.S. MacDonnell.
Northern Oil and Gas Action Program. Project B-3: Critical Western Arctic Freshwater Habitats.
Winnipeg, Manitoba : North/South Consultants Inc., 1985. 25 pp.

639.3 Str

Prepared for the Department of Fisheries and Oceans (DFO), this Northern Oil and Gas Action Program (NOGAP) report documents the collection of broad whitefish from freshwater systems on the Tuktoyaktuk Peninsula, and in the inner Mackenzie Delta region, for delivery, fresh frozen, to the Freshwater Institute in Winnipeg for subsequent analyses. This report lists each site from which fish were collected, and records the species and the number of fish caught. Maps are included which show the collection areas and tables summarize the collection data.

- A 138 SURVEY OF FISH POPULATIONS IN KUGMALLIT BAY AND
TUKTOYAKTUK HARBOUR, NORTHWEST TERRITORIES.

Sheila C. Byers and Randolph K. Kashino.

Beaufort EIS Reference Works 1982.

s.l. : Dobrocky Seatech Ltd., 1980. 77 pp.

639.3 Bye

Commissioned by Dome Petroleum, this research report details the results of a survey of resident fish populations in Kugmallit Bay and Tuktoyaktuk Harbour. The survey was conducted to satisfy the requirements of ocean dumping permit #4443-0990, and the monitoring studies were designed to determine the presence of migrating fish and what effects dredging has on fish migratory habits. In fact, since no dredging occurred during the study period, this report is, in essence, a pre-dredging survey. However, the report does include data on other studies carried out at a dredge site south of the Canmar loading dock and at three proposed sites. A short bibliography is included as well as numerous tables and some photographs.

A 139 A SURVEY OF THE COASTAL FISHES OF THE SOUTHEASTERN BEAUFORT SEA.

M.J. Lawrence, G. Lacho and S. Davies.

Canada. Department of Fisheries and Oceans. Canadian Technical Report of Fisheries and Aquatic Sciences No. 1220.

Winnipeg, Manitoba : Canada. Western Region, Department of Fisheries and Oceans, 1984. 178 pp.

597.092 87 Law

This report describes the results of the 1978-80 fisheries surveys of the coastal, freshwater and estuarine environments in the vicinity of the Mackenzie Delta, during open-water season. The survey results present information on the life history, biology and ecology of fish of the area, to better enable protection and management of regional fish resources in view of present and forecast economic expansion and development. The majority of this report is in tabular format and there is considerable use made of graphs. A list of references is provided.

A 140 "Temperature Preference of Juvenile Arctic Cisco (Coregonus autumnalis) from the Alaskan Beaufort Sea."

Robert G. Fechhelm, William H. Neill and Benny J. Galloway.

In CONTRIBUTIONS TO THE SCIENCE OF ENVIRONMENTAL IMPACT ASSESSMENT: THREE PAPERS ON THE ARCTIC CISCO (COREGONUS AUTUMNALIS) OF NORTHERN ALASKA.

edited by D.W. Norton.

Biological Papers of the University of Alaska. Number 21.

Fairbanks, Alaska : Institute of Arctic Biology, University of Alaska, 1983. pp. 24-38.

333.956 1 Con

This article reports on a laboratory study conducted to determine the temperature preference of juvenile Arctic cisco as a function of both acclimation temperature and salinity. Apparatus used to measure temperature preferences is described and the results, which are consistent with observed summer distribution of Arctic cisco in the Alaskan Beaufort Sea, show that the fish concentrate near shore in a narrow band of relatively warm, moderately saline water. A list of literature cited is included.

A 141 TINGMIARK K-91 AND KOPANOAR D-14: A CHEMICAL STUDY ONE YEAR AFTER THE OCCURRENCE OF WATER FLOW JULY 1978.

David J. Thomas.

Beaufort EIS Reference Works 1982.

Sidney, British Columbia : Seakem Oceanography Ltd., 1978.

126 pp.

333.955 Tho

This volume, prepared for Canmar, discusses a mainly chemical sampling program which was conducted in July 1978, at Tingmiark K-91 and Kopanoar D-14, as part of a continuing assessment of the glory hole areas since the occurrence of water flow in 1979. The main objectives of this program are to determine whether or not heat and water seepage have changed since 1977 and to assess the effects that the waterflows had or continue to have on the environmental quality in the vicinity of the sites. A summary and interpretation of the findings are presented and, where possible, a comparison with 1977 data is included.

HYDROLOGY AND CLIMATE

- A 145 AN ANALYSIS OF CURRENT METER DATA OBTAINED AT CANMAR DRILLSHIPS 1976-1979.
D.B. Fissel.
Beaufort EIS Support Document 1982.
Sidney, British Columbia : Arctic Sciences Limited, 1981. 126 pp.

551.470 22 Fis

Dome Petroleum Limited, through its subsidiary Canmar, has been engaged in offshore drilling for oil in the Beaufort Sea since 1976. During the course of the drilling operations, measurement of near surface and subsurface currents have been routinely collected from the drilling ships, along with measurements of environmental factors including meteorological and wave data. These data are analysed in this report with a view to providing an improved understanding of environmental factors as they relate to the effect on the environment of offshore operations.

A 146 ANALYSIS OF INTERACTION PROBABILITIES BETWEEN LARGE ICE FEATURES AND OFFSHORE STRUCTURES IN THE CANADIAN BEAUFORT SEA.

S. De Paoli, T.B. Morrison, and R.W. Marcellus.
Beaufort EIS Reference Works 1982.
s.l. : s.n., 1982. 101 pp.

622.182 82 DeP

Many different shapes and sizes of ice features will interact with an offshore production structure during the approximately 25-30 years of expected life of the structure. The authors, who represent Dome Petroleum Limited and Canadian Marine Engineering Limited (Canmar), examine and discuss a study which was undertaken to estimate the frequency of large ice feature/offshore production structure interactions in the southern Beaufort Sea, for inclusion in ice design criteria for offshore structures. Ice islands and multi-year hummock fields are considered here, including the formation, number and probability of interaction with offshore structures.

A 147 ASSESSMENT OF MARINE RADARS FOR THE DETECTION OF ICE AND ICEBERGS.

Joseph P. Ryan, Michael Harvey and Andrew Kent.
Environmental Studies Revolving Funds Report No. 008.
Ottawa, Ontario : Environmental Studies Revolving Funds, 1985.
127 pp.

623.856 48 Rya

The major objective of this study is to provide a quantitative assessment of the iceberg detection capability of present marine radars, with particular emphasis on bergy bits and growlers. The field investigation conducted to determine environmental effects on propagation and detection, and the relationship between the iceberg above-water size and its radar cross-section is described. Data analysis and recommendations conclude this Environmental Studies Revolving Funds (ESRF) report.

A 148 ATLAS OF THE BEAUFORT SEA.
Ivan M. Lissauer, L.E. Hachmeister and B.J. Morson.
United States Coast Guard Report No. CG-D-33-84.
Springfield, Virginia : National Technical Information Service, 1984.
various pag.

912.196 327 Lis

Prepared for the United States Coast Guard, Office of Research and Development, this is a reference document on oceanography, meteorology, ice and climatology in the Beaufort Sea area. From a review of information on these topics, maps have been generated showing circulation in typical wind conditions. These maps show tides, storm surges, bathymetry and charts of mean ice drifts over time. The meteorology section contains information on winds, storm surges and waves, and a rapid manual forecast system for estimating the height of a storm surge is included. Charts and maps are used to illustrate the text and a list of references is provided.

A 149 BEAUFORT SEA ENVIRONMENTAL OBSERVATION/PREDICTION SYSTEM: TECHNICAL AND FINANCIAL REPORT. 1977, 1978.
Canada. Atmospheric Environment Service. Arctic Weather Centre.
Edmonton, Alberta : Canada. Atmospheric Environment Service, 1977, 1978. various pag.

551.691 632 7 BOPS

The annual report of the Beaufort Observation/Prediction system is presented here. This system is operated to support offshore drilling and platform island construction by providing warnings of hazardous weather, wave or ice conditions which might threaten operations or represent a risk to the environment, and to provide observation, consultation and training services to the users of the system. The report presents details of the structure of the Beaufort Observation/Prediction System and outlines the operational and organizational aspects of the program.

- A 150 BEAUFORT SEA EXTREME WAVE STUDIES ASSESSMENT.
Alan Murray and Marc Maes.
Environmental Studies Revolving Funds Report No. 023.
Ottawa, Ontario : Det norske Veritas (Canada) Limited, 1986. 97 pp.

551.470 22 Mur

In this report, funded by the Environmental Studies Revolving Funds (ESRF), two studies, undertaken to quantify the worst sea states in the Beaufort Sea for the purpose of establishing suitable design criteria, are reviewed. There is considerable disparity between the two studies in their estimates of extreme wave heights for deep water conditions although for shallow water the agreement is more favourable. The purpose of this assessment is to explain and, where possible, reconcile differences through a comparison of the methods and assessment of the data used. Tables, charts and graphs are included and there is a list of references.

This report presents the results of the analysis of RAMS buoy positional data for ice movement in the Beaufort Sea, collected between November 1977 and June 1978, by Gulf, Canmar and the federal government. The ice movement information is presented entirely in tabular and graphic format.

ice, sea / Beaufort Sea / Gulf / Canmar / government / EIS

- A 152 BEAUFORT SEA ICE STEREO PHOTO ANALYSIS 1976-77.
B.D. Wright and D.L. Schwab.
Beaufort EIS Reference Works 1982.
s.l. : s.n., 1979. n.p.

551.343 Wri

This report presents the results of an analysis of Beaufort Sea three dimensional aerial photographs. The photographs were taken by Esso Resources Canada during the winter of 1976-77. The details of ice location, type, ridge height and ice floe size are presented in tabular and graphic format and maps are included to illustrate the study area and to summarize the content of the analyses.

- A 154 CANADIAN BEAUFORT SEA 1984 REPETITIVE MAPPING OF ICE SCOUR.

J. Shearer, B. Laroche and G. Fortin.
Environmental Studies Revolving Funds Report No. 032.
Ottawa, Ontario : Environmental Studies Revolving Funds, 1986.
43 pp.

551.342 She

Ice scour tracks are sea-bed features caused by the contact with the seabed of moving ice masses. Funded by the Environmental Studies Revolving Funds (ESRF), this study documents a survey carried out in the Beaufort Sea, with wide-scan sonar equipment, to study the frequency of new scouring events and to examine the changes in physical characteristics of a number of selected scours. Numerous maps and graphs are included and there is a list of references.

A 155 CANMAR - SUMMER'S HARBOUR COALDUSTING OPERATIONS 1979:
ENVIRONMENTAL MONTORING.

David J. Thomas.

Beaufort EIS Reference Works 1982.

Inuvik, Northwest Territories : Arctic Laboratories Limited, 1979.

33 pp.

333.916 41 Thom

In May 1979, coal dust was broadcast along a route over the ice leading from Summer's Harbour, Booth Island, N.W.T., seaward past Cape Parry, to encourage premature weakening of sea ice. This environmental impact reference work, prepared under contract to Canadian Marine Drilling Limited (Canmar), describes the methods and results of a sampling to determine any environmental impact on the water column or sediments following the use of the coal dust. Much of the information is presented in tabular format and a list of references is provided.

A 156 THE CLIMATE OF ARCTIC CANADA IN A $2XCO_2$ WORLD
[UNPUBLISHED MANUSCRIPT].

R.C. Harvey.

Canada. Atmospheric Environment Service. Canadian Climate Centre Report No. 82-5.

Downsview, Ontario : Canada. Atmospheric Environment Service, 1982. 21 pp.

574.54 Har

The author of this unpublished manuscript examines the possible effects of an increase in atmospheric carbon dioxide concentration upon the climate of the Arctic, particularly Arctic Canada (Canada north of $60^{\circ}N$). The problem of deducing the possible changes in climate, under an increase in the carbon dioxide concentration, is approached by applying an analog method in which historic and prehistoric warm and cold periods are used to make projections of possible climate regimes that could be expected under a global warming. A lengthy list of related references is included.

A 157 THE CLIMATE OF THE CANADIAN ARCTIC ISLANDS AND ADJACENT WATERS.

J.B. Maxwell.

Canada. Atmospheric Environment Service Climatological Studies No. 30.

Ottawa, Ontario : Canada. Atmospheric Environment Service, 1980.
2 vol.

551.697 Max

This study presents a broad overview of the climatic factors pertinent to the Canadian Arctic Islands and their adjacent waters. The emphasis is on probability estimates of extremes of temperature, wind and precipitation, as well as the duration of critical weather types. Topics covered include wind chill, blizzards, sea state, sea ice and temperature inversion frequencies. Both volumes are illustrated and include maps. Each of the eight sections contains a list of references.

A 158 CLIMATIC ATLAS OF THE OUTER CONTINENTAL SHELF WATERS AND COASTAL REGIONS OF ALASKA.

William Brower et al.

Anchorage, Alaska : Arctic Environmental Information and Data Center, University of Alaska, 1977. 3 vol.

912.798 Bro

This publication is the result of a joint project of the Arctic Environmental Information and Data Center (AEIDC) and the National Climatic Centre/National Oceanic Atmosphere Administration. The project establishes current knowledge of climatological conditions in three Alaskan marine and near coastal areas that are important to resource development of the Outer Continental Shelf (OCS) - the Gulf of Alaska (volume I), the Bering Sea (volume II) and the Chukchi and Beaufort Seas (volume III). Data presented includes, mean and extreme temperatures, wind, visibility, sea level pressure, water temperature, clouds, waves, storm surges, sea ice, currents, bathymetry, and detailed weather.

- A 160 DATA RECORD OF CURRENT OBSERVATIONS: BEAUFORT SEA 1974-1976 [UNPUBLISHED MANUSCRIPT].
W.S. Huggett, M.J. Woodward and A.N. Douglas.
Canadian Hydrographic Service. Data Record of Current Observations Volume XVI.
Sidney, British Columbia : Institute of Ocean Sciences, 1977.
139 pp.

551.478 7 Hug

The information presented in this report was collected as part of the Beaufort Sea Project, a study of environmental factors in the Beaufort in relation to proposed offshore drilling for oil and gas. Current meter data from the southern Beaufort Sea for the years 1973, 1974 and 1975 are summarized and co-tidal charts are presented for the tidal streams and tides. Temperature and salinity measurements coincident with the current observations are also shown.

A 161 DISTRIBUTION OF BOWHEAD WHALES IN RELATION TO
HYDROMETEOROLOGICAL EVENTS IN THE BEAUFORT SEA.

Denis H. Thomson et al.

Environmental Studies Revolving Funds Report No. 028.

Ottawa, Ontario : LGL Limited, 1986. 119 pp.

599.51 Tho

A project of the Environmental Studies Revolving Funds (ESRF), this report reviews the general features of the southeastern Beaufort Sea, including physical oceanography and meteorology, zooplankton communities and the distribution and feeding habits of bowhead whales. Sea ice data, physical oceanographic and meteorological measurements and bowhead whale distribution in 1983 are analysed. These data are then correlated in an attempt to explain the observed distributions of bowhead whales in terms of the hydrometeorological phenomena of the Beaufort Sea.

Canada. Atmospheric Environment Service. Canadian Climate Centre Report No. 86-13.
Downsview, Ontario : Canada. Atmospheric Environment Service, 1986. various pag.

551.691 632 7 MEP

Over the 15 year period (1971-1985) a variety of climate studies were done for the Beaufort Sea area by both industry and government. This report provides a review of many of these studies to document the current extent of knowledge, identify and assess any limitations of previous studies, and identify priorities for future research. The report is addressed in particular to the needs of the oil and gas industry. Climatology study summary tables are appended and a list of references is provided.

- A 164 "Evidence of 60 Meter Deep Arctic Pressure Ridge Keels."
Erk Reimnitz, P.W. Barnes, R.L. Phillips.
In HARSH ENVIRONMENT AND DEEPWATER HANDBOOK.
Robert G. Burke.
Houston, Texas : Pennwell Publishing Company. Energy Group, 1985. pp. 41-47.

622.182 82 Har 1985

Numerous efforts have been made since the nineteen-sixties to determine the ice thickness distribution in the Arctic Ocean and, in particular, to learn the keel depth of the large or modern pressure ridges. With the discovery of oil and gas in the Arctic offshore, knowledge of the maximum ice thickness in the Continental Shelf is becoming increasingly important. In this article, the authors discuss methods of interpreting the age of deepwater gouges and measuring the depth of the gouges.

- A 165 "Fast Ice Sheet Deformation During Ice-Push and Shore Ice Ride-Up."
Lewis H. Shapiro et al.
In THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 137-157.

551.468 7 Ala

This paper presents results of field studies of shore ice pile-ups and associated deformation of the fast ice, which occurred during several ice-push events in the Point Barrow area, between 1975 and 1978. Ice-push is lateral pressure caused by expansion of shoreward-moving ice, following a rise in temperature. The authors formulate a preliminary model of the characteristics of the deformation of a landfast ice sheet during the formation of ice-push ridges and ride-ups.

- A 166 FINAL REPORT ON THE FIELD STUDIES AND AERIAL MAPPING ALONG THE NORTHWEST EDGE OF THE CANADIAN ARCHIPELAGO.
R.D. Hudson et al.
Beaufort EIS Reference Works 1982.
s.l. : s.n., 1980. various pag.

551.34 Hud

A three week field study, to investigate ice dynamics and ice features along the northwest edge of the Canadian Arctic Archipelago, is described in this support document. Fourteen ground sites were visited during the study and more than 2000 line km of aerial photography taken. Floe size and ice types from more than 24,000 floes have been analysed and presented here, providing a statistical base for the Arctic's most dynamic ice zone. Tables, charts, diagrams and photographs are provided as well as a short bibliography.

- A 167 THE FLEXURAL FAILURE OF HUMMOCK FIELDS AND LARGE FLOES AT THE SUMMER ICE EDGE IN THE BEAUFORT SEA.
Peter Wadhams.
Beaufort EIS Reference Works 1982.
s.l. : s.n., 1981. various pag.

551.343 Wad

In this technical report for Dome Petroleum Limited, wave data statistics, produced by Gulf Canada Resources, are used to generate extreme value statistics which are then used to compute the effect of Beaufort Sea waves on ice features. The likelihood of flexural failure is estimated and the maximum sizes of the fragments computed. The ice features considered are ice islands, hummocks (pressure ice characterized by haphazardly arranged mounds) and ice floes. These features present a possible threat to drilling rigs in the Beaufort Sea in summer, when strong northerly winds may cause southward excursions of the pack towards drilling structures. Many graphs and tables are used and a list of references is included.

- A 169 ICE CONCENTRATION IN THE EASTERN BEAUFORT SEA.
William Stringer et al.
Fairbanks, Alaska : Geophysical Institute, University of Alaska, 1982.
51 pp.

551.468 27 Str

This report analyses the extent and concentration of summer sea ice in the eastern Beaufort Sea, relative to Outer Continental Shelf (OCS) oil and gas activities. The study was conducted because of the Outer Continental Shelf Environmental Assessment Program's (OCSEAP) concern about the environmental aspects of 1) summer time oil spills encountering open water; 2) sea ice used for bird and mammal resting platforms occurring in areas of industrial development; and 3) the possibility of bowhead whales following the pack ice edge and their route possibly coming within a few kilometres of shore and within the zone of OCS oil and gas activities. Most of the data analyses are presented in graphic format.

- A 170 ICE CONTROL FOR ARCTIC PORTS AND HARBOURS. FINAL REPORT.
R.J. Gill and A.B. Cammaert.
Niagara Falls, Ontario : Acres Consulting Services Limited, 1983.
2 v.

627.2 Gil

This report, sponsored by the Transportation Development Centre, Transport Canada (TC) and the Canadian Marine Transportation Administration, TC, examines the types of ice problems that may occur in harbours that are operated in ice conditions. Ice control techniques, to be used in conjunction with certain design approaches, are described and evaluated, and criteria for harbour design are addressed. Volume one of the set contains the text of this final report and volume two provides an extensive annotated bibliography.

Peter W. Barnes, Douglas M. Rearic and Erk Reimnitz.
In THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 185-212.

551.468 7 Ala

This article discusses scouring of the sea floor by ice, which occurs over much of the Arctic Shelf. This scouring disrupts and modifies the seabed affecting sediments, ice zonation and petroleum development activities and occurs where sea ice comes into contact with the sea floor to form ice gouges. Development activities that place pipelines and subsea structures on the sea floor are affected by the forces involved in ice scouring. In this article, earlier work in this topic is updated, new data are summarized, and the gouging process is discussed.

- A 174 ICEBERG DYNAMICS PROJECT REPORT: VOLUME I: EXPERIMENTAL EQUIPMENT AND PROCEDURES.
edited by A.A. Bruneau and R.T. Dempster.
Calgary, Alberta : Eastcoast Petroleum Operators' Association (EPOA), 1972. 2 microfiche.

MF EPOA 2-1

This is the first of three volumes outlining the Iceberg Dynamics Project carried out off the east coast of Canada, by the Eastcoast Petroleum Operators' Association (EPOA), in 1971. This volume describes the equipment employed during the project, and how it was used. An appendix provides a complete list of the equipment and indicates distribution upon the completion of the project in June 1971. The details of modifications made to the ship used, and a diary of the cruise taken to conduct experiments, are included. Iceberg tracking is described, including wind measurements. Numerous charts and diagrams are used for illustrative purposes.

A 176 ICEBERG DYNAMICS PROJECT REPORT: VOLUME III: ICEBERG
TOWING PROCEDURES.

edited by A.A. Bruneau and R.T. Dempster.
Calgary, Alberta : Eastcoast Petroleum Operators' Association
(EPOA), 1972. 2 microfiche.

MF EPOA-2-3

In this third and final volume of the report of EPOA's Iceberg Dynamics Project, the focus is on iceberg towing. It is explained that when an iceberg in the vicinity of a drilling rig, or other stationary operation, is considered to pose a high threat of collision, the decision to tow the iceberg away from that vicinity may be made. This volume discusses iceberg drift, towing strategy and the design and use of towing equipment. A summary list of contents for all three volumes, which comprise this report, is appended to this volume.

icebergs / EPOA / drilling, offshore / oil rigs / wind / tidal currents

A 177 ICEBERG IMPACT EFFECTS ON DRILLSHIP.

Eastcoast Petroleum Operators' Association (EPOA).
Eastcoast Petroleum Operators' Association: Project #4.
Toronto, Ontario : Foundation of Canada Engineering Corporation
Ltd., 1971. 1 microfiche.

MF EPOA 4-1

This study investigates the effects of the impact of small ice floes of land ice origin on a drillship. The study was commissioned to determine the maximum size of an ice floe which may strike the hull of a drillship without causing damage. Estimates are given of forces resulting from such a collision and the size and velocity of the ice floe are varied so as to define critical conditions for ice impact on a drill vessel. The ability of the hull of a drillship to withstand forces resulting from the impact of an ice floe is evaluated. The results of this study are applicable to any region where ice floes threaten offshore activities although the experiments were carried out off the east coast of Canada.

A 178 "A Logical Approach To Ice."
K.R. Croasdale and A. Person.
In SECOND ARCTIC OFFSHORE SYMPOSIUM [TECHNICAL BRIEFS],
HOUSTON, TEXAS, APRIL 11, 1984.
Newport Beach, California : Global Marine Development Inc., 1984.
36 pp.

627.98 Arc 1984

When ice moves against a fixed structure, such as a drilling rig, it exerts a load. This paper reviews a general logic for ice loads which recognizes the various limit states that can govern ice loads on fixed structures. Various ice load formulae for narrow and wide, vertical and sloping structures are presented, together with examples, and the Canadian perspective, both in terms of ice load models and experience with actual structures, is given. Numerous diagrams are included and there is a list of references.

A 181 MECHANICAL BEHAVIOR OF SEA ICE.

M. Mellor.

U.S. Army Cold Regions Research and Engineering Laboratory Monograph 83-1.

Springfield, Virginia : U.S. National Technical Information Service, 1983. 102 pp.

551.343 Mel

This monograph, prepared as a study text and reference source for a NATO Advanced Study Institute on sea/ice/air interactions, deals with properties of sea ice that are relevant to mechanical behavior of ice on a fairly small scale. The first part of the document is a selective summary of the basic theory which is applicable to ice mechanics. Part two summarizes measured values for common mechanical properties and the third and final part discusses the mechanical behavior of ice that has been fragmented, either by natural processes or human activities. The text is technical in nature, supplemented by charts and graphs, and a list of references cited is included.

- A 182 "Mesoscale Wind Phenomena Along the Alaskan Beaufort Sea Coast."
Thomas L. Kozo.
In THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 23-45.

551.468 7 Ala

Wind is a major influence on the physical and biological environment of the Alaskan Beaufort Sea. Surface wind conditions influence the times of sea ice break-up or freeze-up, create nearshore currents, move ice floes and oil spills, and affect animal migrations. This article discusses the subsynoptic meteorological networks along the Beaufort Sea coast and shelf, thermally generated mesoscale effects on surface winds, and orographic mesoscale effects on surface winds. Charts and diagrams are used throughout and a list of references is included.

- A 184 "Observations and Analyses of Sediment-Laden Sea Ice."
Thomas E. Osterkamp and Joan P. Gosink.
In THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 73-93.

551.468 7 Ala

The effects of sediment in ice on light transmission through sea ice cover is examined in this paper. As well, the results and analyses of tests on sediment-laden sea ice cores, and ice samples from the Alaskan Beaufort Sea, and theoretical analyses of the scavenging and filtration processes for entraining sediment in sea ice are discussed. Motion of sediment-laden sea ice may be a notable sediment transport agent and this factor may have significance in the transportation of pollutants such as drilling mud, oil or dredge spoils. This fairly technical paper includes charts and graphs and a list of references.

620.411 3 Off 1985

Exploitation of resources in the northern and eastern coastal regions of Canada requires the use of structures such as offshore platforms, docking facilities and small ships. When these structures are exposed to freezing sea spray, the resulting ice accumulations can appreciably increase static and wind loads on fixed structures and influence the stability of floating structures. In this paper the authors discuss current research in marine icing and evaluate these efforts in terms of the differences such as salinity, droplet size and the dynamics of runback.

edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 159-183.

551.468 7 Ala

Piles of grounded ice on shoals, called stamukhi, protect the inner Alaska Continental Shelf from pack ice forces, allow the growth of relatively smooth, immobile fast ice, and thereby indirectly facilitate the development of oil resources. (The shoals have a direct value in artificial island construction given that each vertical foot of fill costs two to three million dollars.) In this report, Landsat images have been used to show the effects of Stamukhi Shoal on winter and summer ice regimes in the past ten years. (Landsat is a U.S. artificial satellite designed to gather data about the earth's natural resources.) Seafloor morphology and its changes resulting from ice interaction are discussed.

- A 188 REVIEW OF THE ENVIRONMENTAL IMPACT STATEMENT: ALASKA HIGHWAY GAS PIPELINE IN THE YUKON TERRITORY.
Canada. Department of the Environment, Pacific and Yukon Region.
Vancouver, British Columbia : Canada. Department of the Environment, 1979. various pag.

330.971 91 IWD

This document presents a Department of the Environment (DOE) review of the Foothills Pipe Lines (South Yukon) Ltd. (FPL(SY)) environmental impact statement (EIS) relative to the Alaska Highway Gas Pipeline (AHGP) proposal. The emphasis is on hydrologic factors along the proposed route and this review examines FPL(SY)'s identification of environmental concerns, proposals for mitigation of the concerns and methods and data upon which these proposals are based.

- A 189 "Risk Analysis Methodology for Mobile Offshore Units Operating in Ice Infested Waters."
M.A. Nessim et al.
In ICE TECH '84. THIRD INTERNATIONAL CONFERENCE ON ICE-BREAKING AND RELATED TECHNOLOGIES [PROCEEDINGS], CALGARY, MAY 1984.
s.l. : Society of Naval Architects and Marine Engineers, 1984.
pp. H1-H12.

623.812 4 Int 1984

A mobile offshore unit can be moved off location to avoid collision with ice features. However, if the unit is ice-strengthened, it is not necessary to avoid all ice collisions. This technical paper deals with the probabilities of collisions, ice monitoring and disconnection criteria for the mobile units in the case of large ice features. The consequences of ice/mobile offshore unit collisions are examined and two scenarios are considered - permissible collisions with ice features which do not exceed a specified disconnection criterion, and catastrophic collisions with larger ice features which occur if ice monitoring/disconnection systems fail. The paper concentrates on environmental uncertainties associated with the occurrence, size and velocity of ice features. Diagrams are included as is a list of references.

- A 190 SEA ICE MORPHOLOGY IN THE BEAUFORT SEA.
Peter Wadhams.
Beaufort Sea Project. Technical Report No. 36.
Victoria, British Columbia : Canada. Department of the Environment, 1975. 66 pp.

551.343 Wadh

Produced under contract to the Ocean and Aquatic Sciences Division of the Department of the Environment (DOE), this technical report describes the topography of the Beaufort Sea ice cover. Studies conducted during the summer of 1974, and the early spring of 1975, are documented here and the results are analysed in some detail. The author then discusses the extent to which sea ice deformation features may govern the long-term spread of oil (from an oil spill or blowout) under ice. This report includes numerous illustrations and a list of references is provided.

- A 191 SHORE ICE RIDE-UP AND PILE-UP FEATURES PART I: ALASKA'S BEAUFORT SEA COAST.
Austin Kovacs.
U.S. Army Cold Regions Research and Engineering Laboratory.
CRREL Report 83-9.
Hanover, New Hampshire : U.S. Army Cold Regions Research and Engineering Laboratory, 1983. 59 pp.

551.34 Kov Pt. 1

Recent observations of shore ice pile-up and ride-up along the coast of the Alaskan Beaufort Sea are presented here. Information is given to show that sea ice movement on shore has in the past overridden steep coastal bluffs and has thrust inland over 150m, gouging into and pushing up mounds of beach sand, gravel, boulders and peat and, inland, the tundra material. The resulting ice scar morphology is found to remain for tens of years. The report is illustrated throughout and a list of references cited is provided.

ice / Beaufort Sea, Alaskan / ice, sea / ice scour / morphology / tundra / Arctic / beaches

- A 192 SHORE ICE RIDE-UP AND PILE-UP FEATURES PART II: ALASKA'S BEAUFORT SEA COAST - 1983 AND 1984.

Because of their importance to offshore design in Arctic areas, ice-produced gouges have been the subject of a number of investigations, especially since they were recognized as a recurring seafloor feature in the shallow parts of ice-covered seas. This report discusses some random-appearing aspects of the ice-produced gouges that occur along the coast of the Alaskan Beaufort Sea, between Smith Bay and Camden Bay. Seven years of data, obtained between 1972 and 1979, are used in this study which addresses gouge depths, orientation, frequency and the application of the data accumulated to offshore design concepts. A list of references is included.

551.343 Wen

In the summer of 1975 the sea ice conditions between Point Barrow and Prudhoe Bay, Alaska, were the most severe since 1898, when the ice did not move away from shore at all. In 1975 the ice movement started later than in any year since that time and was incomplete. This report discusses the meteorological aspects of this situation and the economic ramifications because the need to resupply the Prudhoe Bay oil fields by barges could not be met as planned. The authors present the reasons for these unusual ice conditions, using illustrations to supplement the text. A list of references is provided.

Sea spray ice accretion on the superstructures of drilling structures, ships and service vessels can be very dangerous, and this phenomenon can occur very rapidly. This paper describes U.S. Department of Energy sponsored research which is focused on the characterization of naturally-formed spray ice and the determination of the mechanical properties of the bond between sea spray ice and potentially useful coatings. Salinity, density and structure of spray ice examples are examined. It is reported that weather strongly influences the accumulation of natural sea ice accretion, and the four types of ice which can form. A list of references is provided and there are numerous illustrations.

Sea ice ridges constitute one of the major hazards to hydrocarbon exploration and production in the Beaufort Sea. (Normal surface transportation is virtually impossible in heavily ridged seas; oil rig and pipeline design concepts must consider sea ice ridges.) The purpose of this paper is to increase the small data base and understanding of morphological features of free floating ice ridges. The Prudhoe Bay field data include geometry of ridges and measurements of the blocks incorporated in them. Ridge height and widths are examined as well as slope angles, variations of ice-block thickness within a ridge, and the top-surface area of measured blocks. This paper is illustrated and a list of references is included.

A 200 A STUDY OF ICE CONDITIONS ALONG A YEAR ROUND SHIPPING ROUTE FROM THE BERING STRAIT TO THE CANADIAN BEAUFORT SEA.

D.F. Dickins Engineering Consulting.

Beaufort EIS Reference Works 1982.

Yellowknife, Northwest Territories : D.F. Dickins Engineering Consulting, 1979. various pag.

551.342 Dic

Prepared for Canadian Marine Drilling Ltd. (Canmar), this report examines ice conditions along a 1700 kilometer year-round marine shipping route, from Bering Strait to the Canadian Beaufort Sea. The ice conditions are evaluated using over 400 satellite images, all available ice charts, and other related published data. 1975 is discussed as an extreme year and compared with probability statistics. The study concludes that for at least nine years out of ten, multi-year ice will not be a significant factor in hindering vessel transit but in an extreme year may entail delays in the order of 40 to 70 hours on any given shipment. Appendices, including a list of references, tables, summary sheets and graphs, make up more than one-half of this report.

Albery, Pullerits, Dickson & Associates.
Beaufort EIS Support Document 1982.
Don Mills, Ontario : Albery, Pullerits, Dickson & Associates, 1978.
27 pp.

551.468 7 Alb

The summaries of sea ice and surface weather data presented in this support document were prepared as the first phase of a study to evaluate the economic feasibility of shipping oil from Tuktoyaktuk, on the Beaufort Sea, to Bridport Inlet on Melville Island. The principal objective of the ice analysis is to generate parameters which could be used in assessing ship transit times and in establishing vessel design criteria. The data base from which information for analysis was taken included Landsat (a U.S. land based satellite) imagery. The study results are presented on summary sheets which tabulate ice concentrations and thickness of ice and all interpretation of the data is aimed at finding the most favourable shipping route. The report, which was prepared for Dome Petroleum Limited, is illustrated and contains a list of references.

This study, conducted in the Northeast Pacific, consists of three major facets: 1) acquisition of marine structure icing data; 2) integration and correlation of the factors that affect icing accumulation rates; and 3) application of the correlations so that the mariner or forecaster can accurately predict icing accumulation rates. The report defines marine structures as ships, boats, stationary drillships, or any structure surrounded by or in proximity of the ocean. Included in the report are charts which were developed to predict icing accumulation rates, a map depicting probable areas of most frequent and most heavy icing, and a list of references.

A 203 UNDERSTANDING THE ARCTIC SEA FLOOR FOR ENGINEERING
PURPOSES.

National Research Council: Committee on Arctic Seafloor Engineering.
U.S. Army Corps of Engineers Special Report 83-25.
Washington, Dist. of Columbia : National Academy Press, 1982.
141 pp.

624.15 Nat

This report identifies and assesses those Arctic sea floor phenomena that influence the design and operation of facilities and platforms for exploring and producing oil, gas and hard minerals both on and under the sea floor. The effects of thaw subsidence, erosion, permafrost (which is found extensively beneath the sea floor of the Beaufort Sea) and frost heave are examined. Concerns regarding the coupling effects of wave and ice forces with sea floor-founded structures are identified and while they are closely examined in this report, recommendations for further study in this area are made. A list of references is included.

PRESENTED]. EDMONTON, ALBERTA, SEPTEMBER 14-16, 1981.
s.l. : s.n., 1981. n.p.

622.182 82 CODD 1981

Two basic methods are available to estimate ice scour on natural oceanbeds: 1) statistics derived from scour records; and 2) scour depths estimated from the physics of ice-water-soil interaction. On natural oceanbeds, scour marks have been shown to provide reasonable basis for estimating scour with a given frequency in a given location. The methods to apply survey records to estimate scour depths with various risks are discussed in this paper and several idealized mathematical models are presented.

The Mackenzie River basin has been undergoing extensive natural resource development activity in recent years. This report is submitted in support of the belief that a knowledge base of the northern environment is needed upon which to build policies to ensure biological health in the region. Prepared for the Mackenzie River Basin Committee, the report describes the general state, seasonal and spatial trends of physical, chemical, nutrient, metal and organic contaminant parameters of the major subbasins of the Mackenzie River basin. Changes to the present monitoring design and strategy, particularly in sampling procedures, are recommended to increase the amount of information that can be obtained from collected data.

A 206 WINDS, WAVES AND STORMS IN THE SOUTHERN BEAUFORT SEA: A SPECIAL REPORT FOR ELF OIL EXPLORATION AND PRODUCTION CANADA LTD.

John C. Freeman et al.

Houston, Texas : Institute for Storm Research, 1971. 14 microfiche.

MF APOA 13-2

This report presents meteorological and oceanographic information useful in planning offshore operations in the southern Beaufort Sea. The data was compiled for Elf Oil Exploration and Production Canada Ltd. In three volumes, the information is presented in the form of narratives, tables, charts and graphs for both usual and extreme weather conditions, consisting of wind, waves and general climatological information. The report is based on 15 years of collected data from 1954-1968. Each volume consists largely of charts and tables. Volume I covers wind distribution, volume II wave distribution and duration, and volume III storm conditions, calibration of forecast methods for the Beaufort Sea and a calendar of extremes for winds and waves. Volume I contains a list of contents for all three volumes.

A 207 AERIAL SURVEYS OF BOWHEAD WHALES AND OTHER MARINE MAMMALS.

Wayne E. Renaud and Rolph A. Davis.

Beaufort EIS Reference Works 1982.

Toronto, Ontario : LGL Environmental Research Associates, 1981.

55 pp.

639.979 5 Ren

In August and September 1980, three aerial surveys of waters north of Tuktoyaktuk Peninsula were carried out, for Dome Petroleum Limited, to assess the use of these waters by bowhead whales, which are recognized internationally as an endangered species. The study area includes a proposed site for construction of an artificial island to ascertain numbers, distribution and movement patterns of bowhead whales in the area, prior to construction. The results of the surveys are presented in this report and information is also provided on ringed seals seen in the study area. Maps, tables, charts and photographs illustrate this report and a list of references is included.

A 208 AERIAL SURVEYS OF ENDANGERED WHALES IN THE BEAUFORT SEA, CHUKCHI SEA, AND NORTH BERING SEA: FINAL REPORT, FALL 1980.

D.K. Ljungblad.

Prepared for the Bureau of Land Management.

NOSC Technical Document No. 449.

San Diego, California : Naval Ocean Systems Center, 1981. 294 pp.

639.979 5 Lju

Aerial surveys of bowhead whales, and other marine mammals, were carried out from 17 April to 4 November 1980 in the Beaufort, Chukchi and Bering Seas. The object of the study was to investigate the occurrence, population density, distribution and behavior patterns of the whales in and about the Beaufort Sea oil lease areas, and the results are given in considerable detail. The background to the study and the methods applied are explained and a large number of graphs outline flight details and sightings.

Aerial surveys and acoustic recordings of bowhead whales and, secondarily, other marine mammals, which were made from mid-April through mid-May and mid-July through October 1984 in the northern Bering, eastern Chukchi and Alaskan Beaufort Seas, are the subject of this report. The 1984 investigations of the distribution, abundance, and behavior of endangered whales are summarized and polar bear, walrus and ringed seal sightings are recorded. These surveys have been ongoing since 1979 and this report includes a review of the data gathered on aerial surveys between 1979 and 1984. A major portion of this document consists of charts and tables. References are provided.

Documented here are the results of aerial surveys, conducted in the southeast Beaufort Sea, to note the abundance and distribution of bowhead whales in relation to industrial activity. The survey design and procedures are described and the results are reproduced in considerable detail in the text, maps and charts. A comprehensive list of references is included.

A 220 DIET OF RINGED SEALS (PHOCA HISPIDA) IN THE CANADIAN HIGH ARCTIC.

Michael W. Bradstreet and Kerwin J. Finley.

Toronto, Ontario : LGL Environmental Research Associates, 1983.

28 pp.

599.748 Bra

Prepared for Petro-Canada Exploration Inc. this report discusses the diet of ringed seals based on samples taken at Pond Inlet, Baffin Island and Ellesmere Island. The results of analyses of stomach weights and stomach contents are examined and the authors consider regional, local, seasonal, age-related and sex-related differences in diet. The document includes many tables and a list of references is provided.

- A 221 THE DISTRIBUTION AND ABUNDANCE OF RINGED AND BEARDED SEALS IN THE EASTERN BEAUFORT SEA, 1974-1979.
Ian Stirling, M.C.S. Kingsley and Wendy Calvert.
Beaufort EIS Reference Works 1982.
Edmonton, Alberta : Canadian Wildlife Service, 1981. 70 pp.

333.959 Sti

Prepared for Dome Petroleum Limited, Esso Resources Canada Limited and the Department of Indian Affairs and Northern Development (DIAND), this Environmental Impact Statement (EIS) support document provides baseline information on the distribution and abundance of ringed and bearded seals in the eastern Beaufort Sea. The authors also identify critical areas and times in the annual cycles of the seals that might warrant protection from, or modification of, hydrocarbon exploration and production activities. The results of aerial surveys of the seals over six years are analysed. A list of references cited is provided.

- A 222 DISTRIBUTION AND ABUNDANCE OF SEALS IN THE BEAUFORT SEA, AMUNDSEN GULF, AND PRINCE ALBERT SOUND, 1984.
Michael C.S. Kingsley.
Environmental Studies Revolving Funds Report No. 025.
Ottawa, Ontario : Canada. Department of Fisheries and Oceans, 1986.
16 pp.

333.959 Kin

This study reports the results of ringed seal monitoring surveys, flown over the Beaufort Sea, and provides information on ice conditions and seal population figures in the Beaufort Sea, Amundsen Gulf and Prince Albert Sound. The ringed seal is a widespread inhabitant of Arctic seas, being well adapted to live in unbroken fast ice. It is also a prominent component of the Arctic marine ecosystem in which it is a staple food of the polar bear. Because of its intrinsic importance and because any serious disruption in the marine ecosystem would affect populations of such a species - a large mammal near the top of the food chain - the ringed seal was selected as the subject species for this environmental baseline and monitoring study.

- A 224 DISTRIBUTION OF BOWHEAD WHALES AND OTHER MARINE MAMMALS IN THE SOUTHEAST BEAUFORT SEA AUGUST-SEPTEMBER 1983.

Peter J. McLaren and Rolph A. Davis.

Environmental Studies Revolving Funds Report No. 001.

Toronto, Ontario : LGL Limited, 1985. 62 pp.

333.959 McL

This volume reports on aerial surveys which were conducted in the southeast Beaufort Sea to document the numbers and distributions of bowhead whales and other marine mammals. The study area is defined and the results of the surveys are presented here, with the use of maps and tables. This research was sponsored by the Environmental Studies Revolving Funds (ESRF) in response to concerns about the possible disturbance of marine mammals caused by industrial activities, including hydrocarbon exploration, in the region.

- A 225 THE DISTRIBUTION OF RINGED SEALS IN RELATION TO WINTER ICEBREAKING ACTIVITIES NEAR MCKINLEY BAY, N.W.T. JANUARY-JUNE 1980.

W. George Alliston.

Beaufort EIS Reference Works 1982.

Toronto, Ontario : LGL Limited, 1980. 52 pp.

333.959 All

Prepared for Dome Petroleum Limited, this support document reports on a study designed to determine the possible influences of winter ice-breaking activity in the landfast ice off McKinley Bay, Tuktoyaktuk Peninsula, on the distribution of ringed seals during winter and the spring haul-out period. A comparison is made between an area where ice-breaking had occurred, with an adjacent control area where no ice-breaking activity took place. The methods employed to conduct the study are described and the results are discussed. A list of literature cited is included.

This unpublished reprint documents behavioral responses of bowhead whales to activities associated with offshore oil and gas exploration and development which were observed in the Canadian Beaufort Sea during August 1982. The short-term behavioral reactions of bowheads to noise and other stimuli are assessed, including boat and aircraft traffic, seismic exploration, dredging and drilling. The methods employed to conduct the tests, results obtained, and observations made are discussed. A list of literature cited is provided.

A 228 GUIDE TO WATCHING WHALES IN CANADA.

Mimi Breton.

Ottawa, Ontario : Canada. Department of Fisheries and Oceans, 1986.
54 pp.

Pam 1986-79

Intended for the general reader, this illustrated booklet presents guidelines for use by whale watchers at various locations throughout Canada. The intent of the guidelines is to avoid disturbance to whales' traditional feeding, mating and migration areas. Information on distinguishing whale groups and identifying species is included as well as descriptions of the species, notes on their status (endangered or otherwise), habitat, feeding habits, reproduction, behavioral patterns and swimming speeds. A short list of suggested reading is included.

A 229 "Impact of Oil Production on Marine Mammals."

A.W. Mansfield.

In PROCEEDINGS OF THE NINTH ENVIRONMENTAL WORKSHOP,
FAIRMONT, B.C., MAY 4-7, 1980.

Arctic Petroleum Operators' Association (APOA) et al.

Calgary, Alberta : Arctic Institute of North America, University of
Calgary, 1980. pp. 334-353.

333.823 05 Arc 1980

This paper discusses the effects of oil spills and oil production, especially shipping, on marine mammals. The mammals considered are whales and seals although brief mention is made of the sea otter and the walrus. Specific effects on the mammals' habitat and population figures are discussed and there is a brief reference to previous unsatisfactory environmental studies on marine mammals. The need for a clear statement of the possible hazards to a species, or a population, is expressed together with the need to plan carefully to mitigate these hazards.

A 230 INFLUENCE OF THE NORMAN WELLS OILFIELD EXPANSION PROJECT ON SNOW GEESE.

P.N. Boothroyd.

Winnipeg, Manitoba : Canadian Wildlife Service, 1986. 60 pp.

333.958 Boo

This report marks the completion of a three year study on the influence of Esso's expansion project at Norman Wells on spring use of local staging habitats by snow geese. (Esso's expansion project involves the construction of six production islands in the Mackenzie Delta, the drilling of nearly 200 wells and installation of a pipeline gathering system for transportation purposes.) The results of aerial waterfowl surveys of the Mackenzie River are reported and compared to earlier observations. The influence of the oilfield expansion project is considered to be minor and short term. Recommendations are given pertaining to the control of helicopter flights during each spring breakup period over the life of the project. Diagrams are included and there is a short list of references cited.

A 233 THE LIFE OF THE RINGED SEAL.

Helen Gerson and Richard Gerson.

Toronto, Ontario : World Wildlife Fund Canada and Canada. Department of Fisheries and Oceans, 1986. n.p.

599.746 Ger

The ringed seal, which is found all across the Arctic, provides the Inuit people with meat, fuel, and skins for clothing. It is the ringed seal that has allowed the Inuit culture to become established and to survive in the harsh environment of the Arctic. The information in this booklet is based mainly on studies conducted prior to 1980, as well as on Inuit knowledge, and it provides an understanding of the life history of the ringed seal and population size estimates. The brochure is illustrated and the text is presented in English and Syllabics.

- A 234 OBSERVATIONS ON THE BEHAVIOR OF BOWHEAD WHALES IN THE PRESENCE OF OPERATING SEISMIC EXPLORATION VESSELS IN THE ALASKAN BEAUFORT SEA.
Donald K. Ljungblad et al.
OCS Study MMS 85-0076.
Anchorage, Alaska : United States Minerals Management Service, 1985. various pag.

333.959 Lju

This document was prepared for the United States Minerals Management Service, Alaska Outer Continental Shelf (OCS) Region. The object of this study was to gauge bowhead whale behavioral response to seismic activities and to determine at what distance from an active geophysical vessel, emitting low frequency, high energy seismic sounds, avoidance behaviors or other manifestations of disturbance are likely to be displayed by bowhead whales. The general approach of the experiments was to place an aircraft and scientific team in the field to locate the whales, and observe and measure whale behavior, waterborne noise, and environmental variables while controlling, via radio communication, the operation of the vessel selected for each of the experiments. The findings of these experiments are presented here in detail and a list of references is provided.

- A 235 "Observations on the Behavior of the Bowhead Whale (balaena mysticetus), in the presence of an operating seismic exploration vessel in the Alaskan Beaufort Sea (preliminary)."
Donald Ljungblad, Steven Swartz and Bernd Wursig.
In PROCEEDINGS OF THE WORKSHOP ON EFFECTS OF EXPLOSIVES USE IN THE MARINE ENVIRONMENT. JANUARY 29 TO 31, 1985, HALIFAX.
edited by G.D. Greene, F.R. Engelhardt and R.J. Paterson.
Canada Oil and Gas Lands Administration (COGLA). Environmental Protection Branch. Technical Report No. 5.
s.l. : Canada Oil and Gas Lands Administration, 1985. pp. 234-245.

622.17 Wor

This paper documents observations on the behavior of bowhead whales, with a view to identifying a "zone of influence" that likely exists around any source of low-frequency, high energy seismic sounds. The objective of the study is to quantify the distance at which bowhead whales display an avoidance or other reaction to an operating geophysical vessel. The study looks at surfacing, diving, respiration, rate and direction of movement, vocalizations and other behavioral patterns of bowheads while they are being directly approached by operating vessels. The scope of the study is fairly wide and this paper outlines several of the study's experiments.

- A 237 PEARY CARIBOU AND MUSKOXEN AND PANARCTIC'S SEISMIC
OPERATIONS ON BATHURST ISLAND, N.W.T. 1974.
F.F. Slaney & Company Limited.
Vancouver, British Columbia : Panarctic Oils Limited, 1975.
various pag.

333.959 Sla

Panarctic Oils Limited has conducted winter seismic exploration programs on Bathurst Island since 1973. This report documents a study conducted on the interaction of these winter seismic activities with Peary caribou and muskoxen. The object of the study is to identify specific environmental concerns. The physical, biological and demographic characteristics of the area are described and information on populations and herd units is given in some detail. Numerous tables present the results of the observations; maps and photographs are included and there is a list of references cited.

- A 238 POLAR BEAR: LIFE HISTORY AND KNOWN DISTRIBUTION OF POLAR
BEAR IN THE NORTHWEST TERRITORIES.
D.R. Urquhart and R.E. Schweinsburg.
[Yellowknife, Northwest Territories] : Northwest Territories.
Renewable Resources, 1984. 70 pp.

599.744 46 Urq

In this illustrated book, the taxonomy, behaviour, food habits, habitats, distribution, abundance, reproduction and mortality rates of polar bears in the Northwest Territories are examined. The distribution is divided into eight zones and for each zone the authors review population status, utilization by native peoples, the effects of industrial activities and problems related to such matters as harvest quotas, sport hunting and jurisdictional conflicts between some provinces and the Northwest Territories. The authors also discuss the history and background in terms of conservation and management of the polar bear population. A glossary is included and there is a list of literature cited.

A 241 SEALS AND SEALING IN CANADA'S NORTHERN AND ARCTIC REGIONS.

R.E.A. Stewart et al.

Canada. Department of Fisheries and Oceans. Canadian Technical Report of Fisheries and Aquatic Sciences No. 1463.

Winnipeg, Manitoba : Canada. Department of Fisheries and Oceans. Western Region, 1986. 31 pp.

639.29 Ste

Sealing in Canada has been a much publicized topic over the last decade, with attention primarily focused on the east coast seal hunt, and not on the northern and Arctic harvest. In contrast to this trend, the authors of this report outline the federal government's mandate with respect to conservation and management of pinnipeds in northern and Arctic regions and present information on seal harvest statistics for the Northwest Territories, northern Quebec and northern Labrador. Information on commercial sealing, past and present, in Canada's northern and Arctic regions is collated in this volume and the nutritional and cultural aspects of seals and sealing are discussed. A list of references is provided.

A 242 STATUS OF BOWHEAD WHALES, BOWHEAD RESEARCH, AND ALASKA ESKIMO WHALING.

Arctic Environmental Information Center.

s.l. : University of Alaska, 1979. 1 microfiche.

MF AEIDC

This report discusses the issues involved in the bowhead whale debate as it affects communities in rural Alaska that depend on whaling. Northern Alaska Eskimos remain dependent on bowhead whale hunting for their physical and cultural survival. The issues of whale quotas, who has jurisdiction over aboriginal whaling and the effects of oil and gas industrial activity on bowhead whales are addressed. The report summarizes the status of knowledge of the bowhead whale, important data gaps and future research planned to protect the whale.

- A 243 A STUDY OF GRIZZLY BEARS ON THE BARREN GROUNDS OF TUKTOYAKTUK PENINSULA AND RICHARDS ISLAND, NORTHWEST TERRITORIES, 1974 TO 1978.
J.A. Nagy et al.
s.l. : Canadian Wildlife Service, 1983. 136 pp.

599.744 46 Nag

This study was carried out in response to concerns about management of barren-ground grizzly bears in light of hydrocarbon exploration, and in view of changes in the native harvest emphasis to that of hunting grizzly bears increasingly for the revenue from the sale of hides rather than for traditional subsistence reasons. The capture and marking, physical characteristics, food habits and population dynamics of the bears are described as is the telemetry involved in tracking them for the purposes of this study. The results of the monitoring studies are presented and discussed in some detail, including comments on grizzly-human relationships in the Mackenzie Delta Region. References are provided.

- A 244 STUDYING AND MANAGING ARCTIC SEALS AND WHALES.
M. Breton, T.G. Smith and B. Kemp.
Quebec, Quebec : Canada. Department of Fisheries and Oceans, 1984.
50 pp.

PAM 1984-95

The Inuit of Northern Quebec continue to rely on marine mammals, which are critically important for the food supply and play a vital role in the cultural identity. In the past, Inuit were not directly involved with the management of wildlife resources. This situation is changing as it is recognized that cooperation between southern researchers and the Inuit is essential for the conservation of marine mammals, so that there will always be sufficient resources to meet the immediate and future needs of the Inuit. This brochure, which is illustrated in colour, introduces ideas and concerns about marine mammals shared by both the Inuit and scientists, as well as describing the life cycles of mammals and the relationship between them and the Inuit people.

A 246 WHITE WHALE - OFFSHORE EXPLORATION ACOUSTIC STUDY.

John Ford.

Beaufort EIS Reference Works 1982.

Vancouver, British Columbia : F.F. Slaney & Company Limited, 1977. various pag.

639.979 5 For

Each summer, large numbers of white whales migrate to the Mackenzie River estuary, where they appear to have their calves and are hunted by native peoples from Aklavik, Inuvik and Tuktoyaktuk. The suspected calving areas are probably very important to the species, and the whale hunt and resulting whale products play a significant role in the local culture and economy. Possible adverse effects from hydrocarbon exploration have caused concern and, in response to this concern, Imperial Oil Limited commissioned this study. Sound produced by boats, barges and other equipment are identified as a major probable source of disturbance and this report studies these sounds and their relationship to white whales. A list of references is provided and there is also a glossary.

OIL POLLUTION

A 248 ANALYSIS OF PROPONENTS' ESTIMATE OF THE CHANCE OF OIL SPILLS RESULTING FROM OIL PRODUCTION IN THE BEAUFORT SEA. PART 2 - PIPELINE VS. TANKER TRANSPORTATION: AMENDED.

Canada. Environment Canada. Computing and Applied Statistics Directorate.

Ottawa, Ontario : Computing and Applied Statistics Directorate, 1983. 33 pp.

628.168 33 CASD

This report is the second of a two part analysis and interpretation of the proponents' (Dome/Esso/Gulf) report to the [Beaufort Sea Environmental Assessment] Panel (BSEAP) entitled "oil spill risk assessment". The first part of the analysis report considered production and transportation scenarios and did not question the proponents' conventional tanker data base. In this second part, the chance of various size oil spills associated with pipeline transportation are considered and compared with the chance of various size oil spills associated with tanker transportation. In addition, some of the data base and model assumptions made by the proponents are questioned and alternative estimates of risk are made using plausible alternatives to the proponents' data base assumptions.

A 249 "Arctic Spill Response Improvements: A 1985 Review of Arctic Research and Development."

Sharon O. Hillman.

In OIL SPILL CONFERENCE; PREVENTION, BEHAVIOR, CONTROL, CLEANUP: PROCEEDINGS. LOS ANGELES, CA, FEBRUARY 25-28, 1985.

American Petroleum Institute, U.S. Environmental Protection Agency and U.S. Coast Guard.

Washington, Dist. of Columbia : American Petroleum Institute, 1985. pp. 411-414.

628.168 33 Osc

Research and development has taken place in the Alaskan Beaufort Sea to enhance the response capabilities of the oil industry in the event of oil spills. Recent additions have been made to response techniques for oil spill cleanup during all seasons, including broken ice. This paper includes a summary of major research, reviews the technology gaps in Arctic response capabilities and highlights research and development areas which would benefit from further efforts to improve overall spill response.

A 250 ASSESSMENT OF FRESHWATER IMPACTS FROM THE NORMAN WELLS OILFIELD DEVELOPMENT.

E.V.S. Consultants Ltd.

Vancouver, British Columbia : E.V.S. Consultants Ltd., 1985. 3 v.

333.956 1 EVS

This Northern Oil and Gas Action Program (NOGAP) study was prepared for the Department of the Environment (DOE). Part I of this extensive report presents: 1) the methodology and results of an analytical and field program conducted to establish essential chemical data on the effluent, cooling water, and crude oil at Esso Resources Ltd.'s Norman Wells site; 2) a review of literature on the fate and effects of oil and refinery effluents, including probable environmental impacts on the aquatic ecosystem; and 3) a design for a proposed research program identifying research needs and priorities to examine the fate and effect of hydrocarbon constituents most likely to have a deleterious impact on the Mackenzie River ecosystem. Part II of the report consists of one volume which documents field and laboratory tests relative to the study, and one volume containing appendices of supporting data (tables, questionnaires, field test data).

A 251 "The Baffin Island Oil Spill (BIOS) Project: A Summary."

Gary A. Sergy.

In OIL SPILL CONFERENCE; PREVENTION, BEHAVIOR, CONTROL, CLEANUP: PROCEEDINGS. LOS ANGELES, CA, FEBRUARY 25-28, 1985.

American Petroleum Institute, U.S. Environmental Protection Agency and U.S. Coast Guard.

Washington, Dist. of Columbia : American Petroleum Institute, 1985. pp. 571-575.

628.168 33 Osc

After four years of multidisciplinary experimental investigations in the Canadian Arctic, the Baffin Island Oil Spill (BIOS) Project successfully completed studies which address oil spill fate, effects and countermeasures. This paper discusses selective findings and conclusions of the BIOS project. In particular, the findings are relevant to decisions relating to the nearshore use of chemical dispersants and the cleanup of oiled shorelines.

Baffin Island Oil Spill Project. Working Report Series 83-7.
Ottawa, Ontario : Canada. Department of the Environment, 1984.
various pag.

628.168 33 BIOS 83-7

This publication contains two study reports on research into the effects of hydrocarbon exposure on selected Arctic benthic invertebrates. Both research studies were conducted under the auspices of the Baffin Island Oil Spill (BIOS) project - a multidisciplinary program of research on Arctic marine oil spill effects and countermeasures.

BIOS / benthic invertebrates / toxicology / Baffin Island, N.W.T. / pollution, oil / oil spills / ecology, marine / biology, aquatic / environmental impact

A 253 BEAUFORT ENVIRONMENTAL MONITORING PROJECT 1983-1984.
LGL Limited, ESL Environmental Sciences Limited, ESSA Limited.

Environmental Studies No. 34.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1985. 292 pp.

333.823 1 LGL

Prepared under contract for the Arctic Land Use Research Program, Department of Indian Affairs and Northern Development (DIAND), this report is the results of concerns that hydrocarbon development activities in the Beaufort Sea may result in adverse environmental impacts. The Beaufort Environmental Monitoring Project, initiated by DIAND and the Department of the Environment (DOE) because of these concerns, has the stated objective of providing DIAND and DOE with a technical basis for design, operation and evaluation of an environmental research and monitoring program to accompany phased hydrocarbon development in the Beaufort Sea. This report is the outcome of a succession of technical meetings, and it delineates a series of impact hypotheses relative to environmental impacts.

Robert S. Pritchard.
In THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 95-113.

551.468 7 Ala

Motions of the Beaufort Sea ice cover are of general scientific interest and of engineering importance because of ongoing petroleum development along the North Slope of Alaska. This paper discusses the question of where an oil spill in ice would be transported and regulatory agency and engineering requirements on the probability that oiled ice will be transported to a specific location. The author describes a free-drift model which is used to simulate ice motions in the Beaufort Sea and then compares these simulated motions with observed motions. This paper includes numerous charts and graphs and a list of references.

628.168 33 BIOS 83-7

Part of the Baffin Island Oil Spill (BIOS) project, this article reports on a series of experiments carried out to define the behavioral responses and the dynamics of hydrocarbon uptake and clearance in three species of benthic invertebrates - the sea urchin, the Greenland cockle and the soft-shelled clam. The experiments involved exposure to dispersed crude oil in a flow-through sea water system. The author interprets the data collected in the context of individual survival and in relation to previous BIOS experimental spill results. A list of references is included.

016.628 You

A joint Environmental Studies Revolving Funds (ESRF)/Arctic Science and Technology Information System (ASTIS) project, this bibliography contains 748 annotated citations. The subject scope covers the physical, chemical and biological fate and biological effects of petroleum and its hydrocarbon constituents. The literature types included are research reports, monographs, scientific journals, conference proceedings, theses and government, corporate and institute reports. There are four indexes - subject, geographic, title and serial.

Toronto, Ontario : The Institute of Environmental Studies, University of Toronto, 1978. pp. 67-73.

333.823 05 Arc 1978

In this paper, the author presents a biologist's view of the effects of oil pollution on the marine environment, including a section which offers speculation on oil spills in the Arctic. Three biological principles are put forth: plant and animal populations have built-in variability; the nearshore marine environment is both the most productive and the most vulnerable; and the normal reaction of a community to stress is the reduction in the number of species present. The author expands on these principles and concludes by offering an assessment of the state of oil pollution in our seas.

628.168 33 Osc 1981

This paper outlines the background and scope of the four-year Baffin Island Oil Spill (BIOS) project which was formally initiated in March 1980. The authors present an overview of the first season's results, highlighting the preliminary oil discharges which took place in August of 1980 and which marked the start of studies on the long-term fate of oil on Arctic beaches. The oceanographic, meteorological and geomorphological studies are touched on, as are the chemical and biological programs which form part of the project. The paper concludes with a discussion on the ramifications of the results of the first season's studies on the design of the oil spill schedule for 1981. The BIOS project's main objectives are to determine if the use of dispersants in the Arctic nearshore will reduce or increase the environmental effects of spilled oil, and to determine the physical and chemical fate of chemically treated oil on the Arctic nearshore.

Baffin Island Oil Spill Project. Working Report Series 83-1.

Ottawa, Ontario : Canada. Environmental Protection Service, 1984. 64 pp.

628.168 33 BIOS 83-1

The sampling for the Baffin Island Oil Spill (BIOS) project chemistry component is described in this report. The analytical method used to determine total hydrocarbon content and the results of those analyses are presented. Samples taken during the 1983 study are listed with the results of corresponding analyses from 1980 to 1982. The statistical validity of the sample protocol is examined. Much of the information is presented in tabular format and a short list of references is provided.

Baffin Island Oil Spill Project. Working Report Series 83-2.

Ottawa, Ontario : Canada. Environmental Protection Service, 1984. 139 pp.

628.168 33 BIOS 83-2

This volume presents the results of the fourth year of a continuing series of analytical chemical studies of oil fate and transport from the Baffin Island Oil Spill (BIOS) project. Two major tasks were involved in this fourth year study: 1) nearshore - examination of the concentrations of residual oil, its transport paths, fates and weathering; and 2) shoreline - chemical measurements of oiled shoreline to determine concentration and composition of residual oil. Many tables and graphs are used to present the study results and a list of references is provided.

333.917 1 Owe

This document defines the major coastal environments of Canada (some
250,000 km. including the Great Lakes) and explains significant
geological characteristics. The expected nature and behavior of oil
spill occurrences and the distribution of oil residues in the littoral
environment are discussed. Available cleanup techniques are
examined in terms of their applicability and effectiveness. Guidelines
for the implementation of the most suitable techniques in each coastal
environment are presented. A bibliography provides references for
more detailed information as well as listing sources cited in the text,
and a glossary of terms is included.

A 263 THE COASTAL MORPHOLOGY AND SEDIMENTOLOGY OF EASTERN
LANCASTER SOUND AND NORTHEAST BAFFIN ISLAND: A STUDY OF
SHORELINE SENSITIVITY TO A POTENTIAL OIL SPILL.

Peter McLaren and William B. Barrie.

Geological Survey of Canada Paper 83-24.

Ottawa, Ontario : Geological Survey of Canada, 1985. 32 pp.

557 GSC P83-24

In preparation for considerable hydrocarbon exploration and production activities in the Lancaster Sound and Baffin Bay regions, the Geological Survey of Canada (GSC) undertook this environmental coastal study. The potential of an oil spill arising from a blowout, tanker accident or other situation is examined briefly. The physical environments of the coasts of the subject regions are defined, coastal vulnerability and sensitivity are assessed and suggested protective measures and cleanup procedures are recommended. The intent of the report and accompanying maps is to provide all pertinent information required to allow oil spill contingency planning to take place.

This paper describes tests on the emulsification properties of two different Beaufort crudes. The test results show that emulsions with up to 50 percent water content have to be expected after an oil spill. In the tests, emulsions with this water content were burned in a simple combustor and the resulting flames were as clean as could be expected from any fuel. Since no problems were encountered while burning the emulsions, the authors suggest that a low pollution incineration device can be designed using previously established standard design criteria.

628.168 33 ASTM

The distribution and environmental fate of petroleum hydrocarbons introduced into the nearshore environment of Baffin Island, N.W.T., in two controlled experimental discharges, are studied in this paper. Two scenarios are presented. 1) Untreated oil on the water surface, and 2) chemically dispersed oil discharged below the surface. Conclusions are drawn about the weathering of oil in both scenarios, transport of hydrocarbons into the water column, the sedimentation of oil and the uptake and depuration of untreated and chemically dispersed oil by selected benthic invertebrates. This study is part of the Baffin Island Oil Spill (BIOS) program.

edited by R.J. Childerhose.
Beaufort Sea Project Overview Report.
Ottawa, Ontario : Beaufort Sea Project. Canada. Department of Fisheries and Oceans, n.d. 119 pp.

628.168 6 Mil

The Beaufort Sea Project is the name given to a group of studies designed to ensure that effective regional environmental assessments are conducted prior to major drilling programs being authorized. This report, which is one of a series, devotes much of its text to the oceanography of the Beaufort Sea and features topics such as sediments, storm surges, and sea ice. Diagrams show the possible spread of oil from a blowout for spring, summer and winter, predicting where the oil is most likely to appear. There are also discussions on the effects of oil and other industrial pollution on marine life, and oil spill countermeasures. A short history of the general exploration of the Canadian Arctic, which began in the sixteenth century, is included.

OIL SPILL SCENARIO 4: TANKER COLLISION IN LANCASTER
SOUND.
LGL Limited Environmental Research Associates.
Beaufort EIS Support Document 1982.
Toronto, Ontario : LGL Limited Environmental Research Associates,
n.d. 50 pp.

628.168 33 LGL

Prepared for Dome Petroleum Limited, this report is one of a series of descriptions of the potential effects of oil spilled under specified circumstances in the Beaufort Sea and Northwest Passage. In this scenario (Dome's "oil spill scenario 4"), an oil carrying tanker is assumed to be involved in a collision in central Lancaster Sound. As a result of the hypothetical collision, 270,000 barrels of oil are spilled over a period of two days. It is further assumed, for the purposes of this scenario, that no cleanup, containment or dispersal of the spilled oil occurs. This report examines the fate of the spilled oil, and its effect on mammals, fish, birds and the aquatic ecosystem in the area.

628.168 33 ASTM

This paper outlines recommendations for ecology-based guidelines which are being developed for oil spill dispersant use in marine and coastal environments. The recommendations consider dispersant use to protect habitats from the impact of oil spills, to mitigate impact and to clean habitats after a spill. There are summaries of five guidelines (for coral reefs, rocky shores, bird habitats, sea grasses and marine mammal habitats) and each one contains a description of the habitat type and the potential impact from oil spills as well as recommendations for dispersant use.

S.D. Rice.

In PETROLEUM EFFECTS IN THE ARCTIC ENVIRONMENT. edited by F.R. Engelhardt.

London, England : Elsevier Applied Science Publishers Ltd., 1985. pp. 157-182.

363.738 2 Pet

Nearly all the important commercial fisheries in the world are located over continental shelves, which are also the sites of offshore oil development and transportation. Thus, there is concern that oil pollution may harm fisheries through direct or indirect destruction of fish stocks. This paper reviews the effects of oil on fish. It is pointed out, however, that there have been few laboratory or field studies of Arctic fish so much of the information presented here has been extrapolated from studies of fish in warmer climates. The author discusses the toxicity of oil to fish, the sublethal effects of oil on fish and the effects of oil on fisheries. A list of references is included.

EPOA Project #8.
Calgary, Alberta : Eastcoast Petroleum Operators' Association
(EPOA), 1972. 2 microfiche.

MF EPOA 8-1

This report presents the recommendations of the Eastcoast Petroleum Operators' Association (EPOA) Marine Oil Pollution Baseline Study Committee. The committee was established to determine the research requirements necessary to enable the petroleum industry to operate offshore in a safe, efficient, manner with minimum disturbance to the environment. The report consists of recommendations and discussions based on information gathered during consultations with industry, government and the academic community, designed to define problem areas and determine how all interested parties can work together to solve pollution problems which are a threat to the environment. Eight appendices containing committee support documents are included.

Oil spill response in major river systems can be hampered both technically and logistically by river width, current speed, and limitations imposed by equipment and weather. Esso, in response to challenges presented by the Mackenzie River on the Northwest Territories, has developed response systems and techniques to deal with such concerns. The techniques, which include mid-channel response, anchoring, oil deflection and oil recovery from under thick ice, are described in this paper.

edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 441-460.

551.468 7 Ala

This paper summarizes relevant knowledge about the interactions between Arctic sea ice and oil. The author identifies the major factors in the interaction, given a large under-ice blowout in the Beaufort Sea during winter. For the purposes of this paper, the blowout is assumed to consist of the continuous release, over a minimum of several days, of large quantities of crude oil and many times that amount of gas. The expected phases and effects of such a blowout are detailed, including thermal effects, spreading phase and the effects of gas, currents and ice motion. Oil-ice interactions that will affect clean-up after the blowout are also discussed. A list of references is provided.

628.168 33 ASTM

This paper describes an ecological impact model designed to estimate the impact of chemically treated and untreated oil spills on seabirds and fish. Impact is defined as the proportion of the animal population killed and the length of time required for that population to recover to its pre-spill condition. The findings suggest that, for some situations, chemically dispersed oil might have a greater area of effect and greater environmental impact than undispersed oil.

628.168 33 Osc

The North Aleutian Shelf is a shallow region of the southeast Bering Sea that supports large populations of commercial fish and marine mammals. The sea otter population in the area has been studied generally since 1930 but more specifically recently in view of proposed oil development. This study provides an environmental baseline on sea otters in order to assess the impacts of proposed oil-related development. Emphasis is placed on the distribution of the otter and the environmental factors regulating the distribution patterns.

628.168 33 BIOS 83-7

This document reports that observations made during the 1981 field season of the Baffin Island Oil Spill (BIOS) project indicate that both the mya truncata (soft-shelled clam) and the serripes groenlandicus (Greenland cockle) accumulate high levels of petroleum hydrocarbons in oil spill situations. The authors discuss behavioral differences between the two species and the extent to which the accumulated hydrocarbons affect their physiological well-being. A number of charts illustrate research findings and a short bibliography is included.

- A 283 OFFSHORE DRILLING FOR OIL IN THE BEAUFORT SEA: A PRELIMINARY ENVIRONMENTAL ASSESSMENT.
A.R. Milne and B.D. Smiley.
Beaufort Sea Project. Technical Report No. 39.
Victoria, British Columbia : Canada. Department of the Environment, 1976. 43 pp.

333.951 Mil

This environmental assessment report assumes a hypothetical worst-case oil well blowout scenario in the Beaufort Sea. The nature of the transport and fate of oil is examined and conclusions are drawn as to the impact of the oil on the environment, including native harvest, seabirds, marine mammals and other marine organisms. The geographical setting of the Beaufort Sea is described, ice features are examined in some detail, and oceanographic considerations are addressed.

pp. 183-215.

363.738 2 Pet

The authors of this article attempt to assess the risk to marine birds posed by Arctic petroleum development. The actual and projected geography and magnitude of Arctic petroleum extraction and transportation, and the biology and seasonal geography of populations of birds at risk are discussed. The toxicity of oil to birds is reviewed and the interrelationship of all these factors is considered in an overall assessment of risk. Maps and tables are used to supplement the text and a list of references is provided.

This report evaluates knowledge of the fate and effects of oil spilled at sea and the implications of using dispersants, with special reference to Canadian marine environments. Individual scientists contributing to this volume give perspectives on the Canadian oil industry, fate and behavior of oil in the sea, microorganisms and degradation of oil, dispersants, and the effects of oil and dispersants on phytoplankton, zooplankton, fish, birds, marine mammals and ecosystems. Recommendations for further research and strategies for minimizing the effects of oil spills are included. Almost 600 references are cited.

574.522 2 Oil

This study of petroleum pollution in the world's oceans recognizes two potentially opposing aspects of the topic: on one hand the pollution arising from activities undertaken to meet energy needs - extraction, transportation and use of petroleum - and on the other hand the strong desire to preserve living marine resources. After discussing the chemical composition of petroleum hydrocarbon sources this book addresses the introduction of oil to the marine environment, including natural sources, offshore oil production, marine transportation and other industrial causes. Chemical and biological methods for assessing the effects of oil spills on the marine environment are reviewed. There is an examination of the actual effects of oil pollution on marine resources and the biological processes of marine life. Each chapter of this book includes a list of references and an index is provided. Selected major oil spill case histories are presented in an appendix.

628.168 33 Osc 1981

The migration of Prudhoe Bay crude oil and diesel fuel through first year sea ice, and the effect of entrained oil on sea ice growth rates are examined in this paper. Physical and chemical changes within the oils are examined during and after the entrainment process and the results of monitoring sea ice growth under oil are examined here. The laboratory test results include oil migration as a function of ice temperature and the effect of various oil layer thicknesses upon the ice growth rates. Photographs and tables are provided and there is a short list of references.

A 288 THE OIL SINKING ABILITY OF MACKENZIE RIVER BORNE SUSPENDED SEDIMENTS IN THE BEAUFORT SEA: A LITERATURE REVIEW.

F.F. Slaney & Company Limited.

Beaufort EIS Reference Works 1982.

Vancouver, British Columbia : F.F. Slaney & Company Limited, 1978. 78 pp.

628.168 33 Sla

This report was prepared for Canmar, with the primary objective of establishing whether there is sufficient evidence to suggest that suspended sediments carried by the Mackenzie River and discharged in the form of a plume in the Beaufort Sea could contribute to the disposal of an oil slick originating from an oil well blowout. There are two annotated bibliographies included; one contains literature describing sediments of the Beaufort Sea and Mackenzie River and the other, literature describing oil-sediment interactions and the fate of sedimented oil. There is a discussion of the establishment of a formula relationship between the volume of suspended sediments and their ability to sink oil as well as recommendations for future laboratory and field studies to supplement the content of the subject report.

pp. 297-304.

628.168 33 Osc 1981

The behavior of crude oil and diesel oil in solid landfast sea ice has been examined previously under a variety of conditions. Controlled oil releases have shown that oil spills in the landfast ice zone tend to remain highly immobilized and achieve relatively thick concentrations. Such spills encounter natural conditions that encourage accumulation of the oil at or near the ice surface, limit the areal extent of the oil and help preserve certain physical and chemical characteristics that facilitate its control. This paper presents a summary of these phenomena and reveals operational considerations for the development of specific Arctic countermeasure techniques. These techniques are presented here, with emphasis on the use of natural materials and conditions for their implementation. The paper is illustrated and a list of references is provided.

Calgary, Alberta : Arctic Institute of North America, University of Calgary, 1980. pp. 372-389.

333.823 05 Arc 1980

Before concentrating on oil spill countermeasures in the Arctic, this speaker reviews and lists the 36 largest oil spills that have occurred in the world - from 1942 up to March 1978 - and notes that Canada's name does not appear on that list. The public and the media's reaction to oil spills is discussed. The need for preparedness, research and development, and cooperation between all agencies, authorities and interested parties is considered vital in ensuring fast and effective reaction to oil spill situations. The oil spill countermeasures required in various regions because of environmental differences are examined. A graph showing the environmental and economic impacts of twelve large oil spills is included.

628.168 33 Ber

The joint authors of this report prepared historical statistics (mean spill size; frequency of spill; spill size probability distribution) which were then modified to make them appropriate for Arctic application. The statistics were used to predict the resulting oil spills for both pipeline and tanker systems. A comprehensive study was made of all available oil spill data, both conventional and Arctic. This report is fairly technical in nature and considerable use is made of charts and tables.

628.168 33 Mark

This report, prepared for Dome Petroleum Limited, presents the results of 15 simulated accidental releases of oil into the Arctic marine environment. The different types of spills simulated include a blowout, a tanker fire and explosion, and a tanker collision and grounding. The results of the simulations are presented in tabular and graphic format and a summary is provided to explain the types and locations of the hypothetical spills, methods used to derive wind and ice input data and special features of individual simulations.

333.823 05 Arc 1984

This paper reviews oil spill research and countermeasures in the Canadian Arctic. With specific reference to the perspective of the general public, and public interest groups, the author discusses what progress has been made, over the past ten years, in understanding the causes and effects of Arctic oil spills and in improving industry's capacity for cleaning-up. However, it is pointed out that attention must also be paid to the socio-economic effects of oil spills and to the need for industry, government and northern peoples to reach some agreement on the general guidelines for compensation.

333.823 05 Arc 1984

After giving a short history of the fishing industry on the north Pacific coast, the author of this paper addresses the environmental threat of oil spills, especially those that involve large tankers and drilling rigs. The impact of such oil spills on the fish indigenous to the coast of British Columbia is discussed together with the attendant potential threat to the fishing industry, and those who depend on it for their livelihood. In conclusion, the author suggests that sensitive fishing and habitat areas may need to be designated "no-go" areas for the oil industry and compensation and contingency plans developed to protect the environment and the economy of the area.

This volume documents a study performed to locate landfill disposal and temporary storage sites, for oiled debris from sand and shingle beaches resulting from offshore oil spills, along the Beaufort Sea coast. The 217 landfill disposal sites and 223 temporary storage sites located are shown on maps and in aerial photographs and a fact sheet on each site is included. The study establishes guidelines for site selection, design, construction and reclamation of sites. Limitations on construction, utilization and reclamation due to seasonal problems with terrain stability, logistics support and cost effectiveness are considered.

This paper describes the contents of a field guide for oil spill behavior developed to ensure timely and adequate containment and removal of spilled oil. The guide describes Arctic ice conditions, the physical properties of Prudhoe Bay crude oil as it weathers, oil spill behavior in cold water, ice conditions and spill retention potential for the Alaskan shoreline. Six spill scenarios show how the oil spill behavior information should be applied to solve actual problems.

Vancouver, British Columbia : ESL Environmental Sciences Limited, 1981. n.p.

628.168 33 Duv

Prepared for Dome Petroleum Ltd., this extensive report analyses, through the examination of case histories and follow up studies, the biological consequences of oil spills. As well, the report summarizes the current state of knowledge regarding the biological effects of oil spills on coastal marine environments. An overview of the location, season, type and size of spills that have occurred around the world over the previous twenty years is presented. The documented or suggested biological effects of past spills as a function of oil type, size of spill, time of year, type of environment affected and clean-up response and latitude are discussed, as well as the long-term impacts of oil spills and subsequent recovery of various community types. A list of references cited is included and oil spill case history summary sheets are appended to the report.

Toronto, Ontario : The Institute of Environmental Studies, University of Toronto, 1977. pp. 27-42.

333.823 05 Arc 1977

This paper outlines the federal government's activities relative to the development of an oil spill countermeasures capability in the Arctic and, in particular, in the southern Beaufort Sea. The author briefly explains the history that has led to present programs and the apparent and/or real problems that should be addressed. As well, oil spill countermeasures are discussed and the roles played by industry, government, the Canadian and U.S. Coast-Guard, and the Arctic Marine Oilspill Program (AMOP) are outlined in some detail. The main focus of this paper is the organizational aspect of oil spill countermeasures but there is some brief discussion of current technology.

628.168 33 SLR

The primary objectives of this study are to identify the deficiencies which exist in available oil spill technology when applied to a large tanker spill in the Arctic, and to identify the problems which would have to be overcome to eliminate these deficiencies. The study begins by examining historical tanker accidents and spills and the effectiveness of the cleanup operations attempted. The environmental and industrial settings and a review of the probable behavior of oil spills in the Arctic are presented. The technology necessary to successfully handle a northern oil spill is identified, through hypothesized spill scenarios. The capability of government organizations to handle the hypothesized tanker spills is assessed on the basis of both equipment availability and present government plans.

628.168 33 Osc 1981

This paper discusses oil spill response in ice-infested or Arctic environments and identifies environmental factors or constraints not applicable in more temperate climates. In particular, the authors emphasize that the potential impact of oil on biological habitats or communities must be carefully evaluated in terms of species distribution and population abundance at the time of a spill. As well, the authors discuss cleanup versus natural recovery, and priorities for protection and/or cleanup of specific sections of coast.

A 313 STRANDED OIL IN COASTAL SEDIMENTS: PERMEATION IN TIDAL FLATS.

J.R. Harper and B. Humphrey.

Environmental Studies Revolving Funds Report No. 031.

Ottawa, Ontario : Environmental Studies Revolving Funds, 1986.

24 pp.

628.168 33 Har

Low energy coastal systems are considered among the most sensitive to oiling of marine ecosystems because of their vulnerability to oil stranding and the difficulty of their cleanup. This paper, published under the auspices of the Environmental Studies Revolving Funds (ESRF), presents the results of three experiments to quantify one component of oil-sediment interaction - the permeation of oil and retention in muddy-sand sediments. Tables and diagrams are included and there is a list of references.

A 314 A STUDY OF ENVIRONMENTAL CONCERNS: OFFSHORE OIL AND GAS DRILLING AND PRODUCTION.

Robert Baker.

Canada. Environmental Protection Service. Policy and Planning Report EPS 2-EC-78-1.

Ottawa, Ontario : Canada. Environmental Protection Service, 1978. 112 pp.

333.823 16 Bak

In this study, material on the environmental concerns associated with offshore drilling and production activities has been synthesized with the Departments of Fisheries and Environment files on specific relevant projects. Most of these are traceable to specific weaknesses in offshore drilling and production procedures and management - hardware weaknesses are seldom identified as being of central importance. Areas of concern include the gradual deposition of pollutants from rigs, underwater pipelines, and the quality of such components as plans to handle oil spills, standards for safety and anti-pollution equipment and environmental impact.

A 315 "The Toxicity of Oil Spill Dispersants to Marine Organisms: A Current Perspective."

P.G. Wells.

In OIL SPILL CHEMICAL DISPERSANTS: A SYMPOSIUM SPONSORED BY ASTM, WEST PALM BEACH, FLORIDA, OCTOBER 12-13, 1982: ASTM SPECIAL TECHNICAL PUBLICATION 840.

Philadelphia, Pennsylvania : American Society for Testing and Materials, 1984. pp. 177-202.

628.168 33 ASTM

A current perspective on the toxicity of oil spill dispersants to a range of marine organisms, with particular emphasis on recently conducted studies, is offered in this paper. Existing information on the toxicity of dispersants is evaluated, laboratory studies with shrimp and other crustaceans are described, and recommendations for future research are given. A comprehensive list of references is included.

VEGETATION, SOILS, LANDFORMS, GEOLOGY, PERMAFROST

- A 318 "Acoustic Velocities of Nearshore Materials in the Alaskan Beaufort and Chukchi Seas."
John L. Morack and James C. Rogers.
In THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 259-274.

551.468 7 Ala

This paper reports on an extensive marine seismic study which was conducted to locate ice-bonded subsea permafrost in the Alaskan Beaufort and Chukchi Seas. The study also yielded information on the acoustic properties of unbonded materials from these areas. The data are mostly of a survey nature but some testing was done in areas adjacent to drill holes where geologic data had been previously obtained. Many charts and graphs are included and a list of references is provided.

- A 319 ALASKA NORTH SLOPE OIL-ROCK CORRELATION STUDY. ANALYSIS OF NORTH SLOPE CRUDE.
edited by Leslie B. Magoon and George E. Claypool.
Tulsa, Oklahoma : American Association of Petroleum Geologists, 1985.
682 pp.

553.282 097 87 Ala

The results of the Alaska North Slope oil-rock correlation study are presented in this volume. Thirty research groups took part in the study, divided into separate sections: oil companies, university laboratories, commercial laboratories and government laboratories. Each group was sent eight oils and 15 rocks, recovered from the National Petroleum Reserve in Alaska and one oil from the Prudhoe Bay field, for geochemical analysis. The variances and results of these analyses provide the reader with the opportunity to see how different groups approach correlation work, and focus attention on unsolved problems of Alaskan North Slope petroleum geology.

- A 320 ASSESSMENT OF MINERAL AND FUEL RESOURCE POTENTIAL OF THE PROPOSED NORTHERN YUKON NATIONAL PARK AND ADJACENT AREAS. (PHASE I).
Canada. Dept. of Energy, Mines and Resources; Geological Survey of Canada; and Canada. Department of Indian Affairs and Northern Development.
Geological Survey of Canada. Open file 760.
Ottawa, Ontario : Geological Survey of Canada, 1981. various pag.

333.811 GSC

The government's northern National Parks policy directs that inventories of potential mineral and fuel resources be made prior to setting aside lands for park purposes. This report presents preliminary (phase I) assessment results for the proposed Northern Yukon National Park. The geology, regional geochemistry and mineral occurrences of northern Yukon are examined and the methodology and results of mineral and fuel resource assessments for metallic minerals, coal, oil and gas are detailed. The volume is accompanied by six maps, and tables and diagrams. The appendices include an illustrated article entitled "Northern Yukon - a natural area of Canadian Significance" which examines the land, vegetation, wildlife and human history of the area.

- A 321 AN ASSESSMENT OF MINERAL AND FUEL RESOURCE POTENTIAL OF YUKON TERRITORY: INTERIM REPORT.
W.D. Sinclair et al.
s.l. : Geological Survey of Canada, 1981. 113 pp.

553.097 191 Sin; Map R-136 Vault

This interim resource assessment study, prepared for use by the federal government in Yukon land claim negotiations, is presented in three main parts. Part I provides background information on Yukon's geological framework and on its mineral industry. Part II discusses the distribution of known Yukon resources. Part III presents assessments of the potential for occurrence of significant deposits in three categories - lode mineral deposits and gold; coal; and oil and gas. The report includes tables and a list of references and is accompanied by a map entitled, "Mineral deposits and assessment domains, Yukon Territory".

- A 322 "Basins and New Frontiers."
Michel T. Halbouty.
In FUTURE PETROLEUM PROVINCES OF THE WORLD. PROCEEDINGS OF THE WALLACE E. PRATT MEMORIAL CONFERENCE, PHOENIX, DECEMBER 1984.
edited by Michel T. Halbouty.
Tulsa, Oklahoma : American Association of Petroleum Geologists, 1986.
pp. 1-10.

553.282 Wal

Although the global transition to alternative energy sources has begun, this author argues that the world's chief reliance for energy resources during the coming decades will be on oil and natural gas supplies. Therefore, exploration activities must discover the oil and gas that lie untapped in both the known petroleum producing areas of the world and the frontier regions. This paper presents an overview of the basins of the world where it is suggested oil and gas will be found. Coloured illustrations are included and there is a short list of references.

More than 30 sedimentary basins surround the Arctic Ocean. This paper presents a series of reconstructions of the ancient structural, depositional and climatic trends of the more important basins to evaluate the relative hydrocarbon potential of this frontier area. Maps depicting the crustal history of the sedimentary basins are included as are maps depicting basin filling, particularly the deposition of organic-rich source rocks, sealing sediments and reservoirs for petroleum accumulations. Petroleum occurrence in the Arctic is summarized. Many colour illustrations are included and a comprehensive list of references is provided.

Geo-analysis Ltd.
Ottawa, Ontario : Geo-analysis Ltd., 1977. 2 vol.

551.300 971 9 Geo

Prepared for the Department of Indian Affairs and Northern Development (DIAND), this comparative study of selected terrain and geotechnical characteristics along the proposed Alcan, Yukon and Mackenzie Valley pipeline routes reveals a number of major differences and a number of similarities between the two routes. The main topics discussed are frost susceptibility, slope stability, erosion, icing, seismicity and comparison of the amount of bedrock present. Volume one contains the text, tables and a list of references. Volume two comprises maps of cross sections along each route showing selected characteristics.

A 326 CONVENTIONAL OIL RESOURCES OF WESTERN CANADA (LIGHT AND MEDIUM GRAVITY).

P.J. Lee et al.

Ottawa, Ontario : Geological Survey of Canada, 1986. 33 pp.

333.823 GSC

This report, which comprises an excerpt from a presentation to the House of Commons Standing Committee on Energy, Mines and Resources, summarizes an analysis of the remaining light and medium gravity conventional oil resources that may exist in the Western Canada Sedimentary Basin. This document offers the first major revision of this group of resources since 1978. The ultimate objective of this summary is to permit an analysis of future supplies of conventional oil from western Canada in terms of the quantities available, their characteristics in terms of size and distribution of pools or fields, the way in which future discoveries may differ from those of the past and implications for economics of supply.

Fairbanks, Alaska : State of Alaska. Division of Geological and Geophysical Surveys, Department of Natural Resources, 1983. pp. 65-86.

551.384 Fre

As a background to a proposed excursion from Dawson to Eagle Plain, this guide examines a sample of the range of permafrost features and associated landforms along that route. A history of the Dempster Highway is included, as well as descriptions of the permafrost and terrain conditions. The construction of the highway is discussed and the consideration given to building materials, the effects of disturbing the terrain (which can disrupt the insulating surface vegetation) and other aspects of construction in northern locations are outlined. Maps and photographs are provided and the list of the proposed stops along the excursion route notes features to be examined.

551.468 7 Ala

The basis for this study is the noticeable increase in seismic velocity that occurs in most materials containing water when they freeze. Applied to the large amounts of seismic data collected for petroleum exploration, this phenomenon makes seismic techniques a reasonable approach for investigating the distribution of ice-bonded subsea permafrost. Velocity profiles and maps are included for the coast from Harrison Bay, Alaska to 40km east of Prudhoe Bay, Alaska. To assist in understanding the seismic results, the authors have produced velocity profiles from laboratory information on velocity versus temperature for various materials, and from temperature profiles onshore and offshore. Graphs and maps are used throughout and a short list of references is included.

Ottawa, Ontario : Canada. Department of Energy, Mines and Resources, 1975. 57 pp.

557.19 Owe

This report describes some of the geologic features observed during construction, by Westcoast Transmission Company Limited, of a natural gas pipeline between Amoco's Pointed Mountain Gas Field and Beaver River, B.C. This was the first Canadian owned pipeline to be constructed in the Northwest Territories and, as such, generated considerable interest, especially when pre-construction investigations determined that some portions of the proposed route were underlain by permafrost. Soils and bedrock encountered along the route are identified and groundwater properties and permafrost are discussed. Pipeline construction methods are described and the text is supplemented by photographs and charts. A list of references is provided.

333.916 41 Fin

Natural geological conditions and processes, termed here environmental geology, are best indicated by the geomorphology of an area. Recognition of landforms, and knowledge of the processes by which they form, enable prediction of future natural and human-induced changes. This study discusses these factors relative to the Alaskan Arctic coastal plain and the study forms part of the final report of the multidisciplinary Outer Continental Shelf Environmental Assessment Program (OCSEAP). The information presented is intended for use in development planning primarily related to hydrocarbon exploration and production. The study is illustrated and a list of references is provided.

- A 340 GEOLOGY AND ECONOMIC MINERALS OF CANADA.
5th edition.
Geological Survey of Canada
edited by R.J.W. Douglas.
Geological Survey of Canada. Economic Geology Series: No. 1.
Ottawa, Ontario : Canada. Department of Energy, Mines and Resources, 1976. 2 vol.

557 E1 1976

These volumes provide a general review of present knowledge of the geology of Canada, including economic aspects of mineral deposits. The many different aspects of geology are treated in considerable detail on a nationwide basis. There is an accompanying portfolio containing a geotectonic correlation chart for each major region and eight maps at 1:5 million scale dealing with the geology, tectonics, mineral deposits, glacial features, physiography and other aspects. In the text, factual data are summarized and economic and scientific interpretation and conclusions are dealt with separately. Both volumes are illustrated throughout, a list of references is included and there is a subject index.

- A 344 "Giant Oil and Gas Fields."
S.W. Carmalt and Bill St. John.
In FUTURE PETROLEUM PROVINCES OF THE WORLD. PROCEEDINGS OF THE WALLACE E. PRATT MEMORIAL CONFERENCE, PHOENIX, DECEMBER 1984.
edited by Michel T. Halbouty.
Tulsa, Oklahoma : American Association of Petroleum Geologists, 1986.
pp. 11-53.

553.282 Wal

A giant oil or gas field is defined as one having 500 million barrels of recoverable oil or equivalent gas. This paper describes the geologic setting and classification, and discovery rates of the 509 (at the time of writing) known giants as well as discussing future oil supplies in light of the decrease in exploration and discovery rates due to economic (rather than geologic) factors. Each of the 509 giant fields is listed in a table providing information such as location, recoverable reserves, classification, depth and geologic age. The fields are listed alphabetically by name, cross referenced to the main table. References are provided.

625.792 NESCL

This report documents tests conducted near Inuvik, N.W.T., to determine the economical, structural and environmental feasibility of building a snow road over various terrain conditions. The effects of the snow road on vegetation and permafrost are discussed as well as the surface elevation, organic layer and active layer measurements taken before and after construction and use of the snow road. Tables and diagrams are used for illustrative purposes.

- A 348 INVESTIGATION OF SUBSURFACE CONDITIONS AT KING POINT, YUKON TERRITORY.
M.J. O'Connor & Associates Ltd. for Indian and Northern Affairs Canada.
s.l. : s.n., 1986. 2 vol.

624.151 7 MJO

The findings of a geotechnical site investigation at King Point are reported in this document. Because deep water occurs relatively close to the coastline and granular resource deposits occur in close proximity, King Point has generated interest as a potential marine terminal and harbour for servicing offshore activities related to hydrocarbon exploration and development in the Beaufort Sea. The purpose of this site investigation is to acquire data to permit engineering assessment of the potential impacts of the proposed developments on both coastal and onshore environments proximate to King Point. Volume I contains the text of the study results and volume II contains appendices. Maps and charts are used throughout and a list of references is provided.

The Mackenzie Delta region comprises the northeastern flank of the Richardson Mountains and Arctic Ranges, the Mackenzie Delta, the coastal plain east of the delta and the northwestern edge of the Anderson Plain. The geomorphology, geology, hydrology, ice conditions and vegetation of the region are examined in this paper. Intended for use as a guide during the excursion portion of the subject conference, a list is provided which notes points of interest in the region. Photographs of Inuvik are included and a description of its location, public works, housing and utilities.

PERMAFROST RESPONSE STUDY NEARSHORE AND ONSHORE
PIPELINE GEOTHERMAL ANALYSIS.
EBA Engineering Consultants Ltd.
s.l. : s.n., 1981. 22 pp.

624.151 36 EBA

This report presents the results of a study of the geothermal interaction between a subsea oil pipeline and surrounding permafrost soil. (The hypothetical pipeline is intended to carry oil from offshore production islands in the Beaufort Sea to a pipeline terminal on Richards Island, N.W.T.) The report provides a preliminary estimate of the extent of thaw that may occur during the operating lifetime (for the purposes of this study assumed at 25 years) of such a buried pipeline.

pp. 5-34.

551.384 Fre

This technical paper describes the geology, geomorphology, climatology, hydrology, and permafrost distribution in the northern Yukon Territory and the Mackenzie Delta, N.W.T. In addition, the authors examine the soils and vegetation in these areas, noting that all soils in northern Canada are characterized by a cold soil climate and, in most cases, by the presence of permafrost. Many photographs, maps and diagrams are included to supplement the text of this paper.

conferences / geology / geomorphology / climatology / hydrology / permafrost / Yukon Territory, Northern / Mackenzie Delta, N.W.T. / vegetation / soils / ground temperature

- A 355 OIL AND NATURAL GAS RESOURCES OF CANADA 1983.
R.M. Proctor, G.C. Taylor and J.A. Wade.
Geological Survey of Canada Paper 83-31.
Ottawa, Ontario : Geological Survey of Canada, 1984. 59 pp.

557 P83-31

The oil and natural gas resources of Canada are evaluated on a systematic basis by the Geological Survey of Canada (GSC). This report summarizes the current estimates of quantities of oil and natural gas that are inferred to exist but not yet discovered. Analysis of resources is made for each of Canada's petroleum regions, addressing both conventional and non-conventional resources. The GSC's estimates of potential resources are supplemented by information provided by the Canadian Oil and Gas Lands Administration (COGLA) and the National Energy Board (NEB). There are illustrations throughout this report and a glossary and list of references are provided.

A 357 "Permafrost Distribution in Northern Canada: Interpretation of Well Logs."

A. Judge and A. Taylor.

In WORKSHOP ON PERMAFROST GEOPHYSICS, GOLDEN, COLORADO, 23-24 OCTOBER 1984.

edited by J. Brown, M.C. Metz and P. Hoekstra.

Hanover, New Hampshire : U.S. Army Cold Regions Research and Engineering Laboratory, 1985. pp. 19-25.

551.384 Wor

This technical paper examines the interpretation of well log data to determine permafrost characteristics and distribution. It is reported that the base of permafrost has been determined using the conventional well logs from 220 wells drilled for hydrocarbon exploration in the Mackenzie Valley and the Yukon, 160 wells in the Mackenzie Delta-Beaufort Sea region and 150 in the Arctic islands. With the aid of maps, the permafrost conditions in these areas are described. A list of references is provided.

The Prudhoe Bay oil and gas field is located on the North Slope of Alaska, adjacent to the Beaufort Sea coastline. This paper presents a summary of the geology of the area and its hydrocarbon potential and then discusses the history of exploration which led to the discovery of the hydrocarbon reserves. The author argues that the sequence of exploration, development and production in the area has been characterized by environmental, social, legal, political and economic complexity and controversy. Maps and diagrams are included and there is a list of references.

- A 360 RECONNAISSANCE OF VEGETATION AND SOILS ALONG THE DEMPSTER HIGHWAY, YUKON TERRITORY: II. SOIL PROPERTIES AS RELATED TO REVEGETATION.
W. Stanek.
Victoria, British Columbia : Canada. Department of the Environment. Canadian Forestry Service, 1982. 28 pp.

631.471 9 Sta

In July 1979, Foothills Pipelines (Yukon) Ltd. (FPL(Y)) filed plans with the National Energy Board (NEB) to construct and operate a gas pipeline from the Mackenzie Delta, N.W.T., to a point near Whitehorse, Yukon Territory. This report contains information on the nutrient and element content of 100 soil samples collected along the Dempster Highway, Yukon. Information on the depth to permafrost and generic soil types is also provided. The report is concerned with revegetation aspects of soils occurring along the proposed pipeline route. Maps, photographs and tables are included and there is a short list of references and a glossary.

A 361 RECOVERY OF ARCTIC AND SUB-ARCTIC VEGETATION NINE SUMMERS AFTER CRUDE AND DIESEL OIL SPILLS.

T.C. Hutchinson.

Canada. Department of Indian Affairs and Northern Development. Northern Affairs Program. Environmental Studies No. 22.

Ottawa, Ontario : Canada. Ministry of Indian Affairs and Northern Development, 1984. 39 pp.

333.781 Hut

Experimental oil spills were set up from 1972-1975 in the spruce taiga at Norman Wells and on the tundra at Tuktoyaktuk, Northwest Territories. This report discusses the monitoring program and results some six to nine summers later, in 1980. It is noted that both experimental oil spill sites still show very marked effects of the spills. A major factor in this is the generally very poor recovery of the lichens and mosses which constitute a high percentage of the flora of the regions studied. This document describes the methods used in the experiments and discusses the results relative to each site. The text is supplemented by tables and photographs and a glossary of terms is included.

Norman Wells, N.W.T. / tundra / taiga / Tuktoyaktuk, N.W.T. / oil spills / pollution, oil / vegetation / trees / arctic conditions / environmental impact

A 362 REMOTE SENSING DATA SUMMARY: MACKENZIE DELTA-BEAUFORT SEA-HERSCHEL ISLAND-SACHS HARBOUR.

W.J. Aird and S.P. Pierce.

Canada. Environmental Protection Service. Environmental Assessment & Design Division EPS 3-EC-76-3.

Ottawa, Ontario : Canada. Environmental Protection Service, 1976. n.p.

912.719 Air

This report covers the remote sensing data, up to 1985, available at the National Air Photo Library (NAPL) covering the Mackenzie Delta - Beaufort Sea - Herschel Island - Sachs Harbour. Guidance is provided on how the original data may be retrieved and an example of the data retrieval procedure is given. The remote sensing data is presented in tabular form with index maps showing the area covered by each quadrant used in the tables.

A 363 REVEGETATION AND IMPACT ASSESSMENT STUDIES IN THE
MACKENZIE RIVER REGION.

Hardy Associates (1978) Limited.

Beaufort EIS Reference Works 1982.

s.l. : Hardy Associates (1978) Limited, 1980. 79 pp.

333.731 Har

Hydrocarbon exploration and development in the Mackenzie River Valley and Delta regions has led to concern that the environment be adequately protected and that areas disturbed be properly reclaimed. This report, commissioned by Esso Resources Canada Limited, presents the findings of a number of revegetation and impact assessment studies conducted in the Mackenzie River Valley and Delta regions in the early 1970s. The report is divided into two major sections. The first deals with the results of revegetation studies in the subject regions. The second section presents the findings of studies on the impact of snow road construction and use, and on the effects of winter methanol spills on vegetation, active layer thickness and surface elevation. This report is illustrated and includes a list of references cited.

A 364 REVIEW OF ADDENDA TO ENVIRONMENTAL IMPACT STATEMENT FOR
THE YUKON SECTION OF THE ALASKA HIGHWAY GAS PIPELINE.

Peter J. Williams & Associates Ltd.

Ottawa, Ontario : Peter J. Williams & Associates Ltd., 1982. 31 pp.

PAM 1982-54

This report presents a view of geotechnical aspects of the Alaska Highway Gas Pipeline (AHGP) proposals. The report concerns submissions to the Federal Environmental Assessment Review Office (FEARO) which constitute an addendum to the Environmental Impact Statement (EIS) submitted in 1979 by Foothills Pipe Lines (South Yukon) Ltd. (FPL(SY)). The geotechnical aspects of the submissions are numerous and diverse and in this review the authors concentrate only on fundamental questions related to design values for pipeline displacement and stress due to frost heave, control of frost heave, thaw settlement and related research and development activities. A list of references is provided.

- A 366 "Sediment Characteristics of the Lagoons of the Alaskan Beaufort Sea Coast, and Evolution of Simpson Lagoon."
A. Sathy Naidu et al.
In THE ALASKAN BEAUFORT SEA. ECOSYSTEMS AND ENVIRONMENTS.
edited by Peter W. Barnes, Donald M. Schell and Erk Reimnitz.
Toronto, Ontario : Academic Press, 1984. pp. 275-292.

551.468 7 ALA

This paper describes the sediments and depositional settings of the lagoons along the microtidal coast of the Alaskan Beaufort Sea, and reports the erosional rates of the adjacent mainland coast. As well, the authors present stratigraphic evidence showing that some North Slope lagoons are evolved from coalescence of coastal lakes. It is noted that during the past two decades there has been a surge in the study of sediments and sedimentary processes of barrier islands and lagoons, bays, or sounds. Much of this study activity has been generated from the recognition by geologists that ancient lithified representatives of barrier island deposits constitute an important repository for hydrocarbons.

A 369 STRESS HISTORY IN THE BEAUFORT SEA: AN INITIAL STUDY.

Elisabeth Hivon.

s.l. : s.n., 1983. various pag.

551.809 163 27 Hiv

This report reviews available consolidation data for surficial sediments (top 200 metres) for the Kringalik Plateau and Tingmiark Plain areas of the Beaufort Sea. (Consolidation refers to the reduction in void ratio when sediment is subjected to an increase in pressure.) The data are re-analysed to determine the state of consolidation. It is reported that the top few metres are apparently over-consolidated while below ten to 15 metres the soils tend to be normally consolidated. Much of the information presented is in tabular format and a list of references is provided.

sediments / Beaufort Sea / Kringalik Plateau / Tingmiark / geology / soil temperature

- A 370 "Subsea Permafrost: Field Mapping and Numerical/Physical Modeling of its Spatial Distribution in the Beaufort Sea."
S.M. Blasco and D.L. Lewton.
In WORKSHOP ON PERMAFROST GEOPHYSICS, GOLDEN, COLORADO, 23-24 OCTOBER 1984.
edited by J. Brown, M.C. Metz and P. Hoekstra.
Hanover, New Hampshire : U.S. Army Cold Regions Research and Engineering Laboratory, 1985. pp. 6.

551.384 Wor

This brief article, which discusses the identification of four types of subsea permafrost in the upper 100m of sediment in the Beaufort Sea Continental Shelf, is an abstract of a paper presented at the subject workshop. The authors describe the geotechnical data and seismic profiles used in identifying the permafrost and describe a new scale modeling facility and its projected use in further research activities related to subsea permafrost.

G. Norris.
Geological Survey of Canada.
[Ottawa, Ontario] : Geological Survey of Canada, 1986. 89 pp.

557 B340

This report provides detailed information on the distribution and taxonomy of palynomorphs (spores, pollen, algae, fungi, lichens) from a well in the southern Beaufort Sea, an area of continuing commercial interest for hydrocarbon exploration. The author describes, illustrates and documents the occurrences of the palynomorph species and assesses their stratigraphic and paleoecologic significance. The information presented in this document is intended for use in the regional evaluation of tertiary strata in Arctic Canada for hydrocarbon fuel potential, and in the correlation of sedimentary basins.

A 378 VEGETATION OF KING POINT, PAULINE COVE AND BAILLIE ISLANDS.

Hardy Associates (1978) Limited.

Beaufort EIS Reference Works 1982.

Calgary, Alberta : Hardy Associates (1978) Ltd., 1979. 18 pp.

333.917 Har

Over the long term, harbours and shorebase requirements of Dome (for whom this report was prepared) and Canmar may grow as a result of increased drilling activities and the development of oil and gas reserves in the Beaufort Sea. This report provides a brief description of the vegetation at King Point, Harbour Lagoon, Pauline Cove, Baillie Islands and Cape Bathurst, which are potential sites for harbour development, with a view to ensuring that disturbance to the vegetation can be minimized through careful site selection. The vegetation descriptions provide data upon which preliminary assessment of the potential impacts of shore facilities can be made.

In WORKSHOP ON PERMAFROST GEOPHYSICS, GOLDEN, COLORADO, 23-24 OCTOBER 1984.

edited by J. Brown, M.C. Metz and P. Hoekstra.

Hanover, New Hampshire : U.S. Army Cold Regions Research and Engineering Laboratory, 1985. pp. 48-50.

551.384 Wor

Over the past decade the Geological Survey of Canada (GSC) has acquired thousands of oil company records relative to the Beaufort Sea. Many of these records indicate the presence of high-ice-content frozen sediments beneath the sea floor. This technical paper explains how the GSC is analyzing the records for present and future use in the study of offshore permafrost.

- A 380 WHITEHORSE FIELD PARTY, SEPTEMBER 1985.
R.G. Gilmore et al.
Calgary, Alberta : Petro-Canada, 1985. 2 vol.

553.28 Gil

Volume I of this set presents the report of a field party, from Petro-Canada, which conducted an investigation into the hydrocarbon potential of the Whitehorse Trough. The geology of the Whitehorse area is described and the results of tests on 96 rock samples, which were subjected to geochemical analyses, are discussed here. A bibliography is included and the volume is illustrated in colour. Volume II consists of ten maps which accompany the text of Volume I.

SOCIO-ECONOMIC ASPECTS

- B 1 "Air Cushion Vehicle - A Positive Alternative."
R.P. Rawlyk.
In THE CHALLENGE OF THE EIGHTIES. PROCEEDINGS [OF THE]
NORTHERN TRANSPORTATION CONFERENCE, WHITEHORSE, YUKON,
OCTOBER 5-7, 1982.
Edmonton, Alberta : Co-op Press Ltd., 1982. pp. 26-31.

380.5 Nor

This author, who represents the Kitikmeot Inuit Association, outlines the problems being experienced with the transportation system in the north, in terms of serving the social needs of the communities. The hidden costs involved in using the more traditional methods, such as cargo plane and barge, are discussed and the increased use of the air cushion vehicle, to more adequately respond to the economic and social needs of the northern communities, is recommended.

B 4 ALASKA HIGHWAY PIPELINE-FEDERAL/TERRITORIAL TASK FORCE ON SOCIO-ECONOMIC TERMS AND CONDITIONS: DRAFT II DISCUSSION PAPER.

Federal/Territorial Task Force on Socio-economic Terms and Conditions - Alaska Highway Pipeline.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1978. various pag.

330.971 91 CAN

This document sets out the terms and conditions to be met by Foothills Pipelines (Yukon) Ltd. (FPL(Y)) in presenting an information program for local communities on what a pipeline development entails. Opportunities associated with the development and problems related to the impact of a large scale project on local communities are emphasized. This material has been developed drawing on recommendations from the Berger and Lysyk reports on technology assessment, the National Energy Board (NEB), and the Alaska Highway Pipeline Panel.

B 5 "Alaska Native Hire on the Trans-Alaska Oil Pipeline Project."

Larry L. Naylor and Lawrence A. Gooding.
In ALASKA REVIEW OF SOCIAL AND ECONOMIC CONDITIONS, v. 15, no. 1, FEBRUARY 1978.
s.l. : University of Alaska. Institute of Social and Economic Research, 1978. 19 pp.

331.124 655 Nay

One of the most controversial local issues arising from construction of the trans-Alaska pipeline (1974-77) was the question of hiring native Alaskans. The Alaska Federation of Natives and the Alyeska Pipeline Service Company worked out a plan to ensure native employment. This article takes a look back at the extent to which Alaska natives were involved in the pipeline project. Five broad areas are examined - 1) the number of natives employed; 2) native population groups employed; 3) types and levels of jobs held; 4) training given to employees; and 5) time on the job and approximate amount of money earned.

Alyeska Pipeline Service Co. / Alaska / native peoples / pipeline construction / employment / TAPS / socio-economic impacts

B 6 ANALYSIS OF RANKINGS OF SOCIO-ECONOMIC IMPACTS OF THE NORMAN WELLS PIPELINE PROJECT.

M.B. Green and R.M. Bone.

[DIAND Norman Wells Monitoring Report No. 3-84.]

Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1984. 45 pp.

330.971 93 DIAND 3-84

The development of the Norman Wells oilfield by Esso Resources Limited, together with the construction of a pipeline by Interprovincial Pipelines, represented a major project in the Mackenzie Valley region. The Department of Indian Affairs and Northern Development (DIAND) was concerned that socio-economic impacts might occur in four communities located near the pipeline route (Norman Wells, Fort Norman, Wrigley and Fort Simpson) and initiated a monitoring program for these communities. Part of this program involved a single-question survey on the perceived positive and negative aspects of the project and the survey responses of 41 residents are the subject of this report.

B 7 AN ANALYSIS OF THE ECONOMIC FUNCTIONS IN THE FOUR STUDY COMMUNITIES IN 1982.

P.T. Bates.

[DIAND Norman Wells Monitoring Report No. 7-84.]

Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1984. 25 pp.

330.971 93 DIAND 7-84

Part of the Department of Indian Affairs and Northern Development's (DIAND) monitoring program on the socio-economic impacts of the Norman Wells oilfield expansion and pipeline project, this study investigates the economic functions of four communities along the pipeline route (Norman Wells, Fort Norman, Wrigley and Fort Simpson). "Economic functions" refers to the goods and services available from local sources in each community. As well, the historical development of the local economies is examined in terms of flow of goods and services and shopping expenditure patterns.

DIAND / socio-economic impacts / Norman Wells, N.W.T. / Norman Wells Pipeline / Fort Norman, N.W.T. / Wrigley, N.W.T. / Fort Simpson, N.W.T. / communities

B 8 ASSESSMENT OF SELECTED STATISTICAL DATA FROM THE GOVERNMENT OF THE NORTHWEST TERRITORIES.

Debra Brown.

[DIAND Norman Wells Monitoring Report No. 6-84.]

Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1984. 102 pp.

330.971 93 DIAND 6-84

This report is part of the Department of Indian Affairs and Northern Development's (DIAND) monitoring program designed to identify the impacts, positive and negative, of the Norman Wells oil field expansion and pipeline project on community situations "before", "during" and "after" project construction. The objective of this study is to assess the value of administrative records for research purposes associated with the socio-economic monitoring of the Norman Wells project. The chief value of administrative records is their capacity to present a longitudinal view of change and while this report focuses on the limitations of administrative data, it is noted that these records often provide the only information available on sensitive community issues.

DIAND / socio-economic impacts / Norman Wells, N.W.T. / Norman Wells Pipeline / government / native peoples / child care / health care / social services / alcohol / social problems

B 9 ATTITUDES TOWARDS THE NORMAN WELLS PROJECT.

Sheena Bates.

[DIAND Norman Wells Monitoring Report No. 2-84.]

Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1984. 19 pp.

330.971 93 DIAND 2-84

As part of the Department of Indian Affairs and Northern Development (DIAND) monitoring program on the socio-economic impacts of the Norman Wells oilfield expansion and pipeline project, business and household surveys were conducted among residents of four communities located near the pipeline route (Norman Wells, Fort Norman, Wrigley and Fort Simpson). This monitoring program analyzes the results of a survey to determine the major economic and social impacts of the Norman Wells project.

B 10 BEAUFORT REGION CUMULATIVE MONITORING INDICATOR CATALOGUE.

Northwest Territories. Government. Energy, Mines and Resources Secretariat.

Yellowknife, N.W.T. : Northwest Territories. Government. Energy, Mines and Resources, 1986. 156 pp.

330.971 9 NWT

This document combines the results of two previous studies on the potential socio-economic impacts of hydrocarbon development in the Beaufort Region. The purpose of these studies was to identify data already being collected by various government departments which could be used as quantitative indicators for various socio-economic issues. This volume summarizes the results of the studies, identifying 122 indicators which are listed and examined. The main issues of note include demography, wage employment, prices and incomes, education, community control, family life, health, alcohol, public safety and housing.

Beaufort Sea / GNWT / northern energy development / socio-economic impacts / demography / employment / education / communities / social conditions / health care / alcohol / housing / safety measures / native peoples / native harvest / income and wages

B 11 BEAUFORT SEA CUMULATIVE MONITORING: POSSIBLE INDICATORS FOR SOCIOECONOMIC ISSUES.

Carol Anne Rolf.

s.l. : s.n., 1985. 105 pp.

330.971 9 Rol

This report was prepared for the Government of the Northwest Territories (GNWT) and was sponsored by the Northern Oil and Gas Action Program (NOGAP). Some expected socio-economic impacts of hydrocarbon development in the Beaufort Sea region are grouped into issues which reflect community concern. This report then identifies which impacts might serve as quantitative indicators - including demography, wage employment, education and renewable resource harvesting.

GNWT / NOGAP / socio-economic impacts / demography / employment / education / income and wages / native harvest / Beaufort Sea / Aklavik, N.W.T. / Arctic Red River, N.W.T. / Fort McPherson, N.W.T. / Inuvik, N.W.T. / Tuktoyaktuk, N.W.T. / Paulatuk, N.W.T. / Sachs Harbour, N.W.T.

B 12 BEAUFORT SEA-MACKENZIE DELTA ENVIRONMENTAL IMPACT STATEMENT: RESPONSE TO DEFICIENCIES, SOCIO-ECONOMIC ISSUES.

Dome Petroleum Ltd., Esso Resources Canada Ltd. and Gulf Canada Resources Inc.

Calgary, Alberta : Dome Petroleum Ltd., Esso Resources Canada Ltd. and Gulf Canada Resources Inc., 1983. various pag.

333.823 116 327 Dom

The Beaufort Sea Environment Assessment Panel (BSEAP), after reviewing the Environmental Impact Statement (EIS) for hydrocarbon development in the Beaufort Sea-Mackenzie Delta region, identified major deficiencies in the EIS in five categories - 1) assessment of socio-economic effects; 2) assessment of environmental effects; 3) oil spills ; 4) zone summaries; 5) further information requirements. This document responds to item 1) only and addresses, specifically, impact assessment methods and analyzes mitigation, monitoring, compensation and special concerns such as threats to native traditional lifestyles and culture.

B 13 CANADA/YUKON ECONOMIC DEVELOPMENT AGREEMENT: ASSESSMENT OF IMPORT SUBSTITUTION OPPORTUNITIES.

DPA Group Inc.

s.l. : Yukon. Department of Economic Development, Mines and Small Business, 1986. various pag.

338.097 191 DPA

In June 1984, the governments of Canada and Yukon signed the Canada/Yukon Economic Development Agreement, which outlined cooperative measures and joint objectives for achieving economic growth in Yukon. This study identifies opportunities aimed at overcoming one of the factors which constrain economic development - the minimal production of goods in Yukon (almost all capital and consumable goods are imported). The study stems from a public consultation workshop held in Whitehorse in the early part of 1985 which recommended that a study of import substitution opportunities be carried out.

government / Yukon Territory / YTG / Whitehorse, Yukon / socio-economic aspects / economic development agreement

- B 14 CARING FOR CHILDREN: CHILD CARE NEEDS ASSOCIATED WITH HYDROCARBON DEVELOPMENT IN THE BEAUFORT REGION. A REPORT PREPARED FOR THE DEPARTMENT OF SOCIAL SERVICES, GOVERNMENT OF THE NORTHWEST TERRITORIES.
Diane Erickson and Suzanne Veit.
Victoria, British Columbia : Erickson Associates, 1985. 88 pp.

362.712 Eri

The Government of the Northwest Territories commissioned this study of child care needs as part of a broad research and planning program to prepare for increased hydrocarbon development in the Beaufort region. The study examines three communities - Aklavik, Inuvik and Tuktoyaktuk. An assessment of child care arrangements and resources used by people working in jobs associated with the oil industry is presented as well as potential solutions to child care problems. The authors include recommendations for a day care strategy and for a needs assessment study for further planning in the area of child care in the Northwest Territories.

- B 15 CHANGES IN THE SIZE OF THE NATIVE LABOUR FORCE FROM 1982 TO 1983.
Sheena Bates.
[DIAND Norman Wells Monitoring Report No. 4-84.]
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1984. 43 pp.

330.971 93 DIAND 4-84

The Norman Wells expansion project consists of the growth of oil development and attendant pipeline construction. The socio-economic impact of this development on four communities along the pipeline route - Norman Wells, Fort Norman, Fort Simpson and Wrigley - is the topic of a monitoring program initiated by the Department of Indian Affairs and Northern Development (DIAND). The subject report is part of this DIAND monitoring program and it studies the influence of Norman Wells project activities on the labour force of each of these communities. Labour force characteristics are presented in four categories - total active labour force, full- and part-time workers; government and private industry and by industrial division - and the data are analyzed and conclusions presented.

B 16 CHEMICAL RESIDUES IN FISH AND WILDLIFE SPECIES HARVESTED IN NORTHERN CANADA.

Michael P. Wong.

s.l. : Canada. Department of Indian Affairs and Northern Development, 1985. various pag.

363.738 4 Won

This unpublished manuscript was prepared for the Environmental Studies Program, Northern Environment Directorate, Department of Indian Affairs and Northern Development (DIAND). The study presents information on native peoples' diets, with a focus on the species consumed, portions consumed and method of preparation, for the purpose of evaluating the magnitude of chemical exposure. Human health studies conducted in Greenland are examined and there are reports on contaminant levels in Canadian game birds, Arctic terrestrial and marine mammals, and fish. As well, the results of medical testing of northern native populations are summarized and lists of references and contact people are provided.

B 17 CONNECTIONS: AN ENERGY STRATEGY FOR THE FUTURE.

Canada. Economic Council of Canada.

s.l. : Canada. Economic Council of Canada, 1985. 207 pp.

333.713 Eco

The Economic Council of Canada has a broad mandate to analyze and advise on national and regional economic issues. This report arose from the Council's belief that there is a need to examine, in greater detail, the economic, political and strategic issues that surround the making of energy policy. The study is national in scope and deals with the above aspects of different forms of energy, such as electricity and other alternative sources, in addition to oil and gas.

- B 18 THE DENE THA' BAND: A CASE STUDY IN THE LOCAL DEVELOPMENT IMPLICATIONS OF THE NORMAN WELLS PIPELINE.
RMC Resources Management Consultants (Alberta) Ltd.
Edmonton, Alberta : RMC Resources Management Consultants (Alberta) Ltd., 1984. 22 pp.

330.971 92 RMC

Presented to Interprovincial Pipeline (NW) Ltd., this report documents the development of Dene Tha' Construction Ltd., a general contracting firm privately owned by the Dene Tha' Band. The people of the Band were determined to be involved in pipeline development in northwestern Alberta and this determination led to the establishment of the construction company. The report evaluates the development process involving Dene Tha' Construction Ltd. and Interprovincial Pipelines (NW) Ltd. in connection with the construction of the Norman Wells pipeline. As well, the broader implications in terms of overall socio-economic development for the Dene Tha' population are examined.

- B 19 AN ECONOMIC ANALYSIS OF HYDROCARBON DEVELOPMENTS IN THE BEAUFORT SEA.
Peter Eglinton and Maris Uffelman.
Economic Council of Canada Discussion Paper No: 258.
Ottawa, Ontario : Economic Council of Canada, 1984. 94 pp.

333.823 1 Egl

This paper provides an economic evaluation of some possible development scenarios for hydrocarbon production in the Beaufort Sea. The study was carried out with the assistance of two Beaufort operating companies, Gulf Canada Resources Inc. and Dome Petroleum Ltd. Three topics are addressed in this paper: 1) the approximate minimum oil reserve size, or minimum economic scale, that would allow development of a discovery to be economically viable; 2) the potential for relatively low cost oil from the Beaufort Sea; and 3) the feasibility, estimated through cash flow analysis of a number of previous example oil developments, of future developments based on the present fiscal regime.

- B 20 "Effects of Petroleum Activities on the Ecology of Arctic Man."
M.M.R. Freeman.
In PETROLEUM EFFECTS IN THE ARCTIC ENVIRONMENT.
edited by F.R. Engelhardt.
London, England : Elsevier Applied Science Publishers Ltd., 1985.
pp. 245-273.

363.738 2 Pet

This author discusses the dependence of northern indigenous peoples on the living resources of the regions they occupy. The author outlines the nature and significance of this dependence and explains why, despite an increasing pace of modernization throughout all regions of the north, these northern populations continue to stress the importance of renewable resource harvesting to their present and future circumstances. The effects of petroleum activities are discussed, not only from the aspect of pollution but with respect to the impact of disturbance on the environment and on the daily lives of these northern residents. A list of references is provided.

- B 21 THE EFFECTS OF ROTATIONAL WAGE EMPLOYMENT ON WORKERS AND THEIR FAMILIES IN THE BEAUFORT SEA-MACKENZIE DELTA AREA: AN ANNOTATED BIBLIOGRAPHY, INDICATORS, EMPLOYMENT DATA AND RECOMMENDATIONS FOR FUTURE RESEARCH.
Government of the Northwest Territories: Department of Social Services.
Yellowknife, N.W.T. : Government of the Northwest Territories, 1986.
66 pp.

333.823 1 NWTe

Rotational wage employment is defined as employment in which the work place is so distant from the workers' homes that food and lodging accommodations are provided at the work site, and employees spend a fixed number of days working at the site then a fixed number of rest days at home. This study, funded by the Northern Oil and Gas Action Program (NOGAP) provides a list of current research on the topic of rotation and its effect on workers and their families. The need for further research relevant to the Beaufort Sea-Mackenzie Delta area is identified. A major portion of this volume consists of an annotated bibliography of literature relevant to the rotation study.

- B 22 "Esso's Norman Wells Project."
J.W. Deyell.
In PROCEEDINGS OF THE FOURTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, "MAKING THE FRONTIERS CONVENTIONAL", FAIRMONT, B.C., MAY 12-15, 1985.
Calgary Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1985. pp. B30-B37.

333.823 05 Arc 1985

This paper provides a brief overview of the regulatory process and environmental, engineering, construction and drilling aspects of Esso's Norman Wells Project. The main focus of the paper, however, is the socio-economic aspects of the project and, specifically, Esso's relationship with the regulatory bodies throughout the execution phase of the project. The work at Norman Wells involves two projects - an oil field development project by Esso and a pipeline project by Interprovincial Pipelines. Part of the oil reservoir, located directly under the Mackenzie River, has previously been inaccessible from the land and this project sees the development of that portion of the reservoir by installing a field-wide pattern water flood.

- B 24 AN EVALUATION OF NATIVE HARVEST SURVEY METHODOLOGIES IN NORTHERN CANADA.
Peter J. Usher et al.
Environmental Studies Revolving Funds Report No. 004.
Ottawa, Ontario : P.J. Usher Consulting Services, 1985. 249 pp.

639.108 997 Ush

Sponsored by the Environmental Studies Revolving Funds (ESRF), this study evaluates the methodologies employed in counting and estimating native harvests. Native harvest statistics are counts, or estimates, of the numbers of each species of fish and wildlife taken over a specified time, in a specified area, by a particular group of native people. The primary geographic focus of the study is the Northwest Territories. The usefulness of existing statistical data, for oil and gas related purposes, is assessed and recommendations for improvements in terms of future data collection, management, analysis, and standardization of methodology are made. A list of references is provided.

B 25 FAMILY LIFE ADAPTATIONS TO OFFSHORE OIL AND GAS
DEVELOPMENT.

Keith Storey et al.

Environmental Studies Revolving Funds Report No. 040.

Ottawa, Ontario : Community Resource Services (1984) Ltd., 1986.
207 pp.

362.82 Sto

This study, funded through the Environmental Studies Revolving Funds (ESRF), documents the responses of families living in Newfoundland to a survey about the rotational patterns of work associated with offshore oil and gas employment. Based on the reactions of families, and the adjustments they make due to this way of life, recommendations are offered in an attempt to alleviate a number of problems identified in areas such as partings and reunions, mood changes and other selected behavioral patterns. An annotated bibliography entitled the "Intermittent Spouse" is included and the questionnaires used in the survey are reproduced.

B 26 HUMAN RESOURCES DEVELOPMENT. FINAL REPORT. SUMMARY
VOLUME (VOLUME 1).

Joint Needs Assessment Committee.

Yellowknife, N.W.T. : Joint Needs Assessment Committee, 1983.

121 pp.

331.120 42 JNAC

The Joint Needs Assessment Committee, which was established in 1982 following the 1981 approval of the Norman Wells oil field development and pipeline project, is comprised of members from the Government of the Northwest Territories (GNWT) and representatives from the Dene Nation and Metis populations. The committee's role is to ensure that northern residents, through education and training, are able to participate in and benefit from the Norman Wells project. This final report presents the results of several studies conducted to examine and assess the training programs and economic development potential of Esso's expansion project at Norman Wells. As well, the report makes recommendations concerning future training programs, social programs, adult education facilities, the government's role in employment and training, and the continuance of the Joint Needs Assessment Committee in order to monitor and assess the implementation of these recommendations.

- B 28 IMPACT OF PROJECT ON ECONOMIC BASE OF NORMAN WELLS, FORT NORMAN, WRIGLEY AND FORT SIMPSON. P.T. Bates. [DIAND Norman Wells Monitoring Report No. 8-84.] Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1984. 33 pp.

330.971 93 DIAND 8-84

This report focuses on the impact of the Norman Wells Pipeline project on the economic base of four communities located along the pipeline route. Part of a comprehensive Department of Indian Affairs and Northern Development (DIAND) Monitoring program, this research takes the form of case studies on Norman Wells, Fort Norman, Wrigley and Fort Simpson. An inventory of all the businesses (public and private) in each of the four study communities is provided as well as information on services and shopping expenditure patterns. Industrial sector employment for the years 1981, 1982 and 1983 are compared, with a view to determining whether 1982 (before the project started) was representative of pre-boom conditions.

B 29 "Industry/Community/Government Relations in Energy Resource Areas."

Preston Manning.

In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.

Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1984. pp. 38-43.

333.823 05 Arc 1984

The personal experiences of the author of this paper are drawn from Alberta. Three aspects of energy industry/community relations in Northern Alberta are discussed: corporate efforts to relate more positively to native communities; corporate efforts to improve understanding of the problems and skills involved in cross-cultural communications; and the impact of politics and government on industry/community relations. With the use of a diagram and various tables, the speaker addresses these topics and suggests steps that may be taken to alleviate some unsatisfactory situations which have arisen.

- B 31 "A Land Settlement - What Does it Mean?"
James Wah-Shee.
In GAS FROM THE MACKENZIE DELTA: NOW OR LATER? MAY 23-24,
1974 CONFERENCE [PAPERS].
Canadian Arctic Resources Committee (CARC).
Ottawa, Ontario : Canadian Arctic Resources Committee, 1974.
pp. 83-92.

330.971 Gas

The author of this paper is the President of the Northwest Territories Indian Brotherhood. Considerable public attention has been directed towards the question of land settlement, largely because of developments proposed for the north - the homelands of many of the native peoples of Canada. It is emphasized in this presentation that the native peoples of the Northwest Territories (NWT) are committed and determined to have a fair land settlement which will provide self-protection and survival as a cultural entity, in face of changes likely to occur in the NWT. A look at the historical background of land settlement is provided and the author examines the current situation, the desires of the native peoples, and possible solutions to the issue.

B 32 MANPOWER PLAN - THE ALASKA HIGHWAY [GAS] PIPELINE PROJECT DRAFT: SECTION 1: CONSTRUCTION AND PRE-BUILD PORTION.

[Foothills Pipe Lines Ltd.]
s.l. : s.n., [1979]. various pag.

331.124 655 FPL Sect. 1

The Foothills Pipe Lines Ltd. (FPL) workforce requirements and draft implementation plan for the construction and pre-build portion of the Alaska Highway Gas Pipeline (AHGP) are detailed in this volume. The plan is divided into the following sections: 1) recruiting procedures and local hire; 2) affirmative action; 3) employment and training information; 4) training; 5) mobility; 6) reporting systems; and 7) workforce supply and requirements.

FPL / AHGP / employment / training / socio-economic aspects

B 33 MANPOWER PLAN - THE ALASKA HIGHWAY PIPELINE PROJECT DRAFT: APPENDIX II MANPOWER SUPPLY - ALL PORTIONS CONSTRUCTION PHASE.

Lorcan Co. Ltd.
Calgary, Alberta : Lorcan Co. Ltd., 1979. 57 pp.

331.124 655 FPL App. II

Prepared for Foothills Pipe Lines Ltd. (FPL) this study identifies the supply and source of manpower available for the construction of the Alaska Highway Gas Pipeline (AHGP) project. It is noted that most of the construction manpower complement will be engaged in pipeline construction, compressor and meter station construction.

AHGP / pipeline construction / employment / FPL / socio-economic aspects

B 34 MANPOWER PLAN - THE ALASKA HIGHWAY PIPELINE PROJECT DRAFT: APPENDIX III: MANPOWER REQUIREMENTS - ALL PORTIONS CONSTRUCTION PHASE.

[Foothills Pipe Lines Ltd.]
s.l. : s.n., [1979]. n.p.

331.124 655 FPL App. III

This volume consists of a comprehensive compilation of workforce requirements for the various occupation classifications involved in the construction of the Alaska Highway Gas Pipeline (AHGP) project. The information is based on a schedule which contemplates the construction of the pre-build portion in 1980 and 1981 and the construction of the Yukon portion, and the balance south of 60° portion, in subsequent years. Most of the data are presented in tabular format.

- B 35 1981 SOCIAL, ECONOMIC, CULTURAL: BEAUFORT SEA PROJECT. [NORTHERN PARTICIPATION IN THE BEAUFORT SEA OIL AND GAS EXPLORATION, PRODUCTION AND DEVELOPMENT] [DRAFT].
Dome Petroleum Limited/Canmar.
s.l. : Dome Petroleum Limited, 1981. 21 pp.

330.971 Dome

This draft document highlights Dome's view of its social and environmental responsibility to the residents, communities, and local governments of the north, in light of the company's oil and gas exploration activities in the Beaufort Sea. Dome's corporate policies are presented here, followed by a statement of its programs and practices with regard to northern involvement in the Beaufort Sea Project. Dome states its commitment for local participation in six main areas - community consultation, employment, training and development, economic development, social and cultural support, and northern participation in future Beaufort Sea development.

- B 36 NORTHERN EMPLOYMENT AND TRAINING IN THE OIL AND GAS INDUSTRY.
DPA Group, Inc. and Intergroup Consulting Economists Ltd.
Environmental Studies Revolving Funds Report No. 024.
Ottawa, Ontario : The DPA Group, Inc., 1986. 105 pp.

331.762 218 282 DPA

Commissioned by the Social Issues North Committee of the Environmental Studies Revolving Funds (ESRF), this study determines the key factors which would enhance or inhibit the abilities of oil and gas companies in northern Canada to train and employ northern residents. The study also presents practical recommendations on strategies that would improve the nature and extent of northern participation in northern oil and gas activities. The intent is to provide better industry/government communications and employment policies, while recognizing regional differences in labour force characteristics and employment opportunities. A list of references is included.

- B 38 OIL AND AMULETS. INUIT: A PEOPLE UNITED AT THE TOP OF THE WORLD.
Philip Lauritzen.
edited by R.E. Buehler.
Arctic and Northern Life Series.
s.l. : Breakwater Books Ltd., 1983. 274 pp.

971.9 Lau

This book records the coming together of the Inuit of the United States (Alaska), Canada and Greenland. The purpose of this meeting, held at Barrow, Alaska in 1977, was to lay down the foundation for an inter-arctic organization of the entire Inuit population. A summary of the view-points of the Inuit people is presented. Concern is expressed over the survival of their culture, the Arctic environment, and traditions in the face of the increased development activities in the north by the southern industrial society.

B 39 AN OVERVIEW OF POTENTIAL IMPACTS OF GAS PIPELINE CONSTRUCTION AND OPERATION ON USE AND VALUE OF YUKON FISHERIES.

P. Eby and Associates Limited.

Vancouver, British Columbia : P. Eby and Associates Limited, 1977. various pag.

333.956 1 Feb

The fish resources of the Yukon Territory support a small local commercial fishery and contribute to a much larger commercial fishery in Alaska. By providing sport fishing opportunities for visitors, fish resources contribute to the Yukon's tourist industry, they provide recreational opportunities and support a subsistence fishery of both cultural and economic significance to native peoples. This report, prepared for the Department of Fisheries and Environment (DFO, DOE), provides a preliminary overview of the socio-economic effects on Yukon fisheries, which may result from construction and operation of the proposed Foothills Pipelines (Yukon) Ltd. (FPL(Y)) gas pipeline. A bibliography is included.

B 40 AN OVERVIEW OF PSYCHO-SOCIAL IMPACTS OF RESOURCE DEVELOPMENT IN THE NORTHWEST TERRITORIES.

Blair Dunbar.

[Yellowknife, N.W.T.] : Northwest Territories. Department of Social Services, 1983. 16 pp.

333.823 15 Dun

This report is a Government of the Northwest Territories (GNWT) submission to the Beaufort Sea Environmental Assessment Panel (BSEAP). The GNWT is committed to ensuring that changes in the lifestyles of northern residents, brought about by hydrocarbon exploration and development, are managed for the benefit of the people who are affected. The emphasis is on maximizing the positive aspects of change and minimizing the negative aspects. Adequate social services, health care, policy protection, education, housing, transportation and communication services are identified as necessary components in ensuring expected changes are dealt with effectively by the communities concerned.

- B 41 PRELIMINARY INVESTIGATION OF THE SOCIAL IMPACT OF THE ALASKA HIGHWAY ON YUKON INDIANS: PROBABLE PARALLELS TO THE IMPACT OF PIPELINE CONSTRUCTION.
Julie Cruikshank and Catharine McClellan.
s.l. : s.n., n.d. n.p.

330.971 Cru

The authors of this paper argue that similar negative impacts on the native peoples of southern Yukon, occasioned by the construction of the Alaska Highway, will occur if a gas pipeline is built through the same region. The Alaska Highway was built by a large imported labour force, extremely rapidly, with some short term jobs for native peoples. By the time the construction-related boom had ended, major changes had occurred in the lives of the people who lived near the highway route - changes in their traditional annual cycle, settlement patterns, sources of subsistence and cash income, social organization, health conditions and alcohol use. These changes are discussed and the authors' views on disturbing parallels between the known consequences of the building of the Alaska Highway and the possible consequences of building a gas pipeline are emphasized.

- B 43 SOCIAL AND ECONOMIC ASPECTS OF DOME/CANMAR'S BEAUFORT
SEA PROJECT, 1977.
Mary Collins Consultants Ltd.
Calgary, Alberta : Mary Collins Consultants Ltd., 1977. 109 pp.

333.823 1 Mar 1977

Prepared for Dome Petroleum's subsidiary, Canadian Marine Drilling Limited (Canmar), this report presents a review of Canmar's 1977 drilling operations in the Beaufort Sea. The main focus of the report, however, is an assessment of the manner in which Canmar implemented the terms and conditions of its socio-economic impact commitments. The author considers the demography of the area, economic factors connected to Canmar's activities, and social and cultural aspects. Suggestions concerning future employment and training and potential further socio-economic impacts are outlined.

B 44 "Social and Economic Conditions in Frontier Areas: Business Development."

Don McWatt.

In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.

Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1984. pp. 10-13.

333.823 05 Arc 1984

Small business development in the Beaufort area is the subject of this paper. The author, who represents Beaufort Environmental Support Services, begins by giving some background information on the progress of small business ventures as northern energy development took place. With a very practical emphasis, this paper presents advice and encouragement to people considering a business venture in the Northwest Territories.

Rick Hardy.

In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.

Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1984. pp. 13-14.

333.823 05 Arc 1984

The author of this paper speaks on behalf of the Metis Development Corporation. The background of the establishment of the corporation, which was formed with the intention of reaping any benefits which might accrue from the then proposed Mackenzie Valley pipeline, is outlined. The ownership of the Corporation was removed from the political Metis Association and was put directly into the control of native communities in the Northwest Territories. The paper gives an overview of the corporation's activities, which are mainly in the land holding and property development areas. The author expresses concern over the interpretation of some government regulations, regarding benefits to northerners, and abuse of certain regulations by some members of the industrial community.

Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1984. pp. 23-26.

333.823 05. Arc 1984

The role of the Canada Employment and Immigration Commission (CEIC), as it relates to exploration and development of petroleum resources on Canada lands, is explained in this paper. Specifically, the CEIC's three employment objectives in this area are defined - to maximize employment opportunities generally and for regional labour forces in particular; to increase the level or transfer of skills by the provision of training and development; to ensure that socially and economically disadvantaged groups or individuals have fair and equitable opportunities. The speaker outlines a number of CEIC programs designed to meet the third objective in particular. Funding for programs is outlined as are the affirmative action measures presently in place.

B 47 "Social and Economic Considerations in Frontier Areas: Business Development."

Cam Mackie.

In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.

Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1984. pp. 14-16.

333.823 05 Arc 1984

As Federal Co-ordinator for the Native Economic Development Program, this speaker addresses the government position with regard to native business development in the north and across Canada. The high rate of change in the nature of business development is discussed and the federal government's role in responding to these changes, by providing programs such as the Native Economic Development Program, is explained. The increase of economic self-reliance, promotion of culturally appropriate economic development and community involvement are the stated missions of the program. The author concludes by emphasizing the importance of ensuring that native peoples have access to the wide range of federal government programs available in this field.

333.823 05 Arc 1984

This brief paper discusses the effects of Dome's operations in the Beaufort Sea, with specific reference to Inuvik's experiences. The speaker reviews the objections which were raised to Dome's plans to drill in the Beaufort Sea, as well as the general concerns felt by the people living in the area. In concluding, the speaker emphasizes the need for training for native workers and expresses her opinion that the social changes which took place were not altogether negative ones.

333.823 05 Arc 1984

This author provides a review of the background of the Inuvialuit Development Corporation (IDC), which is a product of the land rights settlement between the federal government and the Inuvialuit. The main concept behind the IDC is to keep the assets of the Inuvialuit people together in corporations that are community owned and controlled. The organizational set-up of the IDC is explained and a review of some of its investments is included. The paper concludes with a general overview of the goals and long term projections for the IDC and the community.

333.823 05 Arc 1984

In this short paper, Esso's policy to ensure that northern residents have opportunities for employment, as a result of the Norman Wells project and Beaufort activities, is discussed. The Norman Wells project involves oil fields development and a pipeline project by Interprovincial Pipelines, and the employment potential of that development is the main focus of the presentation. The speaker outlines the various actions and programs undertaken by Esso, including the role played by transportation and work schedules which were established with a view to allowing employees to spend as much time as possible in their own communities.

B 53 SOCIO-ECONOMIC IMPACT ASSESSMENT OF INDUSTRIAL DEVELOPMENT ON YUKON'S NORTH COAST.

DPA Group Inc.

Calgary, Alberta : DPA Group Inc., 1985. 119 pp.

330.971 91 DPA

Prepared for the Yukon Department of Economic Development, this study assesses the relative positive and negative effects of two potential port developments, on the North Coast of Yukon, in support of offshore oil and gas exploration and production activities. The suggested location for both potential developments is King Point, Yukon. The first alternative is a port and rock quarry facility and the second is a multi-user port development. This study assesses Yukon economic impacts, government financial impacts and social impacts. A comprehensive bibliography is provided.

B 54 SOCIO-ECONOMIC IMPORTANCE OF MARINE WILDLIFE UTILIZATION. W.D. Bracknell.

Canada. Department of Fisheries and Oceans. Beaufort Sea Project. Beaufort Sea Project Technical Report No. 32.

Victoria, British Columbia : Canada. Department of Fisheries and Oceans, 1977. 91 pp.

333.954 12 Bra

This study investigates the socio-economic importance of marine-related renewable resource use to the Inuit, Metis and Indians living adjacent to the Beaufort Sea. Factors considered as socio-economically important include the level and distribution of local and export sales, domestic use of wildlife harvests, employment and income. The resources considered are fish, seals, whales, polar bears and the Arctic fox. The intent of this study is to aid in the assessment of potential changes in the marine environment resulting from offshore drilling activities in the Beaufort Sea which could alter resource use patterns.

Calgary, Alberta : Arctic Institute of North America, University of Calgary, 1981. pp. 186-194.

333.823 15 Fro

This paper addresses the concerns of northern peoples regarding large-scale development, particularly of oil and gas, in the high arctic. The speaker takes a look at the history of northern development and, specifically, examines the expected impact of development proposals which have been considered in the community of Pond Inlet - from the drilling of an exploratory well in Lancaster Sound to the proposed establishment of a full-scale traffic corridor through the Northwest Passage. The author expresses concern over the threat to Inuit lifestyles, socio-economic structure and culture, and emphasizes the importance of preserving the environment which plays such a large role in the lives of northern and native peoples.

B 56 TOWARDS THE MANAGEMENT OF SOCIO-ECONOMIC IMPACTS
RELATED TO THE ALASKA HIGHWAY PIPELINE PROJECT.
IN-MIGRATION/POPULATION. DRAFT.

Denis De Pope.

Winnipeg, Manitoba : Interdisciplinary Systems Ltd., 1978. n.p.

330.971 DeP

All Yukon communities located in or near the proposed Alaska Highway Gas Pipeline (AHGP) corridor, except for Whitehorse, have a population of less than 1000 people. Consequently, it would take reasonably small changes in the population of these communities to cause severe disruptions in their structure and stability. Prepared for the AHGP panel, this report identifies and discusses problems and issues related to the in-migration of pipeline construction workers, and the potential effects of this influx on local communities. As well, current and proposed policies for directly controlling the flow of people into the Yukon are discussed, including the role of federal and territorial governments and trade unions.

B 58 YUKON ECONOMIC PLANNING STUDIES 1965 - 1985. AN ANNOTATED BIBLIOGRAPHY.

Nancy P. Cameron.

[Whitehorse, Yukon Territory] : Yukon. Department of Education, Libraries and Archives Branch, n.d. 317 pp.

016.330 971 91 Cam

This bibliography provides an annotated inventory of Yukon economic planning studies. The scope covers Yukon - specific sectoral and regional economic planning studies, including initiatives of both private and public sectors, for the years 1965 to 1985. The bibliography contains 450 entries for both published and unpublished works including books, government and consultant reports, theses and articles. Entries are organized into 17 major subject divisions and call numbers are given for those items located in the Yukon Archives; for other entries a location code is provided. Personal author, corporate author and subject indices are appended.

B 59 YUKON PIPELINE EMPLOYMENT TRAINING PLAN.

Yukon. Adult and Continuing Education Branch and Manpower and Labour Branch [Government of Yukon].

[Whitehorse, Yukon] : Yukon. Government of Yukon, 1980. 29 pp.

374.013 YTG

This training plan, designed for Yukon residents, provides for access to training and employment opportunities on the construction, operation and maintenance of the proposed Alaska Highway Gas Pipeline (AHGP) project. Specific employment sectors are identified and related training plans, with attached costs, are presented in appendices to the report. These employment sectors include: construction labourer, heavy equipment operator, industrial first aid personnel, truck driver, welder's helper, kitchen helper and clerk.

- B 60 YUKON RESIDENT EMPLOYMENT IN MEGA-PROJECT DEVELOPMENTS.
A SURVEY OF MANPOWER DELIVERY SYSTEMS.
David N. Roddick.
s.l. : [Yukon. Department of Education. Manpower Branch], 1982.
133 pp.

330.971 91 Rod

Based on expected economic growth and employment opportunities, related to construction and development of resource-related industries in the Yukon, this study investigates the impact of mega-developments on local labour markets, manpower delivery services and employment opportunities for local residents. With the intent of providing the Yukon Territorial Government (YTG) with information pertinent to manpower planning and policy, the study examines the labour market and the nature and role of institutions and agencies (government and others). As well, various training and alternate employment services are identified and evaluated with respect to resident participation in mega-project developments. A list of references and contact people is appended.

- B 61 YUKON SEIAN SOCIOECONOMIC IMPACT MODEL.
Alaska Economics, Inc.
Juneau : Alaska Economics, Inc., 1985. 43 pp.

330.971 91 Ala

Prepared for the Yukon Department of Mines and Small Business, and funded by the Northern Oil and Gas Action Program (NOGAP), this document describes the Yukon Socio-Economic Impact Analysis (SEIAN) model. This computerized economic model is designed to promote responsible decision-making by reducing the time spent by analysts on rediscovery, by capturing important behavioral linkages, and by allowing more pertinent data to be considered. The model is presented in line by line detail, an appendix contains an abstract from the "Canada Standard Occupational Classification" and a list of references is provided.

This paper briefly reviews the history of the Prudhoe Bay Field, Alaska, from the perspective of Arco Alaska Inc., the operator of the eastern half of the field (Sohio Alaska Petroleum is the operator of the western half). After describing the environment, this author discusses the current North Slope development and exploration activities and the types of equipment in use for drilling and workovers. The paper concludes with a look at planned and proposed future drilling on the North Slope, Alaska.

- C 3 "Alaska Highway Gas Pipeline Project."
R.C. Johnson, S.D. Shepherdson and R.J. Cooke.
In THE CHALLENGE OF THE EIGHTIES. PROCEEDINGS [OF THE]
NORTHERN TRANSPORTATION CONFERENCE, WHITEHORSE, YUKON,
OCTOBER 5-7, 1982.
Edmonton, Alberta : Co-op Press Ltd., 1982. pp. 99-107.

380.5 Nor

The Alaska Highway Gas Pipeline (AHGP) project is described in this paper, principally in the context of its impact on the transportation system of northern Canada. The project is described in terms of route, terrain, economic impacts, the nature of its construction, management and regulatory aspects. The logistics plans for the movement of material and construction personnel are described in some detail. The authors note that the pipeline system constitutes a major incremental addition to the north's transportation infrastructure and the first section of this paper provides a brief discussion of this aspect. Maps, diagrams and tables are included.

pp. 131-142.

553.282 Wal

This paper examines the hydrocarbon potential of the offshore waters in the Arctic and the Bering Sea. The harsh environment and the seasonal restrictions caused by storm intensity and ice are discussed briefly in terms of their impact on the economic feasibility of developing hydrocarbon reserves. Estimates of Alaskan offshore potential in various basins are given, including a detailed geological description. The authors conclude that while the Alaskan offshore waters could provide the only remaining U.S. potential for discovering significant numbers of giant oil and gas fields, each location identified will require a "super-giant" oil field to reach the threshold level needed for development.

Transport Canada Report No. TP 7371E.
Ottawa, Ontario : Canada. Transport Canada. Canadian Coast Guard,
1986. 298 pp.

627.3 Tue

The concept of loading Arctic tankers from exposed terminals in the Arctic offshore has been the subject of several investigations. In this particular study, based on the experience gained by Canadian Marine Drilling Limited (Canmar) in the operation of Arctic mobile drilling caissons, and on review of previous studies it is clearly indicated that an approach by vessel to an exposed terminal production facility during the winter is feasible. This report investigates the mooring and loading concepts and techniques, the associated equipment and its cost, as well as the related downtime for year round Arctic operations at exposed terminals. Numerous graphs, tables and diagrams are included and there is a list of references.

380.5 Nor

Oil and gas exploration in the Arctic Islands presents operators with transportation problems in two areas. Firstly, the movement of workers, equipment, materials and supplies to support the exploration venture; this author defines problems encountered and describes methods used to solve them. Secondly, the need for efficient and safe transportation of discovered hydrocarbons; the relative merits of several transportation systems, including ice-breaking tankers, submarine tankers, and pipelines, are reviewed.

622.182 82 CODD 1981

This author is a senior drilling engineer with Arco Alaska and this paper describes Arco's experiences during the development of the Prudhoe Bay field, and during the exploration of North Slope areas of Alaska. The pre-and post-start-up servicing procedures are described and the problems encountered due to arctic conditions, such as the freeze-up of the fluids used for servicing, are discussed. The article is illustrated and a question and answer period, which followed the presentation, is documented.

C 14 "Beaufort Sea Drilling with Low-toxicity, Oil-based Mud."

C.A. Johancsik.

In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION PROCEEDINGS, CALGARY, ALBERTA, OCTOBER 28-31, 1986.

Calgary, Alberta : Arctic Offshore Technology Conference, 1986.

18 pp.

665.502 8 Arc 1986

This paper highlights case histories of wells drilled with a low-toxicity, oil-based drilling fluid in the Beaufort Sea in the spring of 1985. It is reported that some of the severe problems which had been encountered with water-based mud were virtually eliminated. The authors, who represent Esso Resources Canada Limited, indicate, however, that although significant improvements are realized with oil mud, drill hole stability may continue to be a problem in Beaufort Sea drilling.

A. Churcher.
In THE CHALLENGE OF THE EIGHTIES. PROCEEDINGS [OF THE] NORTHERN TRANSPORTATION CONFERENCE, WHITEHORSE, YUKON, OCTOBER 5-7, 1982.
Edmonton, Alberta : Co-op Press Ltd., 1982. pp. 108-110.

380.5 Nor

This paper presents the results of a study analyzing the economic, environmental and technical characteristics of the use of tankers and pipelines for transporting oil and gas from the Beaufort Sea. Performance and safety characteristics of tankers and pipelines are compared and it is argued that while both systems are feasible, costing of pipeline projects is unreliable and predicting the performance of ice-breaking tankers is difficult. Therefore, until the industry has a better understanding of the major parameters of the options, by conducting demonstration projects and experiments, it is suggested that a global decision is not possible.

C 17 BENT HORN PRODUCTION PROJECT. APPLICATION FOR DEVELOPMENT PLAN APPROVAL. I - PROJECT SUMMARY.

Panarctic Oils Ltd.

s.l. : Panarctic Oils Ltd., 1984. 56 pp.

333.823 15 Pan v. 1

This description of the Panarctic Oils Ltd. proposal, to develop the Bent Horn oil field on Cameron Island, N.W.T., serves as Panarctic's application to the Canadian Oil and Gas Lands Administration (COGLA) for development plan approval. The Bent Horn project is a phased development of a small oil deposit with all production and storage facilities located on land. Transportation of the oil, by tankers, is planned only for summers. This document also provides socio-economic and environmental evaluations of the project, and oil spill contingency plans are presented.

Panarctic Oils Ltd.

s.l. : Panarctic Oils Ltd., 1984. 25 pp.

333.823 15 Pan v. 7

This contingency plan was prepared to document Panarctic's response to any foreseeable emergency situation which may arise from the proposed Bent Horn production project on Cameron Island, N.W.T. Emergency situations addressed include serious injury or death of personnel, aircraft accidents, fires, explosions, loss of well control, ruptures or leaks in pipelines and oil or chemical spills on land. In addition, the plan addresses reporting procedures, training and equipment availability. The plan was compiled to comply with the safety regulations administered by the Canadian Oil and Gas Lands Administration (COGLA).

C 24 CANADIAN ARCTIC MARINE ENERGY PROJECTS. PRESENTATION TO THE SPECIAL COMMITTEE OF THE SENATE ON THE NORTHERN PIPELINE.

Canadian Arctic Resource Committee.

Ottawa, Ontario : Canadian Arctic Resources Committee, 1982.

52 pp.

333.823 15 CARC

This presentation focuses on the projects which have been proposed to transport hydrocarbon resources from the Canadian Arctic by marine mode. Particular emphasis is given to the plans to transport Beaufort Sea oil and Melville Island Gas (the Arctic Pilot Project). The hydrocarbon industry's plans for the Beaufort Sea are reviewed and then analyzed in terms of a number of constraints (geology, economics, technology, markets, research needs and government policy) to determine the probability of early development. The projects which have been proposed to transport Sverdrup Basin hydrocarbons are also discussed.

This paper traces the history of hydrographic surveying in Canada's Arctic and looks briefly at the geography of the Arctic, activities of early explorers and the development of Canadian Arctic marine transportation routes. The current status of hydrographic charting north of 60° is described and the impact of hydrocarbon exploration and mining on the Canadian Hydrographic Service (CHS) is discussed. The CHS research and development program, aimed largely at resolving problems associated with surveying in ice-covered waters, is examined. Maps, photographs and diagrams illustrate this paper and a list of references is included.

665.502 8 Arc 1986

Incorporated by Dome Petroleum Limited in 1973 to carry out floating drilling operations in the Beaufort Sea, Canadian Marine Drilling Limited (Canmar) drilled 31 wells from 1976 to the end of 1986. Many of the wells present abnormal pressures and other hazards which require safety conscious crews and safety procedures. This paper highlights the way in which comprehensive planning at Canmar results in good work safety records and reduces overall costs due to lost hours and operational downtime.

- C 33 CONCEPTS AND TECHNIQUES IN OIL AND GAS EXPLORATION.
edited by Kamal C. Jain and Rui J.P. deFigueiredo.
Tulsa, Oklahoma : Society of Exploration Geophysicists, 1982.
289 pp.

622.182 8 Jai

This publication presents an overview of modern exploration practices in the field of oil and gas development. Two major exploration methods are examined in detail - seismic exploration and well log prospecting. Emphasis is generally on the concepts, although several techniques are presented to show the state-of-the-art in exploration practices. This book also looks into areas of new development as well as looking back at the geologic basis for the habitats of hydrocarbons. Illustrations, some in colour, appear throughout the volume. Each chapter includes a list of references and an index is provided.

- C 34 "Construction and Installation of Deepwater Floating Systems."
Andrea Mangiavacchi and Philip Rawstron.
In HARSH ENVIRONMENT AND DEEPWATER HANDBOOK.
edited by Robert G. Burke.
Houston, Texas : Pennwell Publishing Company. Energy Group, 1985.
pp. 133-141.

622.182 82 Har 1985

This article discusses various alternatives for using floating production systems in developing offshore hydrocarbon reserves and considers related systems and subsystems. A floating production system covers a variety of concepts such as production facilities on or in the vessel, subsea wellheads, production risers, and a storage or transportation system, but not all systems include each of these components. The authors devote a short section of this article to the deployment of these structures in the Beaufort Sea, Bering Sea and other Arctic regions.

EDMONTON, ALBERTA, SEPTEMBER 12-14, 1983.
Calgary, Alberta : s.n., 1983. 11 pp.

622.182 82 CODD 1983

In 1981, faced with the possibility of insufficient drilling equipment to meet accelerated industry exploration programs in the Beaufort Sea, Gulf Canada Resources Inc. elected to build a major new drilling system able to operate in the various water depths encountered in the Beaufort and capable of operating beyond the regular drilling season for conventional drillships. This paper describes the drilling system, to be operated by Gulf's subsidiary, BeauDril. It includes two drilling units - Kulluk and Molikpaq - two ice-breakers, two ice-breaking supply vessels, a large administration base and a marine base.

Panarctic Oils Ltd.
Calgary, Alberta : Panarctic Oils Ltd., 1983. 104 pp.

628.168 33 Pan

Prepared in response to the 1980 Canada Oil and Gas Drilling Regulations, this Panarctic contingency plan assigns administrative responsibility, and outlines procedures to be followed, in the event of: serious injury or death of personnel, an accident involving aircraft, fire, hydrocarbon or chemical spill, or the loss of well control. Panarctic's offshore drilling program for the 1983-84 drilling period, to take place in the Arctic Islands, is outlined, including reference to physical environment and biological and socio-economic sensitivity.

Robert J. Whyte.
In THE CHALLENGE OF THE EIGHTIES. PROCEEDINGS [OF THE] NORTHERN TRANSPORTATION CONFERENCE, WHITEHORSE, YUKON, OCTOBER 5-7, 1982.
Edmonton, Alberta : Co-op Press Ltd., 1982. pp. 53-57.

380.5 Nor

On behalf of Esso Resources Canada Limited, this speaker describes development at Norman Wells and the company's plans for Beaufort Sea hydrocarbon development. Various modes of transportation are described - barging on the Mackenzie River, use of corporate aircraft, winter roads and marine transportation. It is argued that conventional transportation systems, such as barging, trucking and air, are adequate to service most of Esso's future development plans.

338.272 8 Cru

The data included in this report were compiled using information obtained from surveying all companies involved in oil and gas exploration, development, and production in Canada. The survey results cover the value of marketable production, the number of employees in the industry, operating and capital expenditures, drilling completions, established hydrocarbon reserves, and marketable natural gas reserves. A list of definitions is provided as well as a short list of publications on energy and mineral statistics.

620.411 3 Off

The design, installation, and performance of a berm-supported exploration structure in a dynamic ice environment is presented in this paper. Details are provided on design considerations, foundation characteristics, and extreme temperatures. A case history is presented which includes a discussion of on-site placement modifications which were necessitated by extreme ice conditions. The success of the modified placement technique is confirmed through a review of the caisson performance during a drilling season. This paper is illustrated and a short bibliography is included.

In support of Sohio's efforts to continue the production and initial processing of oil from Prudhoe Bay, Alaska, production equipment must be shipped there every year. All production equipment, piping and ancillary electrical and control systems are pre-assembled, in the lower 48 states, inside environmentally controlled enclosures called modules. The modules are transported by barge to the Prudhoe Bay dock. The paper discusses the reasons for choosing this method of construction and the development of design criteria for the safe sea-lifting and transportation of such structures. The paper is illustrated and a short glossary is provided.

C 47 "Development of Beaufort Sea Hydrocarbons: An Opportunity for Canadian Industry."

Murray B. Todd.

In FRONTIER OIL AND GAS DEVELOPMENT: THE DECADE AHEAD. PROCEEDINGS OF THE TENTH ENVIRONMENTAL WORKSHOP, MONTEBELLO, QUEBEC, APRIL 28-MAY 1, 1981.

edited by Claudette Reed Upton.

The Arctic Petroleum Operators' Association (APOA) et al.

Calgary, Alberta : Arctic Institute of North America, University of Calgary, 1981. pp. 61-87.

333.823 15 Fro

The author of this paper discusses the potential benefits, to the Canadian economy, from the industrial stimulation associated with the development of new oil and gas reserves, particularly with reference to Dome's activities in the Beaufort Sea. Dome Petroleum estimates that 85 per cent of the goods and services associated with the exploration, development and transportation of hydrocarbons in the Beaufort Sea can be sourced in Canada, with the cooperation of the industrial sector and the government. Potential benefits to several industries are examined - ship building, construction, drilling, steel, and research and development. The author goes into considerable detail and provides numerous graphs and tables to illustrate his presentation.

The Canadian Arctic Islands are known to contain large proven reserves of oil and gas. To successfully explore this territory, Panarctic Oils has established transportation methods for moving exploratory drilling rigs, supplies, construction equipment and personnel to remote drill sites. The authors of this paper, who represent Panarctic Oils, describe these methods, which include sea and air transportation, and which are used both onshore and offshore. The procedures for constructing roads to accommodate transport vehicles and airstrips, utilizing the features of the Arctic climate and terrain, are described as is the design of drilling rig components for transport. This paper is illustrated and a short list of references is provided.

- C 53 ENGINEERING MANPOWER REQUIREMENTS 1980-2000 FOR MAJOR
ENERGY-RELATED PROJECTS IN CANADA: A BROAD BRUSH
APPRAISAL.
Foster Research.
Ottawa, Ontario : Canadian Council of Professional Engineers, 1980.
29 pp.

331.762 Fos

The purpose of this report is to determine the requirements for professional engineers to design, construct and operate major energy-related projects in Canada over the period 1980-2000. A nation-wide list of projects in the energy field, as foreseen by the authors, is provided. The authors transcribe these projects into estimated requirements for engineers through the use of indices which relate to types and estimated capital costs of the projects considered. The report suggests that there will be great challenges and opportunities for Canadian professional engineers, scientists, technicians, technologists and skilled trades people as major energy-related projects unfold.

665.502 8 Arc 1986

Conventional offshore drilling operations normally install wellhead facilities flush with the seafloor, with ancillary equipment, such as blowout preventors, exposed above the seafloor. In northern latitudes such as the Beaufort Sea, where ice ridges and icebergs are present, the possibility exists that the keels of ice features may impact and damage any exposed facilities. Gloryholes, which are excavations in the seafloor, enable wellhead and associated equipment to be relocated below the ice interaction zone. In this paper, recent gloryhole excavation experience is reviewed as a background to highlighting a specific project in which a large diameter cased gloryhole was excavated during 1986. The primary purpose of the exercise was to provide the Kulluk, Gulf's ice strengthened conical drilling unit, with a complete well package capability, including gloryhole excavation.

- C 66 "Issungnak - Esso Resources' Largest Artificial Island."
Charles T. Williams.
In CONFERENCE ON CANADIAN OFFSHORE DRILLING AND
DOWNHOLE TECHNOLOGY (CODD), [TEXTS OF PAPERS
PRESENTED]. EDMONTON, ALBERTA, SEPTEMBER 14-16, 1981.
s.l. : s.n., 1981. n.p.

622.182 82 CODD 1981

Issungnak, the 15th and largest artificial drilling island built by Esso [to September 1981] is located in the Beaufort area just north of the 70° latitude. This paper discusses the feasibility of artificial islands for drilling, island construction, maintenance, and Esso's drilling program. Two wells drilled from Issungnak are focused upon and the author identifies the factors considered in the economic feasibility of artificial islands - these are water depth, the short working season (mid-July to mid-October), safety, capital investment and technology.

In THE CHALLENGE OF THE EIGHTIES. PROCEEDINGS [OF THE]
NORTHERN TRANSPORTATION CONFERENCE, WHITEHORSE, YUKON,
OCTOBER 5-7, 1982.
Edmonton, Alberta : Co-op Press Ltd., 1982. pp. 158-162.

380.5 Nor

This paper discusses the feasibility of shipping liquified natural gas (LNG) from Arctic locations to southern markets using conventional LNG containment systems in ice-breaking tankers. The author views this system as a practical and economic alternative to pipeline transportation methods. Research into ship design for Arctic operations is discussed and it is noted that the containment system selected for use in these tankers must provide isolation of the LNG tank from the vibrations and stresses in the ship's hull caused by ice-breaking operations.

conferences / transportation, marine / tankers / LNG / ice-breaking vessels / Arctic / technology

s.l. : Esso Resources Canada Limited, 1982-1984. various pag.

330.971 Ess

These Canadian benefits annual reports are provided in response to the Canada Benefits Program commitment, in support of the exploration agreements between Esso and the Canadian Oil and Gas Lands Administration (COGLA). The reports summarize Esso's actions and results in achieving Canadian and northern benefits from its exploration activities during each year, quantitatively and qualitatively. As well, Esso's performance against the commitments for Canadian industrial benefits, employment and training, and northern benefits is measured. The company's exploration activities and financial outlook are updated and socio-economic considerations of its operations are discussed.

FAIRMONT, B.C., MAY 12-15, 1985.
Calgary, Alberta : Arctic Petroleum Operators' Association
(APOA)/Canadian Petroleum Association-Offshore Operators' Division
(CPA-OOD), 1985. pp. 2-9.

333.823 05 Arc 1985

This address presents an overview of the theme of the May 1985 workshop sponsored by the Arctic Petroleum Operators' Association and the Canadian Petroleum Association-Offshore Operators' Division. The speaker defines a conventional production area as one for which well-established technology exists to explore, produce, and market hydrocarbons. Environmental considerations, finance, and regulations are looked at and while the speaker offers his thoughts about what conventional oil and gas production means to Alberta, he also offers his opinion that the frontier areas will soon qualify as conventional production areas.

- C 72 "Molikpaq: The First Move."
Dorothy Greenidge.
In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION
PROCEEDINGS, CALGARY, ALBERTA, OCTOBER 28-31, 1986.
Calgary, Alberta : Arctic Offshore Technology Conference, 1986.
9 pp.

665.502 8 Arc 1986

Gulf Canada, as part of its hydrocarbon exploration program in the Beaufort Sea, has constructed a steel bottom-founded drilling platform - Molikpaq - which is a caisson-retained island capable of drilling in water depths to 40 meters, year round. Molikpaq is designed to be moved, as a single unit, to any drilling location but this is an operation requiring careful planning and coordination of many special functions. This paper describes Molikpaq's first move, from the Tarsiut location to the Amauligak location, which took place over seven days in September 1985 in reportedly the worst summer ice season in several years.

- C 73 "Mooring and Anchoring in Ice-Infested Waters."
D.G. Owen and G.H. Smith.
In FOURTH INTERNATIONAL OFFSHORE MECHANICS AND ARCTIC
ENGINEERING SYMPOSIUM: PROCEEDINGS, DALLAS, TEXAS,
FEBRUARY 17-21, 1985. [vol. 1]
edited by Jin S. Chung et al.
New York, New York : American Society of Mechanical Engineers,
1985. pp. 424-429.

620.411 3 Off

The integrity of moorings and anchorages is a vital element in offshore production. In ice-affected areas they need special consideration because of the high loads imposed by ice and the unusual characteristics of the seabed. This paper examines the potential role of moorings for structures in ice-infested waters and identifies the need for research in specific areas.

C 74

"Multi-modal Transportation Systems."

Ross A. Walker.

In THE CHALLENGE OF THE EIGHTIES. PROCEEDINGS [OF THE] NORTHERN TRANSPORTATION CONFERENCE, WHITEHORSE, YUKON, OCTOBER 5-7, 1982.

Edmonton, Alberta : Co-op Press Ltd., 1982. pp. 123-125.

380.5 Nor

This paper presents a summary of various multi-modal transportation systems in operation in northern Canada and Alaska. The author briefly reviews the background to the "Arctic Oil and Gas by Rail" report which studied the technical feasibility and cost of transporting oil and liquified natural gas (LNG) from Prudhoe Bay, via the Mackenzie Delta, by rail. Successful multi-modal operations described include the White Pass and Yukon Route and CN Rail barge operations to Alaska.

C 75

"The Navarin Challenge - Chinook Helicopters in the Bering Sea."

R.L. Larew.

In INTERNATIONAL POLAR TRANSPORTATION CONFERENCE, VANCOUVER, B.C., 1986. [vol. 2].

edited by Aileen Cassidy and David Dickins.

Vancouver, British Columbia : D.F. Dickins Associates, 1986. pp. 452-461.

380.509 11 IPTC

The author of this paper describes the preparation, planning and operational stages of a helicopter transportation system for oil companies exploring in the Bering Sea. Amoco, Exxon, Shell and Arco entered into a shared agreement, as far as contracting the helicopters and building the necessary support facilities, and this agreement is outlined here. The number of flights, general use of the helicopters, the impact of weather conditions and the technical specifications of the helicopters are detailed and photographs are provided.

G.R. Harrison.
In MARINE TRANSPORTATION AND HIGH ARCTIC DEVELOPMENT:
POLICY FRAMEWORK AND PRIORITIES: SYMPOSIUM PROCEEDINGS,
MONTEBELLO, QUEBEC, MARCH 21-23, 1979.
s.l. : Canadian Arctic Resources Committee (CARC), 1979.
pp. 45-58.

330.971 9 Mar

This author suggests there are two keys to safe and timely development of the Arctic: 1) vigorous oil and gas exploration; and 2) development of an arctic marine technology through research and development, emphasizing field experimentation and pilot projects. Dome Petroleum's experiences in the Beaufort Sea are discussed, including the feasibility of transporting oil by pipeline and ice-breaking carrier. Several areas requiring intensified research and development are identified - optimum design characteristics and performance expectations for ice-breaking vessels; techniques which give high resolution measurement of ice properties and ship traffic conditions; practical field methods to break up high-strength ice-forms; improved understanding of the effect of oil in Arctic waters; and improved systems for oilspill clean-up in ice-covered waters.

C 78 "Norman Wells Expansion Project."

James Deyell.

In CONFERENCE ON CANADIAN OFFSHORE DRILLING AND DOWNHOLE TECHNOLOGY (CODD). [TEXTS OF PAPERS PRESENTED] EDMONTON, ALBERTA, SEPTEMBER 12-14, 1983.

Calgary, Alberta : s.n., 1983. 22 pp.

622.182 82 CODD 1983

This speaker discusses Esso Resources Canada Limited's plans for expanding the capacity of the Norman Wells oilfield from 475 to 4000 cubic meters per day. The expansion includes drilling over 150 new wells, constructing six artificial islands and a central processing plant. Although Esso places emphasis on using existing oil field technology to minimize risk, the author notes that the project presents some unique challenges because most of the oil-bearing reservoir is located directly under the Mackenzie River and because the project site is in a culturally and environmentally sensitive remote location that has a harsh climate.

C 83 "Offshore Emergency Response/Contingency Plans."

C.A. Bonke.

In TWELFTH ANNUAL ARCTIC ENVIRONMENTAL WORKSHOP: ISSUES OF THE 80'S, FAIRMONT, B.C., MAY 8-11, 1983 (CANADIAN PETROLEUM ASSOCIATION (CPA), EASTCOAST PETROLEUM OPERATORS' ASSOCIATION (EPOA) AND ARCTIC PETROLEUM OPERATORS' ASSOCIATION (APOA)).

Calgary, Alberta : Canadian Petroleum Association, 1983. pp. 99-101.

333.823 05 Arc 1983

Speaking on behalf of the Eastcoast Petroleum Operators' Association (EPOA) and Arctic Petroleum Operators' Association (APOA) Offshore Safety Task Force, this author emphasizes the need for all offshore operators to have an effective emergency response plan to assist in saving lives and property in the event of an emergency. In this review of the Task Force's Study of existing plans, completeness, effectiveness, compatibility and ability of plans to be understood and implemented are examined and the author briefly comments on each of these components.

- C 84 "Offshore Safety Programs During Exploratory Drilling Operations."
F.C. Smith.

In TWELFTH ANNUAL ARCTIC ENVIRONMENTAL WORKSHOP: ISSUES OF THE 80'S, FAIRMONT, B.C., MAY 8-11, 1983 (CANADIAN PETROLEUM ASSOCIATION (CPA), EASTCOAST PETROLEUM OPERATORS' ASSOCIATION (EPOA) AND ARCTIC PETROLEUM OPERATORS' ASSOCIATION (APOA)).

Calgary, Alberta : Canadian Petroleum Association, 1983. pp. 93-98.

333.823 05 Arc 1983

The author of this paper explains that the role of a safety program, with reference to safety in marine emergencies offshore, is largely to maintain the awareness of difficulties that may be present in an extreme situation, and to keep the personnel involved familiar with the equipment and procedures necessary to minimize the losses that may occur. In this instance, the conservation of human life and the prevention of injuries is the primary consideration. The results of a questionnaire, concerning safety programs for offshore workers, which had been circulated to operating and contracting companies, are summarized in this presentation. The frequency and types of safety drills held are noted and areas of strength and weakness in performance and procedures are examined.

- C 85 "Offshore Safety Task Force Report."

Bill Rama.

In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.

Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA), 1984. pp. 68-73.

333.823 05 Arc 1984

Presented mainly in tabular format, this paper highlights the composition of the Offshore Safety Task Force, the topics studied and its conclusions and recommendations. Specifically, the report examines safety, training programs, emergency response plans and a review and implementation process for approving safety standards in the offshore oil industry. Although the Task Force focuses on the industry's activities and procedures, government activities and requirements are considered where pertinent. The Task Force Study is a joint effort by the Eastcoast Petroleum Operators' Association (EPOA) and the Arctic Petroleum Operators' Association (APOA).

pp. 143-176.

553.282 Wal

The east coast and Arctic basins of Canada have been subjected to
serious hydrocarbon exploration for over 20 years and five of the
most thoroughly explored areas are the Beaufort, Sverdrup,
Labrador, East Newfoundland and Scotian basins. In this paper,
examples of discoveries from each of these basins illustrate the
factors that control the accumulation of hydrocarbons. As well, the
authors discuss the harsh physical environment in these basins and
the high costs involved in developing the resources located there.
The authors contend that the future role that these basins will play
in supplying hydrocarbons will depend on their ability to compete
economically with the alternative sources of hydrocarbon supplies,
particularly the oil sands resources of western Canada.

- C 88 "On Pipelines for the Arctic Offshore and Considerations About Design, Construction and Operations."
M.L. Fernandez.
In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION PROCEEDINGS, CALGARY, ALBERTA, OCTOBER 28-31, 1986.
Calgary, Alberta : Arctic Offshore Technology Conference, 1986.
n.p.

665.502 8 Arc 1986

From operating experience of marine equipment utilized in the Beaufort Sea, from current understanding of the Arctic environment and from existing knowledge of offshore pipelines, this author states that it is reasonable to assume that offshore Arctic pipelines can be safely and economically built and operated. Concerns from regulatory bodies and economic constraints can be met with proper engineering practices, including planning and management. This paper provides an overview of these aspects with a discussion of concerns considered to be most important.

Petroleum Resources Communication Foundation.
3rd edition.
Calgary, Alberta : Petroleum Resources Communication Foundation, 1985. 63 pp.

622.182 8 Pet

Written for the general reader, this book provides information and facts about exploration, production, transportation and other activities and functions related to crude oil and natural gas in Canada. The evolution of the oil and gas industries, exploration geology, drilling, processing, refining and petrochemical by-products are among the topics discussed. The challenges of accessing unconventional sources of oil and gas in the north and east coast offshore areas, and heavy oil and oil sands developments in Alberta, are discussed.

POLICY FRAMEWORK AND PRIORITIES: SYMPOSIUM PROCEEDINGS,
MONTEBELLO, QUEBEC MARCH 21-23, 1979.
s.l. : Canadian Arctic Resources Committee (CARC), 1979.
pp. 30-40.

330.971 9 Mar

The Canadian Marine Transportation Administration focuses on the
necessity of providing government marine services for Arctic projects
and on trying to ensure that Canadian shipowners are given maximum
consideration. Exploration for gas and oil in the Beaufort Sea, and
exploration, development and transportation of hydrocarbons from the
Sverdrup area are the major Arctic activities requiring marine
services, but services in support of pipeline construction, repair and
pollution containment are also touched on. Ice-breaking, navigation
systems, search and rescue and safety regulations are discussed and
the federal government's transportation policy is briefly outlined.

pp. 477-486.

343.077 2 Alb

This article analyzes the practical problems of drilling funds - organizations, formed by oil and gas operators, which raise funds for use in drilling and exploration through the sale to the public of interests in limited partnerships. The article discusses the question of registering a fund formed in the United States under Canadian oil and gas jurisdictions, the number of members that the drilling fund partnership may have and the name it may use. As well, the question of whether or not a drilling fund qualifies under section 55 of the Canada Oil and Gas Land Regulations, in respect to ownership of leases by drilling fund partnerships, is discussed.

- C 101 REPORT ON GULF'S BEAUFORT DRILLING SYSTEM.
Gulf Canada Resources Inc.
s.l. : Gulf Canada Resources Inc., 1982. 9 pp.

PAM 1982-36

After presenting a brief overview of Gulf's activities in the search for oil and gas in Canada's western Arctic since the 1960s, this brochure reviews Gulf's development of offshore drilling systems which can withstand the forces of moving ice and thus allow longer operational periods in the Beaufort Sea each year. Two units are discussed - the (floating) conical drill unit and the mobile arctic caisson - including their design, construction and operation in ice-infested seas. In a wider view of Gulf's Beaufort Sea drilling program, this brochure discusses the utilization of supply vessels and ice-breaking vessels, and the socio-economic impacts of Gulf's operations on the people in the northern communities in the exploration areas.

pp. 19-38.

380.509 11 IPTC

The development and marketing of Arctic resources is dependent upon adequate transportation facilities, including marine transportation systems. This paper discusses the organization, conduct and results of studies of ice conditions and ship performance along potential Arctic commercial routes, in the Bering, Chukchi and Beaufort Seas, for both summer and winter. The intent of the studies is to provide data for use in developing guidelines for commercial vessels which can operate safely in all seasons in the Arctic. This paper is illustrated.

- C 105 "A Review of the Drilling Activities on the Amauligak Structure Using the BeauDril Molikpaq Vessel."
T.J. Thomas and G.A. Pidcock.
In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION PROCEEDINGS, CALGARY, ALBERTA, OCTOBER 28-31, 1986.
Calgary, Alberta : Arctic Offshore Technology Conference, 1986.
12 pp.

665.502 8 Arc 1986

This paper outlines various aspects regarding the planning and execution of the drilling program, utilizing BeauDril's bottom founded Molikpaq drilling vessel, in the Amauligak location in the Beaufort Sea. Special reference is made to those areas of new and unusual engineering techniques. The text of this technical paper is supplemented by a map, diagrams and a table.

C 106 "A Review of the National Energy Board Report on Gas Export, August 1970."

D.W. MacFarlane and G.A. Connell.

In THE CANADIAN ARCTIC AND NORTHERN REGIONS AND OTHER SELECTED MATTERS OF CURRENT INTEREST TO THE OIL AND GAS INDUSTRY: PETROLEUM LAW SUPPLEMENT.

Alberta Law Review.

edited by Maurice J. Sychuk.

Alberta Law Review: Special Issue, vol. x No. 3, 1972.

Edmonton, Alberta : University of Edmonton, Faculty of Law, 1972. pp. 523-530.

343.077 2 Alb

This paper deals with the National Energy Board's (NEB) disposition of applications to export gas from Canada. The authors tabulate the total quantity of gas and number of years for which export licences were sought and the quantity and term which the Board approved. The NEB's surplus calculation formula is examined section by section: supply (total established reserves, deferred reserves and reserves beyond economic reach); domestic supply requirements; future surplus; border price.

NEB / government / marketing / exports / natural gas / natural gas requirements

C 107 "Risk Management and Insurance Concerns."

J.M. Gordon.

In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION PROCEEDINGS, CALGARY, ALBERTA, OCTOBER 28-31, 1986.

Calgary, Alberta : Arctic Offshore Technology Conference, 1986.

10 pp.

665.502 8 Arc 1986

This author opines that while insurance costs generally are increasing, coverage and quality are decreasing. Insurance for frontier exploration activity has been affected to the extent that insurance premiums may represent ten per cent of offshore drilling expense yet, in the event of loss, coverage rarely provides the protection expected. This paper reviews these developments, in both cause and effect, specifically as they apply to the Arctic.

conferences / risk management / insurance / exploration / Arctic / drilling, offshore

- C 108 "Risk Management in the Offshore, Do We Have It Right?"
Bill Pomfret.
In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION
PROCEEDINGS, CALGARY, ALBERTA, OCTOBER 28-31, 1986:
SAFETY SESSION.
Calgary, Alberta : Arctic Offshore Technology Conference, 1986.
19 pp.
665.502 8 Arc 1986

This speaker presents an overview of the risk management process and its interface with the ever-increasing costs of offshore insurance. The emphasis is on the one main goal of risk management - to protect corporate assets and profits by reducing the potential for loss before it occurs. For the purposes of this paper, risk is defined as any situation arising out of an organization's activities which can give rise to loss, injury, damage, liability or impairment of growth in social, moral or financial terms. The author argues that offshore operators in north America do not "have it right" and presents case histories in support of this as well as some basic roles of risk management.

conferences / risk management / insurance / drilling, offshore / operations / safety measures

- C 109 "Safety and Life Saving Equipment."
Scott Little.
In TWELFTH ANNUAL ARCTIC ENVIRONMENTAL WORKSHOP: ISSUES
OF THE 80'S, FAIRMONT, B.C., MAY 8-11, 1983 (CANADIAN
PETROLEUM ASSOCIATION (CPA), EASTCOAST PETROLEUM
OPERATORS' ASSOCIATION (EPOA) AND ARCTIC PETROLEUM
OPERATORS' ASSOCIATION (APOA)).
Calgary, Alberta : Canadian Petroleum Association, 1983. pp. 83-86.
333.823 05 Arc 1983

This paper highlights safety and life saving concerns, relative to the marine environment as viewed by the Eastcoast Petroleum Operators' Association (EPOA) and Arctic Petroleum Operators' Association (APOA) Offshore Safety Task Force. A variety of equipment available for use by offshore operators is listed. Specifically, evacuation methods and systems are discussed and the capabilities of immersion suits for increasing survival in an emergency situation are examined. However, the need for further investigation of equipment and techniques is expressed and the Task Force's final report is expected to address this matter.

- C 110 SAILING DIRECTIONS - ARCTIC CANADA. VOL. III.
Canada. Department of Fisheries and Oceans.
4th edition.
Ottawa, Ontario : Canada. Department of Fisheries and Oceans, 1986.
255 pp.
- 917.199 Can

This volume amplifies charted details and contains information needed for safe navigation, which is not available from Canadian charts or other hydrographic publications. Prepared by the Canadian Hydrographic Service (CHS) of the Department of Fisheries and Oceans (DFO) this volume covers the following locations: Beaufort Sea (east part); Amundsen Gulf; Dolphin and Union Strait; Coronation Gulf; Dease Strait; Queen Maud Gulf; Simpson Strait to Larsen Sound; Victoria Strait to Parry Channel; Parry Channel (west part); Parry Islands; and Sverdrup Islands. In addition to information on tides, water levels and currents, potential hazards such as pingos, artificial islands, caisson retained islands, and drilling vessels related to hydrocarbon exploration are located. The volume is indexed and a short glossary of Inuit words is included.

C 111 SEISMIC STRATIGRAPHY - APPLICATIONS TO HYDROCARBON EXPLORATION.

edited by Charles E. Payton.

Tulsa, Oklahoma : American Association of Petroleum Geologists, 1977.
516 pp.

622.182 82 Pay

This technical volume describes seismic stratigraphy as one of the fastest growing geoscience disciplines. While the basic concepts of seismic response were explained over 20 years ago, the routine use of these concepts for interpreting hydrocarbon reservoir conditions required modern electronic technology. The author describes the principles of seismic stratigraphy, the qualitative approach to stratigraphic interpretations and also presents techniques and examples of modeling. This book is illustrated and a keyword index is provided.

C 112 "Selected Cases, Legislation and Developments in Oil and Gas Law."
Rowland J. Harrison.

In THE CANADIAN ARCTIC AND NORTHERN REGIONS AND OTHER
SELECTED MATTERS OF CURRENT INTEREST TO THE OIL AND GAS
INDUSTRY: PETROLEUM LAW SUPPLEMENT.

edited by Maurice J. Sychuk.

Alberta Law Review: Special Issue, Vol. x No. 3, 1972.

Edmonton, Alberta : University of Edmonton, Faculty of Law, 1972.
pp. 391-430.

343.077 2 Alb

This article concentrates its comments and discussions on two areas of current developments in oil and gas law, namely, the attitude of Canadian courts to the interpretation of the freehold petroleum and natural gas lease and the applicability of the doctrine of estoppel to a terminated petroleum and natural gas lease. Various cases are cited and legislative developments are reviewed.

- C 114 "Soviet Capabilities in Arctic Marine Transport."
Terence Armstrong.
In MARINE TRANSPORTATION AND HIGH ARCTIC DEVELOPMENT:
POLICY FRAMEWORK AND PRIORITIES: SYMPOSIUM PROCEEDINGS,
MONTEBELLO, QUEBEC, MARCH 21-23, 1979.
s.l. : Canadian Arctic Resources Committee (CARC), 1979.
pp. 210-222.

330.971 9 Mar

This author uses the limited information available for the 1978 shipping season to construct a picture of Soviet Arctic marine activities. The administrative organization of the Ministry of the Merchant fleet is outlined and the Soviet ice-breaking fleet and other vessels are described. The efforts to extend the length of the shipping season are discussed as well as the pattern and estimated size of the Soviet Arctic marine operations. The author concludes by recommending Canadian study of some features of the Soviet experience in the area.

- C 115 STATEMENT OF POSITION REGARDING SELECTION OF PIPE FOR THE WHITEHORSE, YUKON TO CAROLINE, ALBERTA SEGMENT OF THE FOOTHILLS PIPELINE SYSTEM.
National Energy Board.
s.l. : s.n., n.d. various pag.

330.971 NEB - SP

Foothills Pipe Lines (Yukon) Ltd. (FPL(Y)) and its associated companies applied to the National Energy Board (NEB) for authority to construct a gas pipeline from the Alaska-Yukon border along the Alaska Highway through Whitehorse to Caroline, Alberta, where the pipeline would bifurcate into two smaller diameter lines running east and west. This report documents the NEB's examination of the economic and safety aspects of relative pipeline diameter, pounds per square inch pressure and pipeline wall thickness. The NEB indicates here that it intends to include, in its general approval of pipeline specifications, approval of 56 inch diameter, 0.54 inch wall thickness, grade 70 pipe, with a maximum allowable operating pressure of 1080 pounds per square inch for the portion of the pipeline system between Whitehorse and Caroline.

pp. 156-161.

333.823 05 Arc 1983

This study considers the technical feasibility of treatment and disposal methods for waste drilling fluids associated with offshore drilling. It is acknowledged that any methods used must be ecologically and economically acceptable. Two main types of treatment methods are discussed - firstly, integral treatment in which waste fluid is treated as a whole, making no distinction between solid and liquid phases and, secondly, differential treatment in which the solid phase is first separated from the liquid phase and the two fractions are then treated and disposed of separately.

PROCEEDINGS, CALGARY, ALBERTA, OCTOBER 28-31, 1986.
Calgary, Alberta : Arctic Offshore Technology Conference, 1986.
n.p.

665.502 8 Arc 1986

This paper reviews the early planning aspects of frontier projects that require very large amounts of money. The authors provide a practical guide and "road map" to evaluate the fiscal risk associated with venturing as a minority working interest owner. The intent is to avoid a situation where one party necessarily gives up its interest, because of a delay in getting a return on investment, thus causing financial strain for another party.

This illustrated brochure presents a history of hydrocarbon exploration and development in the Beaufort Sea. From the initial oil strike in 1919 at Norman Wells, to the present day operations of Canmar, the drilling technology, regulations, environmental and socio-economic aspects of northern energy development are discussed. The unique circumstances faced by operators in arctic conditions are addressed, including reference to ice and its impact on operations. A glossary of terms used in the drilling industry is provided.

SAFETY SESSION.
Calgary, Alberta : Arctic Offshore Technology Conference, 1986.
n.p.

665.502 8 Arc 1986

The concept and current state of development of a special-purpose underwater survival pod is described in this paper. The pod, which is in the very preliminary design stage, allows the crew of an offshore rig to ride out the most severe storm, or sudden emergency, in a safe environment below the surface of the ocean. The author explains that complete life support systems, communication and control are maintained throughout an emergency, for up to five days, and at any time the crew may elect to resurface for transfer to rescue vessels or otherwise operate on the surface.

- C 124 "Use of Ice Cutters to Provide Mobility in Ice for Arctic Offshore Drilling Structures."
Richard W. Slocum.
In ICE TECH '84. THIRD INTERNATIONAL CONFERENCE ON ICE-BREAKING AND RELATED TECHNOLOGIES [PROCEEDINGS], CALGARY, MAY 1984.
s.l. : Society of Naval Architects and Marine Engineers, 1984.
pp. N1-N9.

623.812 4 Int 1984

In an effort to reduce costs and increase the overall efficiency of drilling operations in the Beaufort Sea, there has been a move away from artificial islands to various mobile reusable structures. Because of their size, these structures can presently only be moved to new drilling locations during periods of open water or light ice. This paper discusses adding ice cutting systems to the drilling units and the benefits of doing so in terms of allowing year-round movement, even through thick ice, cost saving, and increased drilling capabilities. The paper is illustrated and a short list of references is provided.

- C 127 WESTERN ARCTIC MODERATE DRAFT HARBOUR.
Advisory Committee on Northern Development, Transportation
Committee Steering Group on Marine Transport.
s.l. : s.n., 1977. 71 pp.

627.2 ACND

This study examines sixteen possible sites between Herschel Island and Paulatuk, on the basis of operational acceptability, hydrography, meteorology, ice regime, and environmental impact relative to the requirements for, and the cost of, development of a moderate draft (20 feet) marine facility. (The study followed Canmar's request in 1975 that the federal government dredge the approach channel to Tuktoyaktuk harbour to accommodate Canmar's drilling fleet.) This study, by the Transportation Committee Steering Group on Marine Transport, recommends that such a harbour development not take place at the present time (1977) in view of the lack of interest by operators other than Canmar, the limited potential life of such a harbour, and other related reasons.

Vancouver, British Columbia : D.F. Dickins Associates, 1986.
pp. 805-819.

380.509 11 IPTC

Winter ice-breaking operations in the Bering, Chukchi and Beaufort Seas are reviewed in this paper. The power levels required by ice-breaking vessels are discussed and ice conditions are examined, with an emphasis on those conditions likely to confront ice-breakers in future operations in the north. Ice navigation skills and remotely sensed ice imagery are judged critical to safe and successful marine transportation in arctic conditions. The paper is illustrated and references are included.

TECHNOLOGY

- D 1 "Adfreeze Strength of Ice to Steel Pipe Piles as a Function of Temperature."
Michael L. Foster.
In COLD REGIONS ENGINEERING. PROCEEDINGS OF THE FOURTH INTERNATIONAL CONFERENCE, ANCHORAGE, ALASKA, FEBRUARY 24-26, 1986.
edited by William L. Ryan.
New York, New York : American Society of Civil Engineering, 1986.
pp. 11-20.
- 620.411 3 Col 1986

This paper argues that when designing a structure that will come into contact with ice, whether it be an offshore drilling platform or a pile placed in ice-rich permafrost, it is vital to consider the magnitude of the stresses resulting from the adfreeze bonding of the ice to the structure's surface. (Adfreezing refers to the process by which one object adheres to another by the binding action of ice.) This paper documents a study conducted to determine the adfreeze bond strength between steel pipe piles and freshwater ice as a function of temperature. This very technical presentation includes diagrams and a list of references.

OPERATORS' ASSOCIATION (APOA)).

Calgary, Alberta : Canadian Petroleum Association, 1983.

pp. 199-206.

333.823 05 Arc 1984

This paper first presents a brief overview of the federal government's
Arctic Marine Oilspill Program (AMOP). AMOP's role is to develop oil
spill countermeasures for ice-frequented waters. Most of the
remainder of the paper comprises a qualitative assessment of the
current state of oil spill research and counter measures in Canada, as
well as an indication of the ongoing major AMOP initiatives. The
author concludes this presentation by making personal
recommendations in regard to the future of oil spill research in
Canada.

D 4 APPLIED OFFSHORE STRUCTURAL ENGINEERING.

Teng H. Hsu.

Houston, Texas : Gulf Publishing Company, 1984. 204 pp.

627.9 Hsu

This book provides both theoretical background and practical design
data relative to offshore structural engineering. A review of
fundamental wind and wave forces is presented, followed by a study
of the practical design of offshore structures. Offshore installation is
examined and the concluding chapters describe the advanced
techniques of dynamic, seismic and fatigue analyses for offshore
structures. Many charts, curves and equations are included, the
book is indexed, and a short list of references appears at the end of
each chapter.

N.W. Krahl and V.M. Buslov.
In FOURTH INTERNATIONAL OFFSHORE MECHANICS AND ARCTIC ENGINEERING SYMPOSIUM: PROCEEDINGS, DALLAS, TEXAS, FEBRUARY 17-21, 1985. [Vol. II].
edited by Jin S. Chung et al.
New York, New York : American Society of Mechanical Engineers, 1985. pp. 114-119.

620.411 3 Off

This paper proposes a moveable offshore Arctic structure for exploration and/or production of hydrocarbons in water depths of 40 - 200 feet (12 to 60 metres) in the Beaufort Sea. In the proposed design, moving ice features primarily encounter the double cone middle structure between the foundation and the superstructure (this middle section consists of an inverted cone resting on an upright cone joined by a narrow neck of constant curvature). The authors explain that ice forces are minimized by the geometry of this proposed structure and, as well, are further minimized by the choice of cone angles and diameters. Illustrations are provided as well as a list of references.

Canada. Environmental Protection Service. Technology Development Report EPS 4-EC-83-3.
Ottawa, Ontario : Environment Canada, 1983. 257 pp.

628.168 33 O'N

This document was produced for the Environmental Protection Service, Environment Canada. The AMOP remote sensing project was undertaken to evaluate the capability of state-of-the-art sensors to detect oil in ice-infested waters. This report outlines the experiment plan for, and results obtained from, four remote sensing missions involving twelve difference sensors. Oil detection systems presently in use in Canada and abroad are examined. Recommendations are given for an integrated sensor package with a real-time display system. A bibliography is included and photographs and charts are used extensively throughout the study.

D 10 "Arctic Marine Technology: State of the Art and Prospects for the 1990s."

J.T. Stubbs and E. Makinen.
In INTERNATIONAL POLAR TRANSPORTATION CONFERENCE, VANCOUVER, B.C. 1986. [Vol. 1].
edited by Aileen Cassidy and David Dickins.
Vancouver, British Columbia : D.F. Dickins Associates, 1986.
pp. 220-242.

380.509 11 IPTC

The role of marine transportation in the development of commercial interests in the Arctic is identified in this paper. Technological advances made in design methods for ice-breaking vessels are examined here for the purpose of establishing the current state-of-the-art. Areas of technical development, where further research is suggested, are identified with a view to improving the competitiveness of the marine transportation component of Arctic ventures. Diagrams are included and a list of references is provided.

- D 11 "Arctic Offshore Drilling: A New Challenge."
Sherman B. Wetmore.
In HARSH ENVIRONMENT AND DEEPWATER HANDBOOK.
edited by Robert G. Burke.
Houston, Texas : Pennwell Publishing Company. Energy Group, 1985.
pp. 143-147.

622.182 82 Har 1985

The arctic offshore environment provides the drilling industry with a great challenge. Problems due to sea ice, high wind, extreme cold and poor bottom soil have required the design of special structures appropriate only for arctic offshore drilling. This article briefly describes the arctic environment and addresses the unique challenges it holds for the petroleum industry, as well as discussing some of the technological advances required to meet these challenges.

pp. B1-B12.

623.812 4 Int 1984

With the progress of Arctic exploration, year-round transportation of products has been extensively investigated. Ice-going tankers or LNG carriers are considered to be promising transportation candidates. In this paper, the influence of propulsion plant output on the conceptual design of ice-going ships is discussed. The paper examines aspects of model-ship correlation for estimating propulsion power, the effects of bow form on performance in ice, and also presents a statistical analysis based on recent knowledge of ice-breaking phenomena and accumulated data of operating ice-going ships. The paper is illustrated and a list of references is provided.

665.502 8 Arc 1986

Offshore islands and structures require protection from wave and ice erosion and this protection, traditionally, is provided by sandbags, concrete mats or quarried rock. This paper presents the results of a research program in which a new form of artificial armour stone, suitable for use in the offshore Arctic in the above application, has been investigated. The artificial stone is made of two ingredients - a sandy aggregate and non-marketable sulphur. Laboratory tests conducted are discussed in detail in this illustrated paper and a list of references is provided.

Washington, Dist. of Columbia : American Petroleum Institute, 1985. pp. 199-201.

628.168 33 Osc

This paper reports on laboratory and field tests which were conducted to evaluate the effectiveness of using surface collecting agents in cold weather oil recovery and in situ burning operations. In the tests, the surface areas and equilibrium thickness of crude oils were observed before and after application of different surface collecting agents to each oil. Ambient air temperatures were varied from 23°C to minus 17°C while the temperatures of the fresh water and laboratory prepared sea water were varied from 15°C to 0°C. The conduct of the experiments is described and the results presented in this paper. A short list of references is included.

"BAFFIN - A Dynamic Ship/Ice Interaction Model."

Claude G. Daley.

In ICE TECH '84. THIRD INTERNATIONAL CONFERENCE ON ICE-BREAKING AND RELATED TECHNOLOGIES [PROCEEDINGS], CALGARY, MAY 1984.

s.l. : Society of Naval Architects and Marine Engineers, 1984.
pp. F1-F8.

623.812 4 Int 1984

Ship-ice interaction is a complex process that is not yet well understood. Mathematical models serve to both develop and consolidate understanding of the problem. BAFFIN is a time domain simulation of the interaction which uses the normal modes of the ship and the ice to compute a solution. This paper describes the background and assumptions of the program and, through a presentation of results from a range of ship and ice conditions, discusses the essential aspects of ship/ice interaction.

- D 26 BUCKLING OF OFFSHORE STRUCTURES.
C.P. Ellinas, W.J. Supple and A.C. Walker.
Toronto, Ontario : Granada Technical Books, 1984. 472 pp.

620.416 2 EI1

Prepared for the United Kingdom Department of Energy, this book gives detailed critical comments on the design of a wide range of structural components, and on types of loading, related to the buckling of offshore structures. The authors present over 4000 test results which have been examined and collated to give a common basis for comparison, and the relevant international design codes are surveyed, comparing the relative accuracy of their predictions against the available test results. Structural elements are treated according to type and are then categorized with respect to loading. The material properties, stresses and imperfections peculiar to each structural element are considered and their effects on the buckling strength of the element are then discussed. This book contains a list of references, a subject index and an author index.

various pag.

665.502 8 Arc 1984

The Caisson Retained Island (CRI) is a platform for an exploratory drilling rig - a steel retaining structure is founded on a berm constructed of sand from the sea floor, the inner space is filled with dredged sand and on to the resulting surface is placed the drilling rig, camp and all necessary supplies. This paper follows the sequence of the caisson's operations from leaving its winter mooring, through initial set down, a winter drilling season, lift off and relocation at a new site. Design features of the CRI are highlighted and the author of this paper concludes that the CRI is an operational success.

- D 42 "Continuous Motion of a Ship in Ridged Ice."
Alfred L. Tunik.
In ICE TECH '84. THIRD INTERNATIONAL CONFERENCE ON
ICE-BREAKING AND RELATED TECHNOLOGIES [PROCEEDINGS],
CALGARY, MAY, 1984.
s.l. : Society of Naval Architects and Marine Engineers, 1984.
pp. M1-M9.

623.812 4 Int 1984

The continuous motion of a given ship in level ice can be considered, within an acceptable probability, as steady unless the ice thickness exceeds a certain value called the ultimate ice thickness. In ridged ice, however, the motion becomes unsteady, decelerating on the ridges and accelerating between them. This technical paper discusses the importance of keeping the non-stop motion of the ship. Conditions of the non-stop motion in ridged ice are the main focus of this presentation. Charts are included and a bibliography is provided.

edited by J. Brown, M.C. Metz and P. Hoekstra.
Hanover, New Hampshire : U.S. Army Cold Regions Research and
Engineering Laboratory, 1985. pp. 93-94.

551.384 Wor

This summary of a technical paper, presented at the subject workshop, discusses deep electromagnetic (EM) soundings that have been carried out in the Mackenzie Delta, N.W.T. The main purpose of the experiments was to develop a relatively inexpensive and environmentally acceptable geophysical technique for detecting horizontal layers at great depths, especially the contact between the ice-bonded permafrost and the underlying unfrozen sediments. The experiments are described and the results are briefly addressed.

The CBIR 1, which stands for Canmar Beaufort Island Rig no. 1, is designed for use drilling year round from the Tarsiut artificial island in the Beaufort Sea - particularly for drilling to depths around 7,620m. Previously, drilling from dredged artificial islands was limited to relatively shallow water depths. The author of this article discusses the design and construction of the CBIR 1 and then there follows the transcript of a question and answer session which took place at the subject conference.

D 49 "Design and Operation of Deepwater BOP Systems."

Harold Wardlaw.

In HARSH ENVIRONMENT AND DEEPWATER HANDBOOK.

edited by Robert G. Burke.

Houston, Texas : Pennwell Publishing Company. Energy Group, 1985. pp. 17-22.

622.182 82 Har 1985

Offshore blowout prevention (BOP) systems, in which high well pressures are encountered and the rig is operated in deep water, are analyzed in this article. Under these conditions, it is explained, the blowout preventers tend to close slowly against well back-pressures, especially when stripping is needed to return the pipe to the bottom. This article suggests ways to improve speeds against higher shut-in pressures.

Calgary, Alberta : Arctic Offshore Technology Conference, 1986.
16 pp.

662.502 8 Arc 1986

Icing is a major operational problem for offshore structures in locations where a combination of wind, temperature and atmospheric moisture conditions cause the formation of ice. Icing on topside surfaces poses a safety hazard on escape passages, helidecks, handrails and stairs; a 50mm ice buildup from seaspray icing on the bottom deck undersurface can weigh 200-300 tons and can seriously affect the stability of a rig. This paper discusses the concepts and practicalities of the design and operation of ice prevention systems on offshore drilling rigs and platforms and examines the major techniques considered and used in practice - mechanical, thermal and chemical. Diagrams and tables are included and there is a short list of references.

This paper presents the design and construction aspects of a modular, stackable, gravity drilling platform - the Glomar Beaufort I - for year-round use in the Alaskan Beaufort Sea. The use of this concrete island drilling system represents the first Arctic use of a completely self-contained mobile offshore drilling unit. The authors consider that this development represents a significant step towards more cost effective means of exploring near offshore Arctic areas for hydrocarbon production purposes. Diagrams and photographs are used extensively in this paper and references are included.

Development of hydrocarbon resources in Alaska has involved the design of nearshore and offshore facilities and structures, in the Beaufort Sea and Prudhoe Bay, in water depths ranging from eight to twelve feet. These developments and design criteria were based on studies aimed at satisfying the environmental conditions in the Arctic throughout their production service life. This paper addresses, in general, a number of studies conducted to establish design criteria for a proposed gravel island in Prudhoe Bay, Alaska. Illustrations supplement the text and a list of references is included.

This paper reviews the state-of-the-art in the geotechnical design of earthen and earth-supported structures affected by subsoil thawing. Analysis of the ground thermal regime during the thawing phase is summarized. The principal focus of the paper is a review of the prevailing methods for geotechnical design for subsoil thawing. Design approaches and examples are given for foundations, well casings, pipelines and other structures. Over 100 technical publications are listed in the appended bibliography.

In arctic regions, where economic and environmental considerations dictate that pipelines be located above ground, control of thermal expansion is a major design consideration. For cross-country pipelines, thermal expansion has been primarily controlled by the use of pipe anchors with expansion loops between them. This paper explores the latest development in above-ground waterflood pipe anchors currently being used on the Sohio operated portion of the Prudhoe Bay oil field. (Waterflooding is the technique of improving oil recovery from a reservoir by injecting water into the formation.) Illustrations supplement the text of this paper.

Current approaches and information concerning frost heave design for foundations, buried pipelines, artificial ground freezing, inground storage, and construction of pavements and other roadbeds are discussed in this paper. The authors discuss geotechnical considerations in the design of engineering structures necessary because of ground freezing, explaining that ground freezing may originate from naturally occurring seasonal frost or artificial freezing imposed by the operation of a structure. The damage to the structures usually arises from displacements - frost heave - initiated by the ice-water phase change in the soil. A list of references is appended.

- D 59 DESTRUCTION OF ICE ISLANDS BY EXPLOSIVES.
Malcolm Mellor and Austin Kovacs.
Calgary, Alberta : Arctic Petroleum Operators' Association, 1972.
1 microfiche.

MF APOA 36-1

The results of a study, entitled "Ice Island Destruction Project - Mackenzie Bay", are reported in this document. This project of the Arctic Petroleum Operators' Association (APOA) examines the practical feasibility of breaking up ice islands with explosives. Although the ice islands being dealt with here are considered relatively small (100 to 200 feet across and about 60 feet thick) they can have a mass of between 15,000 and 70,000 tons and, therefore, as they circulate, they can constitute a formidable threat to marine structures, including seabed installations such as pipelines. The study places heavy emphasis on the need for rapid and efficient shot-hole drilling, and the use of light weight equipment, since supplies and personnel would have to be carried to ice island locations by ordinary helicopter.

"Determination of Pipeline Trench Depths in the Beaufort Sea."

G.R. Pilkington and R.W. Marcellus.

In CONFERENCE ON CANADIAN OFFSHORE DRILLING AND DOWNHOLE TECHNOLOGY (CODD). [TEXTS OF PAPERS PRESENTED] EDMONTON, ALBERTA, SEPTEMBER 14-16, 1981.

s.l. : s.n., 1981. n.p.

622.182 82 CODD 1981

This paper discusses methods of determining pipeline trench depths for the southeastern Beaufort Sea. For shallow water (less than 20m) interpretation of seismic records is recommended as these records can indicate the deepest scour that has recurred over the past few thousand years. In deeper water, a method of combining ice keel and scour statistics is used. Pipeline depths of about 2m in shallow water, 4 to 6m in 20 to 40m of water, and no burial beyond 50m depths are indicated by the preliminary studies using these techniques.

333.823 05 Arc 1980

The authors of this paper state that an environmentally safe arctic tanker will consist of a combination of icebreaker and tanker technology. Past tanker oil spill incidents are reviewed (groundings, collisions, structural failures and explosions) as well as icebreaker features such as hull form and manoeuverability. Current technology of large tankers and icebreakers is examined in some detail, including specifications and plans. The authors conclude that the development of an environmentally safe arctic tanker is technically and economically feasible and that fast development of computer and remote sensing technology will make the operation of the tankers predictable and safe.

John J. Shepherd.
In FRONTIER OIL AND GAS DEVELOPMENT: THE DECADE AHEAD PROCEEDINGS OF THE TENTH ENVIRONMENTAL WORKSHOP, MONTEBELLO, QUEBEC, APRIL 18 - MAY 1, 1981.
edited by Claudette Reed Upton.
The Arctic Petroleum Operators' Association (APOA) et al.
Calgary, Alberta : Arctic Institute of North America, University of Calgary, 1981. pp. 99-104.

333.823 15 Fro

This paper presents a service industry view of Canadian content in frontier development technology. The view is expressed that operators in frontier developments do not change to new, and in this case Canadian, suppliers and/or technology because of a perceived risk. Rather, foreign suppliers who have served the Gulf of Mexico and North Sea markets are used in many cases, and this causes frustration among Canadian manufacturers and suppliers trying to enter the market. A review of current purchasing trends, which show some recognition of the potential benefits to the Canadian economy, and of the range of Canadian technology available to the industry, concludes this presentation.

Washington, Dist. of Columbia : American Petroleum Institute, 1981. pp. 183-189.

628.168 33 Osc 1981

The main cleanup of an oil spill originating from a late-season oil well blowout in the Beaufort Sea would take place in the spring, since it is then that the oil trapped in and under the ice would surface to accumulate in melt pools on top of the ice. Dome Petroleum undertook a major oil spill experiment during the winter of 1979/80 in the Beaufort Sea, to determine the efficiency of burning as a countermeasure and to optimize burning techniques for oil and gas released from a Beaufort Sea blowout under ice. This paper describes the design of the experiments and provides very detailed illustrations to supplement the text. The summary of preliminary results is presented in tabular format.

D 73 EFFECTIVENESS OF THE REPEAT APPLICATION OF CHEMICAL DISPERSANTS IN OIL.

Randy Belore.

Environmental Studies Revolving Funds Report No. 006.

Ottawa, Ontario : S.L. Ross Environmental Research Ltd., 1985.

66 pp.

628.168 33 Bel

The primary objective of this study is to determine if changes in oil properties or chemical imbalances, caused by an initial application of dispersant, would reduce the effectiveness of a second application of dispersant. The results show that both the quantity of oil dispersed and the size distribution of the oil drops generated by the second application were similar to, or better than, those from the initial application of dispersant. The author concludes, therefore, that the second or repeat application is as effective as the first, at least under the test conditions present in the study.

D 75 EFFICIENCY AND RETENTIVITY TESTING AND PERFORMANCE OF SINKING AGENTS IN THE REMOVAL OF OIL SPILLS.

James G. Dick and Anatol Feldman.

Canada. Environmental Protection Service. Economic and Technical Review Report EPS 3-EC-75-1.

Ottawa, Ontario : Canada. Environmental Protection Service, 1975. 59 pp.

628.168 33 Dic

One method for the removal of oil spills on water involves the application of a sinking agent to the surface of the oil spill and the subsequent sinking of the spill. This report contains techniques for the testing of sinking agents to determine their efficiency in the removal of oil and their ability to retain oil once removed by the action of sinking. As well, this report provides information concerning the effects of the following: oil layer thickness initially; free fall distance for the sinking agent; temperature and oil type on the efficiency of removal and on the retentivity. A comprehensive list of references is included.

Shawn D. Gill.
In OIL SPILL CHEMICAL DISPERSANTS: A SYMPOSIUM SPONSORED
BY ASTM, WEST PALM BEACH, FLORIDA, OCTOBER 12-13, 1982:
ASTM SPECIAL TECHNICAL PUBLICATION 840.
Philadelphia, Pennsylvania : American Society for Testing and
Materials, 1984. pp. 161-165.

628.168 33 ASTM

The Canadian Offshore Aerial Applications Task Force (COAATF) was convened in 1979 to conduct laboratory and field studies in the practical effectiveness of the aerial application of oil spill dispersants under Canadian environmental conditions. Several studies undertaken by the COAATF are briefly reviewed in this paper, relative to their contribution towards this objective.

Philadelphia, Pennsylvania : American Society for Testing and
Materials, 1984. pp. 324-337.

628.168 33 ASTM

This paper discusses field experiments which were conducted on Arctic beaches to assess the effectiveness of dispersants in the cleanup of stranded oil. The potential for biological damage that can be incurred from the dispersed oil, the oil/dispersant combination, or from the dispersant itself is touched on but only the effectiveness of the dispersants in the removal of oil is studied in depth. The authors believe the results of their experiments are applicable to non-arctic environments since the primary factor that affected dispersant efficiency (wave energy) is a common element in all coastal environments.

D 81 EXPERIMENTS WITH SCALE MODELS OF OIL COLLECTORS FOR SUBSEA WELL BLOWOUTS, PART 2.

Jerome H. Milgram, Christopher J. Von Alt and James J. Burgess.
Calgary, Alberta : Canadian Offshore Oil Spill Research Association, 1982. 36 pp.

628.168 33 Mil

This paper describes laboratory experiments and intermediate scale experiments on the collection of oil by an open bottom collector, above a blowout, with a marine riser above the collector. The results are analyzed and the identification of two scale-dependent parameters, and their effects on the experiments, are noted. The paper includes tables, diagrams and graphs.

D 82 FEASIBILITY OF SURFACE DETECTION OF OIL UNDER ICE.

R. Gill.

Canada. Environmental Protection Service. Economic and Technical Review Report EPS 3-EC-79-11.

Ottawa, Ontario : Canada. Environmental Protection Service, 1979. 40 pp.

628.168 33 Gil

In this study a number of detection methods are addressed to determine the feasibility of their application to the detection of oil in and under ice. These methods include radio frequency, acoustic, optical, nuclear and the gas sniffer. The study includes a discussion of various features of oil/ice interaction and ice thickness as it impacts on oil detection. Tables and charts are included and there is a list of references. The study was funded by the Arctic Marine Oilspill Project (AMOP).

Intera Environmental Consultants Ltd.
[Calgary, Alberta] : Intera Environmental Consultants Ltd., 1975.
n.p.

330.971 AHPI Ex. 24

This technical report presents an evaluation of the feasibility of using remote sensing techniques to monitor environmental change near Arctic pipelines and associated facilities. Prepared for Foothills Pipe Lines Ltd. (FPL), the report defines the environmental parameters, influenced by pipeline construction and operation, that can be sensed remotely and describes the means whereby these parameters would be sensed, including sensor used, method of application and cost. Numerous illustrations are included and there is a short bibliography.

- D 84 FIELD EVALUATION OF SEVEN OIL SPILL RECOVERY DEVICES.
L.B. Solsberg et al.
Canada. Environmental Protection Service. Technology Development Report EPS-4-EC-76-3.
Ottawa, Ontario : Canada. Environmental Protection Service, 1976.
81 pp.

628.168 33 Sols

This report documents a series of test programs in which seven mechanical oil skimmers were evaluated on the basis of four parameters: 1) oil recovery rate - the rate at which the device recovers oil; 2) oil recovery factor - the volume of oil recovered versus the volume presented to it; 3) oil content factor - the percentage of oil in the liquid recovered by the device; and 4) the emulsification factor - the percentage of water in the oil recovered by the device. As well as presenting the evaluations, the authors describe the test conditions and discuss the design of the skimmers, including suggestions for improvements in some design features.

- D 85 FINAL REPORT ON ARCTIC TANKER RISK ANALYSIS.
F.G. Bercha and Associates Limited.
Beaufort EIS Support Document 1982.
Calgary, Alberta : F.G. Bercha and Associates Limited, 1981.
various pag.

623.824 5 Ber

Prepared for Dome Petroleum Limited, this volume documents a risk analysis of the proposed plan to transport crude oil from the Beaufort Sea to southern Canada, over four alternative routes, by specially designed double-hulled ice-breaking tankers. The risk analysis is based on conventional tanker accident statistics, accident case studies, and Arctic tanker design information. In addition to the overall spill risk comparison, which shows the arctic tanker to operate with 120 to 160 times less risk than the conventional tanker, sensitivity analysis methods are applied to evaluate the risk reduction attributable to each of the Arctic tanker's design features. The greatest benefits result from the Arctic tanker's strengthened double hull, segregated ballast construction, and tank inerting system.

In SECOND ARCTIC OFFSHORE SYMPOSIUM [TECHNICAL BRIEFS],
HOUSTON, TEXAS, APRIL 11, 1984.
Newport Beach, California : Global Marine Development Inc., 1984.
21 pp.

627.98 Arc 1984

This paper describes the development and application of high-strength lightweight concrete in the construction of the concrete island drilling system (CIDS). Design requirements are discussed, including the need for a concrete with a low unit weight to minimize draft during towing, high-strength for structural resistance, and entrained air for long-term freeze-thaw resistance. The design and testing program conducted to meet these requirements is also discussed. The paper is illustrated and a short list of references is included.

D 87 "Floating Fuel Production Facility for the Beaufort Sea."

R.B. Barnes.

In CONFERENCE ON CANADIAN OFFSHORE DRILLING AND DOWNHOLE TECHNOLOGY (CODD). [TEXTS OF PAPERS PRESENTED] EDMONTON, ALBERTA, SEPTEMBER 12-14, 1983.

Calgary, Alberta : s.n., 1983. n.p.

622.182 82 CODD 1983

After overviewing Dome's Beaufort Sea exploration activities, this author documents a study performed to determine the feasibility of delivering a floating fuel production facility to provide a local fuel source for industry exploration needs in the Beaufort Sea and, potentially, community fuel needs at a later time. The concept involves mounting a diesel fuel production facility on a converted existing tanker. Environmental protection and ice surveillance measures are described and the status of the project is reported showing that conceptual engineering is complete and all systems are configured and costed in detail.

edited by Richard L. Berg and Edmund A. Wright.

Technical Council on Cold Regions Engineering Monograph.

New York, New York : American Society of Civil Engineers, 1984.
145 pp.

624.151 36 Berg

This volume contains four articles on current geotechnological engineering in terms of construction and operation in the presence of frost heave conditions and freeze-thaw cycles. Each article is accompanied by a bibliography. Subject and author indices are provided.

technology / frost heaving / thawing / soil temperature / ground temperature / geotechnology / road construction / pipeline design / oil well design / engineering / steel structures / oil rigs / ground thermal regime

- D 90 FROST HEAVE CONSIDERATIONS FOR THE ALASKA HIGHWAY GAS PIPELINE PROJECT: FROST HEAVE PROGRAM DESCRIPTIONS AND NORTHERN PIPELINE AGENCY POSITION PAPERS.

Foothills Pipe Lines (Yukon) Ltd. and Northern Pipeline Agency.

s.l. : s.n., 1979-80. n.p..

551.38 Fro

When a chilled pipeline crosses areas of unfrozen soil the potential for frost heave exists if a source of water is available and if the soil is susceptible to the growth of ice lenses. Foothills Pipelines (Yukon) Ltd.'s (FPL(Y)) ten component frost heave design program, relative to the Alaska Highway Gas Pipeline project (AHGP), is described in this volume. In addition, the Northern Pipeline Agency position papers on this frost heave design program are included. These position papers re-state the design objectives of the frost heave program and review the mitigative design modes considered by FPL(Y). Recommendations for dealing with weaknesses in the program are made and alternative design modes are proposed for consideration.

FPL(Y) / AHGP / Northern Pipeline Agency / pipeline design / frost heaving / soil temperature / ice, ground / pipeline construction

D 91 FROZEN GROUND ENGINEERING.

Arvind Phukan.

Englewood Cliffs, New Jersey : Prentice-Hall Inc., 1985. 336 pp.

624.150 911 Phu

The purpose of this text is to present the state-of-the-art in frozen ground engineering suitable for instruction at the university graduate level and for practising engineers specializing in Arctic engineering. The main topics discussed in the book include the engineering behavior of frozen soil materials, design concepts, analyses of foundations for different structures and field investigation techniques in frozen ground. Illustrations and tables are included and provide information useful for design and construction. The appendices include a list of references, a glossary and an index.

D 92 "Future Ice-Breaker Design."

B.M. Johansson and C.R. Revill.

In INTERNATIONAL POLAR TRANSPORTATION CONFERENCE, VANCOUVER, B.C. 1986. [Vol. 1].

edited by Aileen Cassidy and David Dickins.

Vancouver, British Columbia : D.F. Dickins Associates, 1986. pp. 169-200.

380.509 11 IPTC

The authors of this paper believe that the design of a future commercial ice-breaker, for service in the Canadian Arctic, should recognize the requirements inherent in the ongoing hydrocarbon development of the Arctic. Such a vessel should be capable of operating on a year-round basis and be self-sufficient with minimum reliance on outside facilities. This technical paper discusses the design features and operational requirements of ice-breaking vessels for use in the Arctic. There are many illustrations included and a list of references is provided.

D 93 "Geology of Deep Water, Arctic Poses Challenges."

Jim Redden.

In HARSH ENVIRONMENT AND DEEPWATER HANDBOOK.

edited by Robert G. Burke.

Houston, Texas : Pennwell Publishing Company. Energy Group, 1985.
pp. 5-15.

622.182 82 Har 1985

In this article, the technology required to explore the oil and gas resources in deep water and arctic conditions is examined. The need for less expensive designs for mobile offshore rigs capable of working the deep water, and in the Arctic, is identified along with other technological challenges facing industry. The two distinct environments - the Arctic and deep water - are considered. Regions studied include the Atlantic Ocean, Gulf of Mexico and the Pacific Ocean in addition to the Beaufort, Chukchi and North Seas and the Arctic Ocean. As well, the potential reserves of oil and gas under the seabeds of the deep waters of the world are discussed.

D 97 "A Highly Mobile Rig for the North Slope of Alaska."

David Mochizuki.

In CONFERENCE ON CANADIAN OFFSHORE DRILLING AND
DOWNHOLE TECHNOLOGY (CODD). [TEXTS OF PAPERS PRESENTED]
EDMONTON, ALBERTA, SEPTEMBER 14-16, 1981.

s.l. : s.n., 1981. n.p.

622.182 82 CODD 1981

This speaker describes the development and transportation of a mobile rig (Rig 26-E) for the North Slope of Alaska. The North Slope of Alaska is the area of the Brooks Range stretching northward to the Arctic Ocean. The author reports that the rig is in service, for Sohio, at Prudhoe Bay, a flat arctic "desert" approximately 250 miles north of the Arctic Circle on the Beaufort Sea coast. Design considerations and construction are discussed in some detail and illustrations of the rig are included.

D 98 "Ice Interactions with Structures: Recent Developments and Future Trends."

K.R. Croasdale.

In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION
PROCEEDINGS, CALGARY, ALBERTA, NOVEMBER 6-9, 1984.

Calgary, Alberta : Arctic Offshore Technology Conference, 1984.
various pag.

665.502 8 Arc 1984

Theories for ice-structure interaction under Arctic conditions, particularly in the Beaufort Sea, are examined in this paper. The distinction between exploration and production structures is emphasized in terms of typical ice design scenarios and accompanying ice management schemes. Major differences in ice interaction cases between structures in landfast ice areas and those in the polar pack are also documented. The data presented arise from experience with real structures as well as major field experiments.

- D 99 "Ice Related Research and Development Leading to the Design of Esso's Caisson Retained Island."
S.G. Stevens and K.N. Wood.
In CONFERENCE ON CANADIAN OFFSHORE DRILLING AND DOWNHOLE TECHNOLOGY (CODD). [TEXTS OF PAPERS PRESENTED] EDMONTON, ALBERTA, SEPTEMBER 12-14, 1983.
Calgary, Alberta : s.n., 1983. 11 pp.

622.182 82 CODD 1983

The design of Esso's caisson retained island, which was conceived in 1975 as a means of reducing the quantity of fill required to build artificial islands in the Beaufort Sea, is the result of theoretical and experimental analyses performed over several years. This paper commences with a summary of the overall design procedure. Selected ice phenomena are discussed to demonstrate the diverse means by which theory and experiment can interact and culminate in design criteria. Illustrations are provided and there is a list of references.

- D 102 "Icesemi-Computer Software to Analyze Ice Interaction with Semi-Submersibles."
Norman F.B. Allyn and J.S.Q. Tseng.
In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION PROCEEDINGS, CALGARY, ALBERTA, OCTOBER 28-31, 1986.
Calgary, Alberta : Arctic Offshore Technology Conference, 1986.
4 pp.

665.502 8 Arc 1986

As activity proceeds in sub-arctic or marginal ice areas, the potential exists to extend the use of conventional semi-submersible drilling or production rigs to year-round use rather than just open-water operations. The assessment of the ability of a moored semi-submersible to remain on station and resist forces from various ice conditions has relied in the main on basic calculations and model testing. This paper discusses a computer software package called "Icesemi" which analyzes ice interaction with semi-submersibles.

- D 103 "The Importance of Contingency Measures in Determining Outer Continental Shelf Oil and Gas Development."
Raymond R. Emerson.
In OIL SPILL CONFERENCE; PREVENTION, BEHAVIOR, CONTROL, CLEANUP: PROCEEDINGS. ATLANTA, GEORGIA, MARCH 2-5, 1981.
American Petroleum Institute, U.S. Environmental Protection Agency and U.S. Coast Guard.
Washington, Dist. of Columbia : American Petroleum Institute, 1981.
pp. 571-575.

628.168 33 Osc 1981

Oil spills are one of the major concerns associated with oil and gas development along the Outer Continental Shelf (OCS). The U.S. government plans lease sales at the rate of seven per year and this paper discusses the selection of a leasing plan that offers the maximum production potential within an acceptable level of environmental risk. The author describes a model which couples local meteorology and physical oceanography to produce trajectories of hypothetical oil spills. These trajectories are then used to establish overall probabilities of an oil spill contacting specific coastal areas and habitats.

- D 114 THE MECHANICS OF FROZEN GROUND.
N.A. Tsytovich.
Toronto, Ontario : McGraw Hill Book Company, 1975. 426 pp.

624.150 911 Tsy

Translated from the Russian, this book sets forth the basic laws established by the author - a USSR scientist and engineer - for frozen soil mechanics as a science. As well, a number of solutions obtained for problems in the mechanics of frozen ground are presented and the practical application of the theories is discussed. Particular attention is given to the stability of permafrost soils and to bases and foundations on permafrost soils whose frozen state is retained or intensified. This book is indexed and each of the nine main sections includes a list of references in addition to the general comprehensive bibliography provided.

- D 115 METHODS FOR THE FRACTURING OF ICEBERGS.
P.H. Gammon and J.C. Lewis.
Environmental Studies Revolving Funds Report No. 011.
Ottawa, Ontario : Environmental Studies Revolving Funds, 1985.
91 pp.

620.411 3 Gam

Funded by the Environmental Studies Revolving Funds (ESRF), this study investigates one aspect of the general problem of iceberg management in support of the development of offshore hydrocarbon resources. Specifically, the problem of iceberg size reduction, through iceberg fracturing, is addressed and the authors suggest that the method of cutting an iceberg with an electrically heated small diameter tube is the most practical approach to iceberg fracturing. There is some discussion of other methods for inducing the large-scale fracturing of icebergs, including explosives, thermal fracture of ice, and various types of directed beams (radiation, fluid or particles). This technical study includes diagrams and a list of references.

- D 117 "Mobile Arctic Drilling Structure (MADS).
S.B. Wetmore.
In SECOND ARCTIC OFFSHORE SYMPOSIUM [TECHNICAL BRIEFS],
HOUSTON, TEXAS, APRIL 11, 1984.
Newport Beach, California : Global Marine Development Inc., 1984.
25 pp.

627.98 Arc 1984

The mobile Arctic drilling structure is a sloping-sided, steel gravity structure which is capable of operating in water depths from 15 to 40 feet. This paper outlines the basic design features of the structure and also presents an overview of recent design modifications and changes in ice load analyses and logistical capacity. The text is supplemented by illustrations and a short list of references is provided.

various pag.

665.502 8 Arc 1984

The design bases, technical merit and economic advantages of Bow Arctic Resources' Mobile Arctic Island (MAI), as a drilling and production structure, are discussed in this paper. The MAI concept centers on the ability of a converted tanker to cope, as a bottom founded structure, with environmental conditions of the Beaufort Sea. The tanker is cut in half laterally and the two halves are welded together side-by-side; the MAI screeds itself onto a sand mattress or berm and is set down by taking on ballast water.

665.502 8 Arc 1984

The actual text of this address is not reproduced. Instead, paper copies of a slide presentation are included. The content addresses the Canadian government's requirement for same season relief well drilling by Beaufort Sea operators. The intent of this requirement is to ensure that, in the event of a blowout, it must be possible to commence and complete a relief well in that same season. The environmental conditions in the Beaufort Sea are described briefly along with the exploratory drilling systems which have been utilized to date. The new approach to relief well drilling refers to BeauDril's Kulluk system, capable of providing year-round relief well drilling, which is described in considerable detail in this presentation.

D 126 NOVEL COUNTERMEASURES FOR AN ARCTIC OFFSHORE WELL BLOWOUT.

R. Abdelnour et al.

Canada. Environmental Protection Service: Economic and Technical Review Report EPS-3-EC-77-14.

Ottawa, Ontario : Canada. Environmental Protection Service, 1977. 135 pp.

628.168 33 Abd

The problems of cleaning up oil spilled by an offshore well blow-out in the Arctic are reviewed in this technical report. In situ burning is recommended here as the most promising disposal technique and various methods are proposed for holding the oil in a burnable layer. This study reviews the conditions to be expected at the site of an Arctic well blowout, and shows that the techniques and equipment employed in cleaning up temperate region oil spills are largely inapplicable in the Arctic environment. Recommendations for further study are made and a lengthy bibliography is provided.

S.W. Laut and M.T. Bradshaw.
In FOURTH INTERNATIONAL OFFSHORE MECHANICS AND ARCTIC ENGINEERING SYMPOSIUM: PROCEEDINGS, DALLAS, TEXAS, FEBRUARY 17-21, 1985. [Vol. II].
edited by Jin S. Chung et al.
New York, New York : American Society of Mechanical Engineers, 1985. pp. 47-51.

620.411 3 Off

Offshore production wells placed through permafrost are subjected to lateral soil forces when production of hot oil thaws the surrounding permafrost. Previous research indicates lateral soil movements in the Canadian Beaufort Sea to be large enough to cause several bending strains in the well casing, if the well casing moves with the soil. This paper discusses a testing program to determine bending strains and the effect of varying soil properties and well casing rigidity. Results are presented which show well casing strains to be lower than first predicted as the well casing does not move exactly with the soil.

628.168 33 Log

The findings of the Environmental Protection Service's portion of the Beaufort Sea Project (oil spill countermeasures) are presented here in two volumes. Technical Report 31a contains the summary information and Report 31b, which is an appendix to 31a, contains the details of the information. The feasibilities of controlling and cleaning up an oil spill in the Beaufort Sea, as the result of an exploratory well blowout, are discussed. Particular emphasis is placed on large spills. It is the consensus of the authors, after a review of technology, that the development of satisfactory countermeasures for oil spills in the Arctic require a large-scale technological effort. This study is viewed as a first step; it analyses the current state of knowledge and technology and identifies gaps where research is required.

A method by which in situ measurements of ice floes were made, during the collision of multi-year ice floes with Hans Island, is described in this short technical paper. It is explained that hydrocarbon production in the Beaufort Sea requires oil rigs, and other stationary marine structures, to be able to withstand the forces exerted by extremely large features, such as multi-year floes exceeding 10km in diameter and 8m in thickness. The information gathered by Dome Petroleum personnel, from the Hans Island collision, will be applied in the design and construction of marine structures.

PROCEEDINGS, CALGARY, ALBERTA, NOVEMBER 6-9, 1984.
Calgary, Alberta : Arctic Offshore Technology Conference, 1984.
various pag.

665.502 8 Arc 1984

The authors of this paper explain that in the development of offshore vessels, for use by Canmar in the Beaufort Sea, the normal procedure of designing, testing and then operating was, in essence, reversed. Rather, it is reported, conventional vessels were initially sent out to operate in new areas, with very different from usual ice conditions, and operational experience and damage information was gathered. Test programs were then designed and this paper deals with that process in terms of ship safety, survivability and reliability.

622.182 82 Har 1985

This article examines the high cost of exploratory drilling for oil and gas, in arctic and other harsh environments, which increases proportionally with depth, ice movement and distance from supply bases. The cost of development, production and transportation, and the difficulty of competing with production from traditional producing areas, is addressed. The environmental conditions, which dictate the method selected for exploration and production purposes, are examined and the technology developed to cope with the problems facing operators in hostile environments is discussed and illustrated. The theme of the article is the need for less expensive and more advanced recovery technology.

622.182 82 CODD 1983

The presence of significant permafrost zones in the Arctic presents unique problems in the development of hydrocarbon resources in the area. Heat dissipated into permafrost zones by drilling and production operations will result in permafrost thaw subsidence which could potentially damage the safety integrity of the surface casings. This paper describes the design, testing, installation and operation of an electronic casing instrumentation system to monitor this potential problem. The system was installed in 1981 on the Gulf/Dome Tarsiut artificial island and currently provides downhole casing data.

- D 150 REDUCING THE UNCERTAINTIES ABOUT PRODUCING OIL AND GAS IN THE ALASKAN ARCTIC.
Morgantown Energy Technology Center.
U.S. Department of Energy: Morgantown Energy Technology Center.
Topical Report. Arctic and Offshore Research Subprogram.
Morgantown, West Virginia : U.S. Department of Energy: Morgantown Energy Technology Center, 1983. 33 pp.

622.182 82 METC

This overview report of the U.S. government's Arctic and Offshore Research Subprogram describes arctic and offshore technologies and the government's role in developing technology. Project plans designed to advance the arctic technology base and accelerate the development, production and transportation of Alaskan oil and gas resources, are discussed. The arctic environment is described and research needs in the area of technology are identified.

B. Michel.
In FOURTH INTERNATIONAL OFFSHORE MECHANICS AND ARCTIC ENGINEERING SYMPOSIUM: PROCEEDINGS, DALLAS, TEXAS, FEBRUARY 17-21, 1985. [Vol. II].
edited by Jin S. Chung et al.
New York, New York : American Society of Mechanical Engineers, 1985. pp. 281-285.

620.411 3 Off

This paper presents an economical and resistant way to build a base of fill material for the artificial islands and caissons that are used for offshore structures in the Arctic. The authors describe a method for producing built-up and reinforced sea ice plates that are assembled to form a solid and strong base to replace the fill material of underwater berms. Illustrations show examples of the use of the ice berm for both movable and permanent structures.

In the event of an oil spill in Arctic waters, oil may be trapped under ice for a period of time and the tracking of the oil during this time may be accomplished by following the movements of the ice under which the oil is located. This report reviews various techniques by which ice movements may be remotely monitored or determined. The techniques are divided into two regimes: "macro" systems for tracking ice over great distances and "micro" systems using short-range homing systems for the accurate location of specific sites. On the basis of this review, recommendations are made on the configurations of equipment for each system. This report is illustrated and a short bibliography is included.

This report describes the use and effectiveness of combustion promoters as applied to in situ burning of oil slicks. The materials described are classified into four groups in accordance with their effects upon the oil layer. Some of the materials originally classified as sorbents have been listed here as combustion promoters; each of these can be air-dropped on to oil slicks if necessary. It is reported that present data are insufficient for thorough conclusions to be drawn and it is recommended that further controlled tests, as well as tests on additional materials, be performed. A list of references cited in the report and a short bibliography are provided.

Philadelphia, Pennsylvania : American Society for Testing and Materials, 1984. pp. 87-93.

628.168 33 ASTM

The effectiveness of a particular chemical dispersant is usually determined by various laboratory tests. Such laboratory performance cannot always be replicated in the field. The physical and chemical aspects of the spilled oil influence dispersant performance. Some of the important parameters discussed in this paper are the geometry, viscosity and lens effect of the oil slick and the type of crude oil. The composition of the crude oil, and its emulsion-forming tendency, influence dispersant effectiveness regardless of other physical properties and that influence is extensively discussed in this paper.

Keith Philpott Consulting Ltd.
Environmental Studies Revolving Funds Report No. 017.
Ottawa, Ontario : Keith Philpott Consulting Ltd., 1986. various pag.
627.98 Kei

This Environmental Studies Revolving Funds (ESRF) Study outlines and assesses the general state of knowledge and experience of scour around seafloor structures. (For the purposes of this study, scour is defined as erosion caused by modification of water movement due to the presence of a natural obstacle or man-made structure.) A literature search was conducted and a list of selected references is included. As well, the study identifies successful structure design procedures, and outlines design guidelines, data requirements and procedures for selecting effective scour prevention measures.

First published in French in 1976, this book has been translated into English and updated to include recent developments in offshore technology. The author examines the elementary definitions and concepts of soil mechanics and looks at aspects of seismic exploration. The principles, description, implementation, performance and application limits of soil reconnaissance techniques are given. Examples of geotechnical problems involved in the offshore installation of structures used for petroleum exploration and production are provided. Diagrams and charts are used throughout and each chapter contains a bibliography.

- D 165 "Shallow Geophysical Borehole Logging in Permafrost: A Case History."
R. Miller.
In WORKSHOP ON PERMAFROST GEOPHYSICS, GOLDEN, COLORADO, 23-24 OCTOBER 1984.
edited by J. Brown, M.C. Metz and P. Hoekstra.
Hanover, New Hampshire : U.S. Army Cold Regions Research and Engineering Laboratory, 1985. pp. 51-52.

551.384 Wor

The construction of the TransAlaska Pipeline System (TAPS) involved the placement of approximately 77,000 vertical support members for the elevated portion of the hot oil pipeline. While the average length of each was calculated to be 30 feet, the actual length was to be dependent on the dry density of the permafrost soils. This technical paper documents the development of a geophysical tool capable of rapid determination of dry density for use by field engineers conducting sample logging of all the holes drilled.

- D 167 "Shock Waves Show Ice-Breaking Promise."
Richard H. Wesley and William R. Stowell.
In HARSH ENVIRONMENT AND DEEPWATER HANDBOOK.
edited by Robert G. Burke.
Houston, Texas : Pennwell Publishing Company. Energy Group, 1985.
pp. 112-115.

622.182 82 Har 1985

The main problem encountered in offshore operations is ice. This paper describes technology which utilizes the characteristics of the shock wave to fracture ice. The method involves an extremely intense shock wave developed by means of an electrical discharge, similar in nature to a lightning bolt. Conceptual sketches depict how pack ice can be fractured using this method to allow passage of marine vessels, and how an offshore structure, fixed or mobile, can be protected by fracturing approaching ice to the point that the remaining fragments will cause no damage if contact is made.

- D 168 "Some Aspects of Interpreting Seismic Data for Information on Shallow
Subsea Permafrost."
K.G. Neave and P.V. Sellmann.
In WORKSHOP ON PERMAFROST GEOPHYSICS, GOLDEN, COLORADO,
23-24 OCTOBER 1984.
edited by J. Brown, M.C. Metz and P. Hoekatra.
Hanover, New Hampshire : U.S. Army Cold Regions Research and
Engineering Laboratory, 1985. pp. 61-65.

551.384 Wor

The authors of this paper identify three problems associated with finding the extent of warmer subsea permafrost using oil industry seismic records: 1) the boundary between warmer and colder permafrost is not sharp and there are strong contrasts in seismic velocity; 2) shallow gas shifts the velocity ranges for both thawed and bonded sediments; and 3) the signal-to-noise ratios are poor on the records, partly because of reduction in intensity of the signal due to the shallow gas. Methods of overcoming these problems are discussed in this illustrated paper. A list of references is provided.

Peter Blakesley.
In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION PROCEEDINGS, CALGARY, ALBERTA, NOVEMBER 6-9, 1984.
Calgary, Alberta : Arctic Offshore Technology Conference, 1984.
various pag.

665.502 8 Arc 1984

The authors of this paper review previously reported data relative to conventional steel plate and corrosion susceptibility peculiar to Arctic waters. As well, they report their own preliminary findings from controlled tests of weldments made at sub-zero temperatures in special micro-alloyed low carbon on-line accelerated cooled plate. The significance of electrode chemistry and heat input is considered, as are fracture mechanics, and the degree of tolerable knifeline corrosion. The author discusses the manner in which findings and experiments might influence techniques of weld repairs in sub-zero conditions, on existing structures, in the Arctic regions. A bibliography completes this paper.

edited by Jin S. Chung et al.
New York, New York : American Society of Mechanical Engineers, 1985. pp. 321-329.

620.411 3 Off

Ice-breaking technology has been improved over the last ten to 15 years so that the installed power of ice-breaking ships could be drastically reduced. In this paper, the improvement is demonstrated by reference to four examples of ice-breaking vessels. It is suggested that the ice-breaking capability of ships be evaluated through model tests, theoretical approach and by full scale measurements. In concluding, the author offers some thoughts on features of an advanced ice-breaker.

The principal purpose of this study is to identify the petroleum technology that may be used to develop offshore oil resources in the deepwater sub-arctic areas in and around the Gulf of Alaska. This study focuses on the development of components to be utilized, including methods of exploration, production and transportation. A technical and economic assessment of these components, in conjunction with the relevant environmental and operational parameters, defines the feasible strategies that might be employed. In effect, this study provides a technology assessment with associated component costs and schedules for water depths beyond 200 metres.

D 182 SUPPLEMENT TO "MODEL TESTS OF THE IMPERIAL MONOPOD DRILLING UNIT".
Earl and Wright, Consulting Engineers.
Offshore Technology Report No. OTC-73-40.
Calgary, Alberta : Arctic Petroleum Operators' Association, 1973.
1 microfiche.

MF APOA 110-10

This short, very technical report, summarizes motions and accelerations tests, and lowering and raising tests, conducted on Imperial Oil's monopod drilling unit. During the tests, motions and accelerations were measured in a series of regular and irregular wave heights and durations. The second series of tests involved lowering a model of the drilling unit, through ballasting, and raising it by deballasting the tanks from the bow to the stern. The technical information is supported by illustrative charts.

s.l. : s.n., 1981. n.p.

622.182 82 CODD 1983

This article briefly discusses the need for, and the methodology of, drillsite survey, the general site survey program and the output of each component of the program. It presents an overview of high resolution shallow seismic and deep geotechnical coring to show their contribution to the drilling of an offshore well. The objective of site survey is to prevent loss of well, equipment, and life that could be caused by shallow drilling hazards such as shallow gas, shallow fault, unstable seafloor or problems associated with permafrost and gas hydrates.

- D 186 "Technology Update - Artificial Islands in the Beaufort Sea."

D. Garratt.

In PROCEEDINGS OF THE SEVENTH ARCTIC ENVIRONMENTAL WORKSHOP, FAIRMONT, B.C., APRIL 12-15, 1978.

Arctic Petroleum Operators' Association (APOA) and the Canadian Petroleum Association (CPA).

Toronto, Ontario : The Institute of Environmental Studies, University of Toronto, 1978. pp. 25-38.

333.823 05 Arc 1978

The focus of this paper is the use of artificial islands as drilling platforms within Imperial Oil's acreage in the Mackenzie Delta/Beaufort Sea area. The physical environmental conditions to which the islands are exposed are briefly outlined and design, construction and operational constraints are all discussed. A photograph of an Imperial Oil artificial island is included as well as two diagrams showing details of artificial island design features.

Gravity structures, for offshore oil exploration and production in the Beaufort Sea, derive resistance to large lateral ice loads through interaction with sea floor soils. As certain areas of the Beaufort Sea are underlain by relatively weak cohesive soils, it may be necessary to conduct soil improvement work. This paper discusses and evaluates one method of soil improvement - in situ cement mixing - based on laboratory tests carried out on sample soil borings from the Beaufort Sea. Graphs are provided and there is a list of references.

- D 189 "Topside Engineering for Harsh Environments."
Leroy M. Williams and John R. Lancaster.
In HARSH ENVIRONMENT AND DEEPWATER HANDBOOK.
edited by Robert G. Burke.
Houston, Texas : Pennwell Publishing Company. Energy Group, 1985.
pp. 73-77.

622.182 82 Har 1985

The authors of this paper argue that design of oil rigs, for harsh environments, is not so much a technical consideration as it is a systems approach to the most effective use of existing technology. The design of topside facilities in harsh environments is influenced in numerous aspects by operational considerations - operating seclusion for an extended period of time, replacement equipment, safety, structural fatigue due to excessive forces, and super large or very small modular facilities. The authors discuss engineering and design of topside facilities, which essentially function to produce oil, process associated gas, dispose of produced water and transport the produce.

This study, funded by the Northern Oil and Gas Action Program (NOGAP), was prepared for the Department of Indian Affairs and Northern Development (DIAND). A research project, conducted in Baffin Bay and Lancaster Sound, to measure ship noise during ice-breaking is described and the results discussed. The data provided are technical in nature emphasizing the procedures and equipment used in the research. As well, graphs to illustrate sound pressure spectra for various ranges, speeds and ice conditions are provided. The basis for this study is the increased interest in year-round marine transportation in the Arctic and environmental concerns in terms of the effects on marine life of noise made by ships breaking ice.

Disposing of oil and oiled debris from Arctic oil spills presents problems not encountered in temperate regions. The remoteness of the sites, the wide range of environmental conditions, the lack of support facilities (like roads and dump sites) and the presence of permafrost make many standard disposal techniques unsuitable. This paper describes methods of disposal developed by Dome Petroleum Limited which now form part of Dome's oil spill response plans in the Beaufort Sea. These methods include air-deployable igniters to burn pooled oil, a helicopter transferable incinerator for burning oil contaminated debris, and a fireproof boom for offshore open water use. This paper includes photographs, a map and a short list of references.

EDMONTON, ALBERTA, SEPTEMBER 12-14, 1983.
Calgary, Alberta : s.n., 1983. 46 pp.

622.182 82 CODD 1983

This paper provides background information in support of concrete honeycomb structures for use in the arctic marine environment. The historical use of concrete as a marine arctic material is documented and the special considerations for its specific use, in arctic offshore drilling and production structures, is discussed. It is reported that the arrangement of modular, honeycomb framed concrete elements, in side by side and stacked configurations, is shown to provide a practical, cost-effective and mobile alternative to gravel or caisson retained islands. Numerous illustrations are included and a list of references is provided.

Chemical explosions are used for marine seismic exploration in a very limited number of exploration areas which are characterized by particular data acquisition problems (e.g. water too shallow for conventional seismic vessels, year-round ice cover that prohibits normal marine operations). This author gives examples of chemical explosive use near Sable Island, and in the Arctic Islands, and argues in favour of its continued use in certain circumstances.

Materials, 1984. pp. 143-160.

628.168 33 ASTM

This paper documents the results of research conducted to test the effectiveness of dispersants in an open-ocean, cold water environment. The research involved using remote sensing technology to obtain quantitative data on the spreading characteristics of an oil slick, and changes in inter facial tension, that affect dispersion as well as spreading. It is stated that the technique described here has the potential to measure the effectiveness of a dispersant without the need for an extensive water sampling program.

D 200 USE OF THERMAL DISCHARGE FOR ICE MANAGEMENT FOR THE
ARCTIC PRODUCTION LOADING BASIN.

Acres Santa Fe Inc.

Beaufort EIS Reference Works 1982.

Calgary, Alberta : Acres Santa Fe Incorporated, 1982. 14 pp.

387.16 Acr

Prepared for Dome Petroleum Limited, this study constitutes a brief
review of the possibility of using a thermal discharge to control the
accumulation of ice inside the proposed Arctic Production and Loading
Basin for the Koakoak development. Without some measures to control
ice growth, it is calculated that the undisturbed ice cover in the
basin would typically reach a thickness of 1.9m and thickness in the
ship track would be even greater - potentially 6.3m. Four different
cases representing alternative management approaches are considered,
and heat requirements are calculated in each. Using a mathematical
model of unsteady heat transfer, a parametric study was made of the
effects of the average frequency of tanker arrivals on heat
requirements.

Eastern Arctic Study, Case Study Series.
Kingston, Ontario : Centre for Resource Studies, Queen's University, 1985. 77 pp.

333.823 1 Bro

This case study examines exploration for hydrocarbon resources in the Beaufort Sea since the late 1960s. The study focuses on the interaction among three major proponents of development of the area's hydrocarbon resources: the oil companies (Dome Petroleum Limited, Esso Resources Canada Limited and Gulf Canada Resources Inc.), the federal and territorial governments, and communities in the region. The authors define issues emerging from the government/oil company/community interactions and suggest lessons to be learned from each issue in terms of industrial development and local involvement in that development.

This author represents the Beaufort Sea Community Advisory Committee and the paper consists of a short review of that group's activities and organization. Funded by Dome Petroleum, but otherwise independent of them in every way, the group was formed in 1976, to monitor northern energy development in the Beaufort Sea area, and consists of members of Northwest Territories' communities - representatives of hunters' and trappers' associations, town or settlement councillors. The author discusses information-gathering tours taken by the committee, and identifies the major issues of concern relative to native people receiving benefits from hydrocarbon exploration and production in the Beaufort Sea region.

333.823 05 Arc 1980

Officially known as the Lancaster Sound Regional Study, the
Lancaster Sound Green Paper was initially the result of a
recommendation from the Environmental Assessment and Review Panel
(EARP) that viewed an application, by Norlands Petroleums Ltd., for
permission to drill in Lancaster sound, N.W.T., in 1979. This paper
examines the progress of the Regional Study, and its evolution as a
northern land planning program, which will evaluate conflicts and
compatibilities arising from present and potential resource
development. With the assistance of charts, the author illustrates the
approach and methodology employed in conducting the study.

LAND USE PLANNING IN NORTHERN CANADA.

Canada. Department of Indian Affairs and Northern Development
s.l. : Canada. Department of Indian Affairs and Northern
Development, 1982. 160 pp.

333.731 7 DIAND

The growing pace of northern energy and other industrial development, the continued reliance of native peoples on renewable resource harvesting, and the increased awareness and interest in conserving unique and sensitive areas have resulted in land and related resource use conflicts in many parts of the north. This document is a draft of the Department of Indian Affairs and Northern Development's (DIAND) proposed publication on northern land use planning. Land use planning is a process for determining the uses of land, and related resources based upon cooperative decision-making by governments, groups and individuals according to their various needs and desires and to the limitations imposed by the environment.

MARCHING TO THE BEAT OF THE SAME DRUM: TRANSPORTATION OF PETROLEUM AND NATURAL GAS NORTH OF 60°. PROCEEDINGS OF THE SPECIAL COMMITTEE OF THE SENATE ON THE NORTHERN PIPELINE, MARCH 30, 1983. CHAIRMAN: EARL A. HASTINGS.

Canada. Parliament. Senate. Special Committee on the Northern Pipeline.

Canada. Parliament. Senate. Twenty-first Proceedings on Offshore Transportation Study.

Ottawa, Ontario : Canada. Parliament. Senate. Special Committee on the Northern Pipeline, 1983. 84 pp.

387.506 Can

The role of this Senate Special Committee was to examine, consider and report on the transportation of oil and natural gas in Canada, north of the 60th parallel, and on any matters relating thereto. This report emphasizes the Committee's opinion that it is not possible to consider hydrocarbon transportation in isolation from exploration, development and production and thus the committee's recommendations, presented in this report, cover more than simply the northern pipeline. They include concerns such as land claims, operating and safety standards, funding for experimental technology relative to cold ocean operations, education and training for northern residents and general social and economic considerations.

1982 BEAUFORT SEA PLANNING MODEL: GENERAL ASSUMPTIONS.

Dome Petroleum Limited, Esso Resources Canada Limited, and Gulf Canada Resources Inc.

Beaufort EIS Support Document 1982.

s.l. : s.n., 1982. various pag.

333.823 215 DOME

The Beaufort Sea Planning model was developed by Dome Petroleum Limited, with the technical and financial assistance of Esso Resources Canada Limited and Gulf Canada Resources Inc. The model was designed to assist in analyzing the development options available for the Beaufort Sea-Mackenzie Delta Region. This volume, presenting the model in detail, allows planners to test various assumptions related to development which assist in narrowing down scenarios to a small group of feasible schemes. It is pointed out that, while the model is a useful planning tool, the final selection of a development plan for the hydrocarbon resources of the area will be based on discovery rates, operational practicality, technical and economic feasibility, as well as social and environmental concerns.

- E 16 NORTHERN DEVELOPMENT. THE CANADIAN DILEMMA.
Robert Page.
Toronto, Ontario : McClelland and Stewart Limited, 1986. 360 pp.

330.971 9 Pag

This book examines two northern development public policy forums of the 1970s - the Commission on the Mackenzie Valley Pipeline chaired by Mr. Justice Berger and the National Energy Board (NEB) hearings on northern pipeline development. The author discusses these forums in their broader historical context and analyses the problems facing northern development plans, such as environmental concerns, native land claims, technological aspects and the very large capital requirements of resource exploitation in the north. The matter of public participation in the process of northern development policy-making is discussed and, as well, consideration is given to the role of public interest groups as a third participant, with government and business, in decision-making. A comprehensive index is provided.

- E 19 OIL AND GAS NORTH OF 60. A REPORT OF ACTIVITIES IN 1969, OF THE OIL AND GAS INDUSTRY IN THE YUKON TERRITORY AND NORTHWEST TERRITORIES.

Canada. Department of Indian Affairs and Northern Development.

Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1970. 62 pp.

338.209 719 DIAND 1969

Oil and gas exploration activities in the Yukon Territory and Northwest Territories for 1969 are documented in this report. Estimates of oil and natural gas reserves are provided and information is given on such items as the number of permits issued, royalty rates, expenditures, geological exploration, number of wells drilled and gross revenues for the year. There are numerous tables, maps and diagrams used to supplement the text and some photographs are included.

United States. Congress. Office of Technology Assessment. Report
OTA-0-270.
Washington, D.C. : United States Government Printing Office, 1985.
227 pp.

622.338 2 OTA

The report explores the range of technologies required for exploration and development of offshore energy resources in the Arctic, and assesses associated economic factors and financial risks. As well, the report evaluates the environmental factors related to energy activities in frontier regions and considers government regulatory and service programs. For the purposes of this document, the Arctic is defined as the Alaska Continental Shelf and the Beaufort, Chukchi and Bering Seas and "deepwater" is defined as offshore areas where water depths exceed 400 meters.

330.971 9 Mar

This paper deals with hydrocarbon development in the Alaskan Beaufort Sea and North Slope, Alaska regions. The speaker examines the estimated hydrocarbon potential of the area, major development options, and transportation alternatives. The economic, technical and environmental factors which may affect the pace of development, and the mode of transportation, are discussed, as well as the U.S. government's regulations covering exploration, production and transportation.

Calgary, Alberta : Arctic Institute of North America, University of
Calgary, 1980. pp. 83-108.

333.823 05 Arc 1980

The author of this paper addresses the feasibility of oil discovered in the Arctic Ocean coming on-stream by the mid-1980s, and displacing most, or all, Canadian oil import requirements by 1990. A history of Dome's exploration work in the Beaufort Sea is outlined and the author goes on to discuss commercial reserves, technology, cost estimates, environmental considerations, and transportation. Considerable use is made of charts and graphs in this fairly detailed and technical paper.

pp. 30-55.

346.046 823 Cro

This paper addresses the relationship of northern resource development to Canadian economic and industrial strategy. The author discusses the amount of oil and gas that should be exported, as well as the optimal timing of production and exports, from the various regions of Canada, and how best to achieve maximum efficiency of the industry while minimizing damage to the environment. Pipeline funding and native interests are examined, and the author identifies issues in northern energy development which impact on other facets of the country's economic stability.

E 29 "Project Management of Beaufort Sea Development: The Unique Challenge."

David G. Stenning and John R. Smith.

In ARCTIC OFFSHORE TECHNOLOGY CONFERENCE AND EXPOSITION PROCEEDINGS, CALGARY, ALBERTA, OCTOBER 28-31, 1986.

Calgary, Alberta : Arctic Offshore Technology Conference, 1986.

14 pp.

620.411 3 AOTC 1986

The purpose of this paper is to identify some of the project management challenges posed by production development projects in the Beaufort Sea, concentrating on the areas which are somewhat unique in comparison to non-Arctic projects. The project phases which are most unique and upon which this paper focuses are: design criteria and philosophy; concept development; installation; and operation.

E 30 RESOURCE DEVELOPMENT IN CANADA'S NORTH: MANAGING IMPACTS ON PEOPLE AND THEIR ENVIRONMENT.

Denis M. Watson.

Presentation to: "Strategies for Environmentally Sound Development on the Mining and Energy Industries".

s.l. : s.n., 1984. n.p.

333.715 Wat

The author of this paper discusses the economic, social and environmental impacts of mining and energy development in the Canadian north. The roles of resource companies, federal government departments and regulatory agencies are explained, particularly the National Energy Board (NEB) and the Environmental Assessment and Review Panel (EARP). Rapid change, conflicts of people and their goals and the search for compromise are assessed relative to the development of northern energy resources.

- E 31 "The Role and Perceptions of Public Interest Groups or 'The View from CARC'."
William E. Rees.
In PROCEEDINGS OF THE NINTH ENVIRONMENTAL WORKSHOP,
FAIRMONT, B.C., MAY 4-7, 1980.
Arctic Petroleum Operators' Association (APOA) et al.
Calgary, Alberta : Arctic Institute of North America, University of
Calgary, 1980. pp. 288-305.

333.823 05 Arc 1980

The author of this paper is a member of the Canadian Arctic Resources Committee (CARC). It is the belief of this group that the biophysical and political facts of resource development decisions in Canada demand a clear understanding of, and respect for, the public interest. The author explains that CARC's role is that of a catalyst encouraging government and industry to face the critical issues and choices associated with northern development. CARC's research programs, information and publishing programs and perspectives on the northern environment, including the activities of the environmental assessment and review process, are examined. A short list of references is included with this paper.

- E 32 "The Role of Non-Government Groups in Project Assessment and the Regulatory Process."
Peter Burnet.
In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.
Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association - Offshore Operators' Division (CPA-OOD), 1984. pp. 142-143.

333.823 05 Arc 1984

The author of this brief paper is the Executive Director of the Canadian Arctic Resources Committee (CARC). From the perspective of non-governmental groups (such as CARC), the author discusses his view of the excessive length of the government's approval process for major northern development proposals. He presents his opinion that one important cause of this situation is the failure of industry, and to an extent government, to accept the legitimacy of a role for non-governmental agencies in project assessment and approval. A short review of roles which can be taken by non-governmental groups, and the importance of such intervention, conclude this paper.

- F 1 ALASKA HIGHWAY GAS PIPELINE PROJECT. TRANSPORTATION AND LOGISTICS PLAN. PHASE II.
Foothills Pipe Lines (Yukon) Ltd.
s.l. : Foothills Pipe Lines (Yukon) Ltd., 1982. various pag.
330.971 FPL(Y)

This plan for Phase II construction of the Alaska Highway Gas Pipeline (AHGP) was prepared for submission to the Northern Pipeline Agency in response to requirements, specified in the socio-economic terms and conditions for north B.C., Swift River, and the draft socio-economic terms and conditions for South Yukon, for a transportation and logistics plan. Two principal socio-economic objectives are dealt with: 1) Foothills Pipelines (Yukon) Ltd.'s (FPL(Y)) endeavour, in its use of existing transportation facilities, not to disrupt those services; and 2) FPL(Y)'s responsibility to bear the cost of any additional transportation infrastructure provided at the request of the company, and its assurance that such infrastructure will be built, maintained and disposed of to provide maximum long term benefit to those communities affected by the additional infrastructure.

- F 4 "Approval of the Bent Horn Project."
D.R. Whelan.
In PROCEEDINGS OF THE FOURTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, "MAKING THE FRONTIERS CONVENTIONAL", FAIRMONT, B.C., MAY 12-15, 1985.
Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1985. pp. B38-B45.

333.823 05 Arc 1985

This paper reviews what the Canadian Oil and Gas Lands Administration (COGLA) has learned, from the Bent Horn Project, about the regulatory approvals which are required by the Canada Oil and Gas Act and the Oil and Gas Production and Conservation Act. As well, the process by which those approvals are granted is described. While other government processes are discussed, the main emphasis is on those approvals for which COGLA is responsible. The Bent Horn project is notable because it involves, for the first time, the production and transportation of crude oil from the Arctic Islands.

F 5 "Arctic Marine-Oriented Research and Development."

Robert A. Dick.

In MARINE TRANSPORTATION AND HIGH ARCTIC DEVELOPMENT: POLICY FRAMEWORK AND PRIORITIES: SYMPOSIUM PROCEEDINGS, MONTEBELLO, QUEBEC MARCH 21-23, 1979.

s.l. : Canadian Arctic Resources Committee, 1979. pp. 59-64.

330.971 9 Mar

This paper examines present government policy in terms of marine research and development, which is mainly by partial-funding of industry-promoted projects. The diverse viewpoints of environmentalists and industrialists, concerning the tapping of Arctic resources, are discussed and emphasis is placed on the need for political parties and government agencies to encourage the development of Arctic resources, while ensuring protection of the national interest and environmentally sensitive areas. It is the author's view that environmental activists must be prepared to accept solutions other than a "hands-off" policy but that industrial interests, while pursuing the development of commercial projects, must give every consideration to the protection of the environment. These considerations require the expenditure of funds and the government's role in this process is discussed.

F 6 ARCTIC MARINE TRANSPORTATION R & D PLAN 1986/87 TO 1990/91 (PHASE III), 2ND EDITION.

Sypher Consultants.

Ottawa, Ontario : Canada. Department of Transport, 1985. 2 vol.

665.543 Syp

This document describes the Arctic Marine Transportation R & D (research and development) Plan - Phase III. The federal government has been monitoring and evaluating the developments in the Arctic in order to ensure that concerns related to marine transportation are identified and dealt with appropriately. This process has resulted in a number of initiatives, including the development of special regulations, the undertaking of environmental assessments, and the creation of administrative bodies to focus government activities and responsibilities. Volume 1 of this set contains the text of the research and development plan and Volume 2, the appendices.

- F 7 AN ASSESSMENT OF THE IMPACT OF REGULATORY REGIMES ON OIL AND GAS EXPLORATION ON LAND NORTH OF 60°.
Dimensions Planning Ltd., in association with Manadrill Management Inc.
Calgary, Alberta : Dimensions Planning Ltd., 1986. 130 pp.

333.823 1 Dim

This report, prepared for the Department of Indian Affairs and Northern Development (DIAND), presents a comparative review of the regulatory costs of oil and gas exploration in the Mackenzie Valley and Delta on land areas, relative to the costs of comparable activities south of 60° in northern Alberta and/or northeastern British Columbia. The approach taken by the study team is described and the key contributors to additional costs are examined. Preliminary recommendations for change, based on the findings of the study, are presented. Appended information includes typical well cost breakdowns, a list of relevant acts and regulations, revised Canada benefits principles, and a bibliography.

F 11 BEAUFORT SEA HYDROCARBON PRODUCTION AND
TRANSPORTATION PROPOSAL: FINAL REPORT OF THE
ENVIRONMENTAL ASSESSMENT PANEL.

Canada. Federal Environmental Assessment Review Office.

Federal Environmental Assessment and Review Process ; 25.

Ottawa, Ontario : Federal Environmental Assessment Review Office, 1984. 146 pp.

333.823 163 27 Fed

This report, for the Minister of the Environment and the Minister of Indian Affairs and Northern Development, details the Beaufort Sea Environmental Assessment Panel's (BSEAP) review of the Beaufort Sea hydrocarbon production and transportation proposal. The report focuses on the proposal submitted by Dome Petroleum Limited, Esso Resources Canada Limited and Gulf Canada Resources Inc., on behalf of all acreage holders in the Canadian Beaufort Sea-Mackenzie Delta region. In some detail, the following topics are discussed and recommendations are included: review process; proposal; oil spills and risk; human environment; natural environment; and government management.

- F 15 "Canada's Petroleum Leasing Policy - A Cornucopia For Whom?"
Andrew Thompson and Michael Crommelin.
In PAPERS PRESENTED TO THE CANADIAN ARCTIC RESOURCES
COMMITTEE, OTTAWA, 22 MARCH, 1973.
Ottawa, Ontario : Canadian Arctic Resources Committee, 1973.
pp. 1-29.

346.046 823 Cro

This paper examines the arrangements and legislation governing leases for oil and gas exploration in the Canadian north, royalty payments and tenures. The authors (one of whom is an expert in oil and gas law and the other a legal specialist in oil and gas policy) argue that the existing leasing regulations are a resource "give-away" and not in the public interest. There is a review of the current system, and suggestions for changes which would see a balance struck between serving the public interest and preserving the investment which industry has made.

CANADIAN ENERGY POLICY: AN INTERIM REPORT. PROCEEDINGS OF THE STANDING SENATE COMMITTEE ON ENERGY AND NATURAL RESOURCES, AUGUST 21, 1985. CHAIRMAN EARL E. HASTINGS. Canada. Parliament. Senate. Standing Committee on Energy and Natural Resources. Third Report of the Committee. Ottawa, Ontario : Standing Senate Committee on Energy and Natural Resources, 1985. 31 pp.

333.791 097 1 Can

The role of the Standing Senate Committee on Energy and Natural Resources is to review the National Energy Program (NEP) and its effect on Canadian energy development. This interim report addresses two issues. Firstly, the fiscal arrangements, structure and behavior of the domestic petroleum industry are reviewed and, secondly, the question of energy policy-making in the national interest is considered.

- F 18 THE CANADIAN REGULATION OF OFFSHORE INSTALLATIONS.
Christian G. Yoder.
Canadian Institute of Resources Law. Working Paper 9.
Calgary, Alberta : Canadian Institute of Resources Law. University of
Calgary, 1985. 116 pp.

343.710 722 Yod

This paper discusses Canadian regulations for offshore installations involved in the search for hydrocarbon resources. In the first four parts of the paper, sources of law that impact on offshore installations are examined: 1) coastal oil and gas regulatory law; 2) maritime law; 3) environmental law; and 4) labour law. In part five, selected problems raised by the interface between those sources of law are discussed. The author provides a Table of Statutes, Table of Regulations and a Table of Cases Cited.

- F 19 "Canadian Security Policy in the Arctic: The Context for the Future."
W. Harriet Critchley.
In MARINE TRANSPORTATION AND HIGH ARCTIC DEVELOPMENT:
POLICY FRAMEWORK AND PRIORITIES: SYMPOSIUM PROCEEDINGS,
MONTEBELLO, QUEBEC MARCH 21-23, 1979.
s.l. : Canadian Arctic Resources Committee, 1979. pp. 181-209.

330.971 9 Mar

This paper discusses the strategic value of Canada's high Arctic and national security policy in that regard. The speaker argues that three sets of factors are particularly significant in this area and suggest the need for change in defence priorities and foreign policy. The factors are: changes in, and disputes concerning, international law of the sea; the energy shortage and its ramifications for the high Arctic; and certain developments in military technology which may cause parts of the Arctic to become a new focus of military activity. Each of these sets of factors is examined and the effects of their combination on defence and foreign policy are analyzed.

"The Challenge of the 80's: A Government View."

John H. Parker.

In THE CHALLENGE OF THE EIGHTIES. PROCEEDINGS [OF THE] NORTHERN TRANSPORTATION CONFERENCE, WHITEHORSE, YUKON, OCTOBER 5-7, 1982.

Edmonton, Alberta : Co-op Press Ltd., 1982. pp. 4-6.

380.5 Nor

This author, the serving Commissioner of the Northwest Territories, provides an overview of the transportation system in the Northwest Territories and explains the growth of the transport networks in the seventies. Emphasis is placed on the fact that because the population is widely dispersed, economic regulation by the Canadian Transport Commission (CTC) is preferable to any move towards deregulation. The presentation concludes by the author explaining that, under the Government of the Northwest Territories' (GNWT) Resource Development Policy, further development of northern resources, including transportation, must be judged to have a net benefit to the peoples of the north before being undertaken.

conferences / Northwest Territories / GNWT / transportation / CTC / regulations / northern energy development / transportation, air / transportation, marine

F 21

"The Challenge of the 80s: A User's View."

Charles R. Hetherington.

In THE CHALLENGE OF THE EIGHTIES. PROCEEDINGS [OF THE] NORTHERN TRANSPORTATION CONFERENCE, WHITEHORSE, YUKON, OCTOBER 5-7, 1982.

Edmonton, Alberta : Co-op Press Ltd., 1982. pp. 7-8.

380.5 Nor

In this short paper, the author contends that reduced cash flows accruing to the western Canadian resource industry under the National Energy Policy (NEP) represent the major obstacle towards achieving energy self sufficiency. It is argued that changes in taxation and royalty regulations, removal of imported crude oil subsidies, creation of a single window for industries dealing with government agencies, and simplification of government project approval processes would lead to increased development activity.

- F 23 "COGLA's Role in Project Assessment."
Sheryl Kennedy.
In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-ODD
WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.
Calgary, Alberta : Arctic Petroleum Operators' Association
(APOA)/Canadian Petroleum Association-Offshore Operators' Division
(CPA-ODD), 1984. pp. 130-133.

333.823 05 Arc 1984

The Canadian Oil and Gas Lands Administration (COGLA) is involved with almost every aspect of the activities of oil and gas exploration, and production, in Canada. After explaining the administrative organization of COGLA, the author of this paper continues by discussing the role COGLA plays in project assessment in Canadian hydrocarbon development projects. Aspects examined include what COGLA's involvement consists of, and at what stage of development the involvement occurs, as well as how project assessment is carried out. In conclusion, the author defines COGLA's objective in project assessment - to design and develop better projects in a timely manner.

A COMPREHENSIVE CONSERVATION POLICY AND STRATEGY FOR THE NORTHWEST TERRITORIES AND YUKON. DRAFT DISCUSSION PAPER.

Canada. Department of Indian Affairs and Northern Development.

s.l. : Canada. Department of Indian Affairs and Northern Development, 1982. 98 pp.

333.720 971 9 DIAND

This draft discussion paper begins by reviewing the limited success of the Department of Indian Affairs and Northern Development (DIAND), over the previous decade, in dealing with proposals to establish conservation and recreation areas north of 60°. The paper goes on to identify DIAND's roles and responsibilities in this process, namely DIAND's status as the federal agency responsible for the control, management and administration of northern public lands, and the formulation, implementation and coordination of government activities, programs and policies in the north. Emphasizing these roles, this paper presents a conservation strategy, including draft position papers on national parks and ecological reserves.

"Current Developments in Oil and Gas Taxation."

John G. MacDonald.

In THE CANADIAN ARCTIC AND NORTHERN REGIONS AND OTHER SELECTED MATTERS OF CURRENT INTEREST TO THE OIL AND GAS INDUSTRY: PETROLEUM LAW SUPPLEMENT.

edited by Maurice J. Sychuk.

Alberta Law Review: Special Issue, vol. X no. 3, 1972.

Edmonton, Alberta : University of Edmonton, Faculty of Law, 1972. pp. 506-522.

343.077 2 Alb

This article summarizes the current law with respect to income taxation of oil and gas production, and then outlines and analyzes the changes in taxation of the oil and gas industry contained in Bill C-259. Exploration and development expenses, depletion allowances, the purchase and sale of oil and gas rights, and oil and gas drilling funds are discussed. The author concludes that the proposed new law would not appear likely to unduly impede the growth and development of the Canadian oil and gas industry.

Calgary, Alberta : Arctic Institute of North America, University of
Calgary, 1981. pp. 105-111.

333.823 15 Fro

This paper discusses two principles concerning industrial development, namely, capitalizing on Canada's energy base in order to build a world-competitive industrial sector, and ensuring that the federal government is an active player in industrial development rather than simply being a passive referee. As a representative of the federal Department of Industry, Trade and Commerce, this speaker examines changes and plans, within that Department, which will facilitate more effectively the cooperation necessary to implement major frontier developments to the satisfaction of both government and industry.

- F 29 DRILLING FOR OIL AND GAS ON CANADA LANDS. GUIDELINES AND PROCEDURES. SEPTEMBER 1984.
Canada. Oil and Gas Lands Administration.
s.l. : Canada. Department of Energy, Mines and Resources and Department of Indian Affairs and Northern Development, 1984.
various pag.

343.077 2 COGLA

The Canadian Oil and Gas Lands Administration (COGLA) is the agency responsible for the administration of oil and gas activity in the Canada lands. The purpose of this document is to provide actual and prospective oil and gas operators with guidelines and information to assist them in meeting regulatory requirements, with the focus on drilling activity. The document is divided into three principal parts which deal with the three major regulatory themes laid out in the drilling regulations: 1) drilling program approval; 2) authority to drill a well; and 3) requirements related to drilling operations, post-drilling reports and well materials.

Ottawa, Ontario : Canadian Arctic Resources Committee, 1982.
90 pp.

351.009 3 CARC

The Canada Oil and Gas Act provides for the administration of oil and gas exploration and development activities on Canada lands, which include the offshore. The act creates two Environmental Studies Revolving Funds (ESRF) which are administered north of 60° by the Department of Indian Affairs and Northern Development (DIAND) and south of 60° by the Canada Oil and Gas Lands Administration (COGLA). The purpose of the ESRF is to provide for environmental or social studies that will assist these agencies in deciding whether or not to authorize oil and gas activities in a particular region. This volume synthesizes the discussions and extracts trends and recommendations from a two day workshop which brought together professionals, with diverse experience in the offshore areas of Canada, in an attempt to reach a broad consensus on the use of the ESRF. A list of participants is included.

- F 34 AN EVALUATION OF FUNDING OF PUBLIC PARTICIPATION IN THE
BEAUFORT SEA ENVIRONMENTAL ASSESSMENT PANEL REVIEW.
Katherine A. Graham et al.
Kingston, Ontario : Institute of Local Government, Queens
University, 1982. various pag.

333.823 16 Gra

Prepared for the Federal Environmental Assessment Review Office (FEARO), this study is an evaluation of the first round of funding of public participation in the Beaufort Sea Environmental Assessment Panel (BSEAP) review. The federal government undertook to fund public participation in the review of hydrocarbon development proposals in the Beaufort Sea on a "one-time" experimental basis, using money from an existing program in the Department of Indian Affairs and Northern Development (DIAND). The purpose of this report is to assess the extent to which participation in the BSEAP review has resulted in the outcomes intended by the funding program, and to assess the ways in which the procedures used in implementing the program affected those activities and outcomes.

Oil spills arising from offshore drilling and production activities can cause property damage and generate cleanup costs. Accordingly, statutes have been enacted to regulate the rights of the various parties involved in such incidents. In Canada, three statutes apply to offshore spills emanating from drilling or production activities - the Oil and Gas Production and Conservation Act, the Arctic Waters Pollution Prevention Act and the Fisheries Act. This paper discusses the liability-imposing provisions of these statutes, as well as reviewing and discussing their political origins. The document includes an appendix containing selected references for proceedings of Parliament, the Standing Committees with respect to the statutes mentioned, and the Canada Shipping Act.

Calgary, Alberta : Arctic Offshore Technology Conference, 1984.
various pag.

665.502 8 Arc 1984

This paper discusses the origins and goals of the Canada Oil and Gas Lands Administration (COGLA), which manages and regulates all oil and gas activities on onshore areas north of 60° and offshore areas of the Hudson Bay, and the Atlantic, Pacific and Arctic oceans. Particular emphasis is placed on COGLA's role in the Arctic regions. The speaker examines the balance between the desire of the oil and gas industry to regulate itself and the political imperative which governs land management.

- F 49 "Marine Engineering R&D Under the Federal Energy Research and Development Plan."
Maurice Ruel.
In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-ODD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.
Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-ODD), 1984. pp. 104-112.

333.823 05 Arc 1984

The author of this paper is the Chairman of the Marine Engineering Research and Development Committee of the federal government's Panel on Energy Research and Development (PERD). This paper identifies the main objective of the marine engineering program - the improvement, through research and development, of the operation and safety of marine hydrocarbon exploration and production systems in the Canada lands. Three areas are highlighted: environmental design criteria; safety technology for marine structures; and marine structures' engineering. The author outlines the work that has been done to date, as well as some projections for the future, in each area. Diagrams are used to elaborate on the information contained in the text.

F 50 NATIONAL ENERGY BOARD ORDER NO. OH-1-79, INTERVENTION TO THE NATIONAL ENERGY BOARD ON APPLICATIONS FOR PUBLIC CONVENIENCE AND NECESSITY TO CONSTRUCT PIPELINE FACILITIES TO TRANSPORT ALASKAN NORTH SLOPE CRUDE OIL TO MARKETS IN THE LOWER 48 STATES. INTERVENTION AND SUBMISSION OF PANCANADIAN PETROLEUM LIMITED.

PanCanadian Petroleum Limited.

Calgary, Alberta : PanCanadian Petroleum Limited, 1979. various pag.

333.823 2 Pan(II)

This volume contains PanCanadian Petroleum Limited's notice of intervention and submission to the National Energy Board (NEB), relative to the Trans Mountain Pipe Line Co. Ltd. and Foothills Oil Pipe Line Ltd. (FOPL) application for authorization to construct an oil pipeline to transport Alaskan North Slope heavy crude oil to the northern United States. PanCanadian's concerns centre on the belief that North Slope heavy crude oil will prematurely displace Canadian heavy crude from its traditional export market.

PanCanadian Petroleum Limited / NEB / Trans Mountain Pipeline Co. Ltd. / FOPL / pipeline co. applications / North Slope, Alaska / exports / pipelines / government / Alaska

F 51 NATIONAL ENERGY BOARD ORDERS NO. OH-1-79 AND NO. PO-1-OH-1-79: WRITTEN DIRECT EVIDENCE OF PANCANADIAN PETROLEUM LIMITED.

333.823 2 Pan(I)

This volume contains the written direct evidence of PanCanadian Petroleum Limited in support of their intervention and submission to the National Energy Board (NEB) in the matter of the Trans Mountain Pipe Lines Co. Ltd. and Foothills Oil Pipe Lines Ltd. (FOPL) application to construct a pipeline to transport Alaskan crude oil to the United States.

PanCanadian Petroleum Limited / NEB / Trans Mountain Pipeline Co. Ltd. / FOPL / pipeline co. applications / pipelines / government / Alaska / North Slope, Alaska

F 52 "The National Perspective."

M. Taschereau.

In PROCEEDINGS OF THE FOURTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, "MAKING THE FRONTIERS CONVENTIONAL", FAIRMONT, B.C., MAY 12-15, 1985.

Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1985 . pp. A10-A18.

333.823 05 Arc 1985

This paper presents a perspective of the regulatory regime administered by the Canada Oil and Gas Lands Administration (COGLA). The writer stresses the importance of cooperation, between government and industry, in working towards the implementation of detailed technical regulations regarding hydrocarbon exploration and production.

COGLA / regulations / regulatory agencies / hydrocarbon production / legislation / energy policy / exploration / government / land use / Canadian content / workshops

F 53 1984-85 REVIEW. ARCTIC MARINE TRANSPORTATION RESEARCH AND DEVELOPMENT PROGRAM. TRANSPORT CANADA.

Canada. Bureau of Management Consulting.

s.l. : Canada. Bureau of Management Consulting, 1985. various pag.

351.877 5 BMC 1984/85

This review documents the achievements of the Transport Canada (TC) Arctic Marine Transportation Research and Development Program, and assesses future alternatives with a view to ensuring continuation of funding for the program from the Treasury Board. Six aspects of the program are examined in this review: 1) the structure of the program activities; 2) the implications of program results for the regulations under the Arctic Waters Pollution Prevention Act; 3) the improvements in government marine services that have resulted from the program; 4) industrial benefits; 5) future alternatives; and 6) management of the program. Much of the information is presented in tabular format.

F 54 "Northerners and the Environmental Studies Revolving Funds."
Yvon Dube.

In TWELFTH ANNUAL ARCTIC ENVIRONMENTAL WORKSHOP: ISSUES OF THE 80'S, FAIRMONT, B.C., MAY 8-11, 1983 (CANADIAN PETROLEUM ASSOCIATION (CPA), EASTCOAST PETROLEUM OPERATORS' ASSOCIATION (EPOA) AND ARCTIC PETROLEUM OPERATORS' ASSOCIATION (APOA)).

Calgary, Alberta : Canadian Petroleum Association, 1983. pp. 32-36.

333.823 05 Arc 1983.

This speaker explains that the Environmental Studies Revolving Funds (ESRF) were created under the Canada Oil and Gas Act. The northern ESRF is administered by the Department of Indian Affairs and Northern Development (DIAND), while the southern ESRF is administered by the Canada Oil and Gas Lands Administration (COGLA). The administrative organization for the northern ESRF is outlined, together with an explanation of its scope and objectives for the future.

F 56 NOTES FOR SEMINAR ON ORGANIZATIONAL REQUIREMENTS AND PROCEDURES WITH RESPECT TO IMPLEMENTATION OF TERMS AND CONDITIONS OF THE PERMIT AGREEMENT FOR CANADIAN SECTION OF THE ALCAN PIPELINE SYSTEM.

Einar Skinnarland.

s.l. : s.n., 1978. various pag.

330.971 Skin

This extensive volume pertains to the preparation of a permit agreement between Canada and the U.S. companies involved in the design, construction, operation and abandonment of the Canadian section of the Alcan Gas Pipeline System. The importance of such an agreement incorporating technical, socio-economic and environmental provisions, in addition to the normal terms and conditions of a certificate of public convenience and necessity, is emphasized. Administrative and organizational structures for implementation of an agreement are provided and the stipulations used successfully by the U.S. Department of the Interior for the Trans-Alaska Pipeline System (TAPS) are cited as an appropriate foundation for use in preparing the Alcan agreement.

F 57 OIL AND GAS CONSERVATION ON CANADA LANDS.

Owen L. Anderson.

Canadian Institute of Resources Law. Working Paper 7.

Calgary, Alberta : Canadian Institute of Resources Law, University of Calgary, 1985. 122 pp.

346.046 823 And

This paper examines Canada's Oil and Gas Production and Conservation Act, which provides for the regulation of exploration, drilling, production, conservation, processing and transportation of oil and gas on Canada lands. The author provides a brief review of the history and rationale for petroleum conservation laws and examines the actual procedures for pursuing oil and gas conservation.

- F 58 OIL MARKETING: 1986. PROCEEDINGS OF THE STANDING SENATE COMMITTEE ON ENERGY AND NATURAL RESOURCES, JUNE 25, 1986. CHAIRMAN EARL A. HASTINGS.
Canada. Parliament. Senate. Standing Committee on Energy and Natural Resources.
Fifth Report of the Committee.
Ottawa, Ontario : Standing Senate Committee on Energy and Natural Resources, 1986. 50 pp.

333.823 217 Sta

This Committee's study of oil marketing in Canada was conducted from January to June 1986 - a period during which a decline of almost 60% in the price of oil took place. One of the motives for conducting this study was to help the public understand the new environment of Canadian oil supply, demand and trade and this is discussed here. Oil marketing practices are examined and the dramatic slow-down in frontier exploration activities, with the attendant socio-economic impacts, is addressed.

government / energy policy / marketing / socio-economic impacts / northern energy development / exploration / employment / energy requirements

- F 59 OPERATIONAL PROCEDURES: BEAUFORT SEA ENVIRONMENTAL ASSESSMENT PANEL.
Beaufort Sea Environmental Assessment Panel.
s.l. : Beaufort Sea Environmental Assessment Panel, 1981. 9 pp.

333.823 21 BSEAP

The formally adopted operational procedures, governing the conduct of the Beaufort Sea Environmental Assessment Panel, are detailed in this short publication, which assists those wishing to participate in the Panel's activities. A brief list of definitions is included.

PETROLEUM OPERATIONS ON THE CANADIAN CONTINENTAL MARGIN: THE LEGAL ISSUES IN A MODERN PERSPECTIVE.

Ian Townsend Gault.

Canadian Continental Shelf Law 1: Working Paper 2.

Calgary, Alberta : Canadian Institute of Resources Law, University of Calgary, 1983. 120 pp.

343.71 Tow

Published by the Faculty of Law at the University of Calgary, this paper presents an overview of the primary legal issues which arise in the context of oil and gas exploration, development, and production in the Canadian offshore. Applicable international law is surveyed and problems arising from the conflicting uses of the seas are also discussed. Conceptual issues in Canadian law are examined, the impacts of the National Energy Program (NEP) and the Canada Oil and Gas Act are assessed and the structure and mandate of Canada Oil and Gas Lands Administration (COGLA) is outlined. The paper concludes with an outline of issues arising in connection with offshore installations and environmental issues.

F 62 "Pre-final Argument in Summary, Mackenzie Valley Pipeline Hearing."
R.A. Bradley.
In MACKENZIE VALLEY PIPELINE HEARING: PRE-FINAL ARGUMENTS
SUBMITTED TO THE NATIONAL ENERGY BOARD BY VARIOUS GAS
COMPANIES.
Toronto, Ontario : s.n., 1977. various pag.

330.971 92 Mack

This volume, prepared for submission to the National Energy Board (NEB), contains the author's arguments in support of his intervention in the Mackenzie Valley Pipeline hearing. The author outlines a conveyor system for transporting gas, and potentially other products, as opposed to the suggested pipeline.

Mackenzie Valley Gas Pipeline / NEB / public hearings / technology / pipelines / pipeline construction / pipeline financing

F 63 PRESENTATION BY THE GOVERNMENT OF YUKON TO THE SPECIAL
COMMITTEE OF THE SENATE ON THE NORTHERN PIPELINE
REGARDING HYDROCARBON DEVELOPMENTS NORTH OF 60°.
SEPTEMBER 9, 1982.
Government of Yukon.
s.l. : s.n., 1982. 28 pp.

333.823 15 YTGp

In the context of ongoing work toward the production of hydrocarbons in northern Canada, the special Committee of the Senate on the Northern Pipeline, which is examining the transportation of petroleum and natural gas north of 60°, has had many briefs presented by oil companies, government departments and other interested parties. The purpose of this brief is to indicate that Yukoners feel they have a major role to play in Beaufort Sea hydrocarbon developments. As well, the Government of Yukon's commitment to support Yukoners in endeavours in the Beaufort Sea, and to ensure that Yukon benefits from development there, is expressed.

F 64 PROCEDURES FOR GENERAL AND COMMUNITY SESSIONS: AGENDA FOR GENERAL SESSIONS: SCHEDULE FOR PUBLIC SESSIONS: BEAUFORT SEA ENVIRONMENTAL ASSESSMENT PANEL.
Beaufort Sea Environmental Assessment Panel.
s.l. : Beaufort Sea Environmental Assessment Panel, 1983. various pag.

333.823 21 BSEAP(1)

In this guide for participants, procedures for the various sessions of the Beaufort Sea Environmental Assessment Panel (BSEAP) are given in detail. The volume includes the agendas and schedules for the panel's sessions conducted between September and November 1983.

BSEAP / environmental assessment panels / Beaufort Sea

F 65 A PROCESS FOR SITING HYDROCARBON FACILITIES ON THE CANADIAN ARCTIC COAST.
Rogers, Golden and Halpern.
Canada. Environmental Protection Service. Economic and Technical Review Report EPS 3-ES-83-1.
Ottawa, Ontario : Environment Canada, 1983. 118 pp.

622.182 82 Rog

This report was prepared for the Environmental Protection Service, Environment Canada and the Northern Environment Branch, Indian and Northern Affairs Canada. A facility siting process is presented which is intended to involve participants from industry, government and the public, in a type of advocacy approach to the choice of development sites. The process outlines a series of decisions to be made by these representatives, in an attempt to make the assumptions and decisions of siting both explicit and systematic. A glossary and list of references are included.

Beaufort Sea / Arctic / environmental impact / environmental assessment / DOE / hydrocarbon production / ecology / ecology, marine / socio-economic aspects / hydrology / climatology / hydrocarbon reserves / terrain classification / wildlife habitats / Continental Shelf, Canada

- F 66 "Project Assessment: Position of DIAND."
Denis Watson.
In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD
WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.
Calgary, Alberta : Arctic Petroleum Operators' Association
(APOA)/Canadian Petroleum Association-Offshore Operators' Division
(CPA-OOD), 1984. pp. 133-136.

333.823 05 Arc 1984

This speaker explains that, under its Northern Affairs Program, the Department of Indian Affairs and Northern Development (DIAND) is significantly involved in project assessment, with emphasis on environmental impact, technical factors, socio-economic factors, reserves and resources in the north. With specific reference to development in the Beaufort, Mackenzie and high Arctic Regions, several impact assessment studies are reviewed briefly before the speaker outlines the project assessment methodology and process prerequisites of DIAND. A summary of the DIAND Northern Affairs Program philosophy on project assessment concludes this paper.

- F 67 "Rationale/Origin/Status of the Environmental Studies Revolving Funds."
M. Ruel.
In TWELFTH ANNUAL ARCTIC ENVIRONMENTAL WORKSHOP: ISSUES OF THE 80'S, FAIRMONT, B.C., MAY 8-11, 1983 (CANADIAN PETROLEUM ASSOCIATION (CPA), EASTCOAST PETROLEUM OPERATORS' ASSOCIATION (EPOA) AND ARCTIC PETROLEUM OPERATORS' ASSOCIATION (APOA)).
Calgary, Alberta : Canadian Petroleum Association, 1983. pp. 29-32.

333.823 05 Arc 1983

In this short paper, the speaker explains that the Environmental Studies Revolving Funds (ESRF) were established to ensure that the cost of environmental studies was equitably shared by all those active in exploration or development activities on Canada lands. The basic criteria to be applied to all studies are outlined - the topic must be regional/national in scope, the study must be supplementary or complementary to ongoing government work and, lastly, it must be relevant to the decision-making process within the government and regulatory agencies.

- F 68 RECORDS OF THE MACKENZIE VALLEY PIPELINE INQUIRY, RECORD
GROUP 126.
Terry Cook.
Canada. Public Archives. Federal Archives Division. General
Inventory Series.
Ottawa, Ontario : Canada. Public Archives, 1980. 5 pp.

PAM 1980-16

One of a series of inventories published by the Public Archives of
Canada (PAC) to inform researchers, and the general public, of the
extent of federal government records, this document is concerned
with the records of the Mackenzie Valley Pipeline inquiry
(Commissioner, Thomas R. Berger). The inventory provides an
administrative outline of the inquiry, a note on access to the materials
in the collection and a description of the records (which consist of
printed materials, maps, slides, videotapes, and photographs).

- F 72 REGULATORY AND ENVIRONMENTAL ISSUES ASSOCIATED WITH ARCTIC MARINE TRANSPORTATION.
D. Bruchet and M. Robertson.
Calgary, Alberta : Petro-Canada, 1983. 15 pp.

343.710 962 Bru

This paper presents a summary of the Canadian north (demography, education, renewable and non-renewable resources), federal policies for northern development, and the current regulatory controls over arctic marine transportation in Canada. Specific references are made to the Arctic Pilot Project, which involves drawing gas from the large natural gas reserves at Drake Point on Melville Island, overland transportation of the gas by pipeline to Bridport Inlet, liquefaction at that site and removal of the gas to southern markets using liquefied natural gas (LNG) carriers. Environmental considerations, particularly interactions between ships and marine mammals, are discussed in terms of the role of the Environmental Assessment and Review Panel (EARP), the National Energy Board (NEB), the Department of Indian Affairs and Northern Development (DIAND) and other government bodies.

- F 73 "Regulatory Approval-Self Sufficiency: Are They Compatible?"
Henri C. Rothschild.
In FRONTIER OIL AND GAS DEVELOPMENT: THE DECADE AHEAD. PROCEEDINGS OF THE TENTH ENVIRONMENTAL WORKSHOP, MONTEBELLO, QUEBEC, APRIL 28 - MAY 1, 1981.
The Arctic Petroleum Operators' Association (APOA) et al.
Calgary, Alberta : Arctic Institute of North America, University of Calgary, 1981. pp. 210-213.

333.823 15 Fro

The Department of Energy, Mines and Resources (DEMR), and specifically DEMR's Office of Environmental Affairs', role in contributing to the technical thoroughness of environmental assessment and reviews for projects related to energy development, is outlined in this paper. The speaker reports that regulatory interest in frontier oil and gas development requires the involvement of agencies at two or three levels of government, and seven or more agencies within the federal government alone. However, while recognizing that opportunities for streamlining exist, the author suggests that there are limits to what can be done in that area without compromising responsible decision making.

- F 75 REPORT OF THE YUKON NORTH SLOPE PROJECT REVIEW GROUP.
Gunther Abrahamson.
s.l. : Canada. Department of Indian Affairs and Northern
Development, 1983. 3 v.
333.731 5 Nor

The Yukon North Slope Project Review Group, composed of representatives from the Council for Yukon Indians (CYI), the Committee for Original Peoples' Entitlement (COPE), and the Yukon Territorial Government (YTG), was established in 1983 by the Department of Indian Affairs and Northern Development (DIAND) to advise on two applications for industrial development on Yukon's North Slope. CYI and COPE subsequently recommended that the applications be denied, while YTG felt that both should be approved. (The applications were indeed rejected in November 1983.) This report, compiled by the chairman of the review group (a non-voting representative of DIAND), documents the process followed by the group and the reasoning behind its recommendations. Volume one contains a summary report, including the submitted written recommendations; volume two provides a general account of the review group's public meetings held in Whitehorse and Ottawa; and volume three reproduces the prepared statements and written submissions presented to the review group. The scope of this report is wide and considers the social, economic, and environmental aspects of the proposed developments.

F 76 RESEARCH REPORT ON ATTITUDES TO NATIONAL ENERGY BOARD REFORM.

Jamie Benidickson.

Canadian Arctic Resources Committee Working Paper No. 2.

Ottawa, Ontario : Canadian Arctic Resources Committee, 1980.

62 pp.

351.823 Ben

This report, which was prepared for the Canadian Arctic Resources Committee (CARC), focuses on the role of the National Energy Board (NEB) as a principal agency for public decision-making in the Canadian energy sector. The author analyses comments and opinions on the NEB derived from interviews and literature.

CARC / NEB / government / legislation / regulations / regulatory agencies

F 77 RESOURCES AND THE ENVIRONMENT: POLICY PERSPECTIVES FOR CANADA.

edited by O.P. Dwivedi.

Toronto, Ontario : McClelland and Stewart, 1980. 346 pp.

333.715 Res

The major purpose of this book is to analyze the public policy process in Canada as it relates to natural resources management and related environmental considerations. Policy overviews and selected case studies are presented by 16 authors, on topics including coastal zone management, pipelines, and pollution. A comprehensive index is provided.

Ray Robinson.
In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.
Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1984. pp. 125-126.

333.823 05 Arc 1984

This paper explains that the federal government's Environmental Assessment and Review Process (EARP) is funded on the premise that the federal government must consider the potential environmental consequences of its actions. This premise applies to all activities involving federal land or money. There follows a description of how the EARP can work successfully and a specific example is used - the Venture Environmental Assessment Panel review of Mobil's Sable Island proposal (production of gas and condensates from fixed platforms, with a single phase pipeline to shore). Government approval and regulatory procedures are discussed, as well as the public review process.

- F 80 "The Role of the National Energy Board in the Review, Assessment and Regulation of Major Hydrocarbon Projects."
John Jenkins.
In PROCEEDINGS OF THE THIRTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, FAIRMONT, B.C., MAY 6-9, 1984.
Calgary, Alberta : Arctic Petroleum Operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1984. pp. 126-129.

333.823 05 Arc 1984

This paper outlines the role of the National Energy Board (NEB) in the process of determining whether major hydrocarbon projects, under federal jurisdiction, should proceed, as well as its subsequent role in regulating the planning, construction, and operation of those projects that are approved. In addition, the relationship between the NEB and other relevant government departments and agencies is outlined. The author explains the organizational structure of the NEB and reviews the National Energy Board Act, which guides and directs the Board. After detailing which factors are considered during the review process, the author concludes by discussing the implications of the decision-making and regulatory processes for the project planning cycle of industry proponents.

W.J.H. Stuart.
In MARINE TRANSPORTATION AND HIGH ARCTIC DEVELOPMENT: POLICY FRAMEWORK AND PRIORITIES: SYMPOSIUM PROCEEDINGS, MONTEBELLO, QUEBEC MARCH 21-23, 1979.
s.l. : Canadian Arctic Resources Committee, 1979. pp. 41-44.

330.971 9 Mar

This author identifies the scientific disciplines which may be involved when an oil company embarks upon an arctic resource development project, including biology, geophysics, hydrography, marine science, ecology, bathymetry, social sciences and medicine. The dilemma involved in unearthing the scientific data, which have been previously gathered, leads the author to a discussion of federal government policy regarding science, which is the main emphasis of this paper. Among the recommendations the author makes in concluding, is the establishment of a central index of essential arctic baseline data, the formulation of a long term plan for the gathering of such data, and close exchange with other nations sharing an interest in the Arctic.

Three assumptions provide the basis for this paper. The first is that there will continue to be a great deal of interest and concern, nationally and regionally, with regard to environmental protection (including socio-economic impact) in major development projects. The second is that interest and concern will focus to a large extent on the activities in the frontier areas of Canada, and the third is that the public will demand increased government and non-government involvement in the early planning stages of major developments. The speaker expands on these assumptions and the government's role in the matters, and also suggests that it is the planning process which requires streamlining rather than the approval process.

The author of this paper is the Assistant Deputy Minister, Northern Affairs Program, Department of Indian Affairs and Northern Development (DIAND). DIAND is responsible for non-renewable resource management and for coordination of federal activities in the north, where much of the frontier development takes place. This paper addresses the current context in which DIAND is operating - political, economic and the land claim situation. The author identifies specific problems and issues regarding the approval process - a need to update the northern policy framework and legislative gaps and overlaps, for example - and concludes by outlining how he proposes to alleviate the problems as presently perceived.

- F 85 A STUDY OF OIL SPILL CLEANUP AND DAMAGE COSTS RELATING TO VARIOUS WELL BLOWOUT SCENARIOS ON CANADA LANDS.
S.L. Ross Environmental Research Limited.
Canada. Environmental Protection Branch. Canada Oil and Gas Lands Administration. Technical Report No. 6.
s.l. : Canada. Environmental Protection Branch, 1985. 96 pp.

628.168 33 Ross

This study assesses the cost of cleanup operations and damages associated with uncontrolled oil well blowouts, occurring on Canada lands, as an indication of the level of financial security appropriate as a contingency against such expenditures. (The Oil and Gas Production and Conservation Act requires drilling operators to submit to the Canadian Oil and Gas Lands Administration (COGLA), proof of financial responsibility in respect to their liability for oil spill and debris-related damages.) To calculate costs, historical oil spill damage and cleanup cost trends are presented, based on information from 62 oil spills which occurred between 1967 and 1984.

Hardy Associates (1978) Ltd.
Dartmouth, Nova Scotia : Hardy Associates (1978) Ltd., 1985.
various pag.

351.823 88 Har

Nearly 300 federal government programs, administered through 17 federal government departments, interact with the offshore oil and gas industry in ways that have bearing on the industry's technological and scientific requirements. This extensive case study examines these programs, and the related interaction between government personnel and industry personnel, as well as reviewing the industry's perception of the role and value of the programs.

The Arctic research program of the Canadian Coast Guard, relative to the updating of the Arctic Shipping Pollution Prevention Regulations, is discussed in this paper. The political, social, economic and legislative background to the original regulations is presented and a number of factors leading to the current review process are examined. Transport Canada's (TC) role in the Arctic marine research and development program is presented and some thoughts on future research directions are given. A list of references is included.

F 91 "Why Assessments are Needed."

A.J. Hanson.

In PROCEEDINGS OF THE FOURTEENTH ANNUAL APOA/CPA-OOD WORKSHOP, "MAKING THE FRONTIERS CONVENTIONAL", FAIRMONT, B.C., MAY 12-15, 1985.

Calgary, Alberta : Arctic Petroleum operators' Association (APOA)/Canadian Petroleum Association-Offshore Operators' Division (CPA-OOD), 1985. pp. B2-B10.

333.823 05 Arc 1985

After briefly reviewing the history of the development of environmental assessment, the author of this paper notes that, during the years 1970-1980, science-based direction dominated the process. However, the author states that there is now far greater acceptance of the need for socially-based and institutionally-based direction as well. Some selected concerns, which the Canadian Environmental Assessment Research Council (CEARC) will likely be considering, are reviewed and the author includes a short list of references.

- G 1 FINAL REPORT: CONSERVATION MITIGATION, ALASKA HIGHWAY GAS PIPELINE PROJECT, FOOTHILLS PIPE LINES (SOUTH YUKON) LIMITED.

Jonathan Damp and S. Van Dyke.

Calgary, Alberta : Lifeways of Canada Ltd., 1982. 151 pp.

930.102 Dam

This document reports the results of a conservation program involving prehistoric sites identified during an archaeological reconnaissance of the Alaska Highway Gas Pipeline Project alignment. Of 23 prehistoric sites identified, nine were recommended for further testing and the findings are reported here in considerable detail. Numerous maps, charts and photographs are included. This report was prepared for Foothills Pipe Lines (South Yukon) Limited, of Whitehorse.

- H 1 ALASKA HIGHWAY REALIGNMENT KM 1558 TO KM 1574 (CHAMPAGNE AREA): ARCHAEOLOGICAL SURVEY.
Canada. Public Works Canada Project No. 013096.
Edmonton, Alberta : s.n., 1984. 30 pp.

333.72 Gre

This document provides an overview of a records and field study, which was conducted on sections of a proposed realignment of the Alaska Highway in the Yukon, to identify and evaluate heritage resources which would be affected by highway upgrading. Four prehistoric sites are identified, of which two contain cultural deposits of value where salvage archaeological work is recommended. This document is illustrated, a list of references is provided and site catalogues are appended.

- H 2 ANNOTATED BIBLIOGRAPHY OF PUBLICATIONS BASED ON RESEARCH SUPPORTED BY THE NORTHERN SCIENTIFIC TRAINING PROGRAM 1983.
Northern Policy and Coordination Branch, Department of Indian Affairs and Northern Development.
Ottawa, Ontario : Canada. Department of Indian Affairs and Northern Development, 1985. 182 pp.

500.971 072 Can

This annotated bibliography comprises 276 references to scientific papers, seminar or conference presentations and theses based on projects supported by the Department of Indian Affairs and Northern Development's (DIAND) northern scientific training program. Since universities receive block funding that they then distribute among student projects, the first section of this bibliography reflects this procedure and the entries are listed by university name and then alphabetically by author surname. Indexes by author, discipline and geographic focus complete this bibliography.

Stan Van Dyke.
Calgary, Alberta : Lifeways of Canada Limited, 1981. 78 pp.

333.823 315 3 Van

Prepared for Foothills Pipe Lines (South Yukon) Ltd. (FPL(SY)), this document reports the results of a 1981 archaeological survey, carried out as part of a detailed impact assessment, of the preferred alignment (at 1980) of the Alaska Highway Gas Pipeline (AHGP) route in the Yukon Territory and including a small portion of British Columbia. The objectives of this survey are to locate and assess archaeological resources, lying on the right-of-way, which could be potentially impaired or destroyed by activities associated with the construction of the proposed pipeline. The document includes a summary and assessment of resources located as well as recommendations for further study. Photographs and maps illustrate the report and a list of references is provided.

Anchorage, Alaska : University of Alaska, 1979. 2 microfiche.

MF AEIDC

This bibliography and index was compiled to assist the North Slope Borough, Alaska, in complying with inventory and analysis requirements of Alaska's Coastal Management Act. The material is divided into five sections. Section I is the master bibliography, which is split into six chapters - habitats; cultural resources; land and water uses; land and resource ownership and management; historic, prehistoric and archaeological resources; and resource analysis. Section II is an author index, Section III a geographic index, Section IV a keyword index and Section V is a source location guide.

- H 6 CANADIAN MARITIME LAW AND THE OFFSHORE: A PRIMER.

W. Wylie Spicer.

Canadian Institute of Resources Law. Working Paper 6.

Calgary, Alberta : Canadian Institute of Resources Law, University of Calgary, 1984. 65 pp.

343.710 962 Spi

This paper reviews those principles of admiralty law that pertain particularly to oil and gas activities offshore Canada. The basic nature of Canadian maritime law is examined, with an explanation of the role and jurisdiction of the Federal Court of Canada. The issue of whether, and for what purposes, an oil rig is a ship is discussed, as well as drilling contracts and the roles applying to salvage and towing operations. The paper concludes with a review of the choice of law and forum clauses found in offshore agreements, and their legal ramifications.

STRATEGY AND THE ARCTIC.

edited by R.B. Byers and Michael Slack.

Canadian Institute of Strategic Studies. Polaris Papers 4.

Toronto, Ontario : Canadian Institute of Strategic Studies, 1986.

116 pp.

355.430 5 Str

Energy development, claims negotiation, and political evolution are changing Canada's north and its relationship with the rest of the country, it is reported in this publication. The volume's theme is the need to assess the military-strategic northern environment within the broad geostrategic (the combination of strategic factors and such factors as geography and demography), economic, and political context of both the Canadian Arctic and the circumpolar region. The current military-strategic environment is discussed in relation to the future strategic importance of the Arctic from both the Canadian and the international perspective.

ENVIRONMENTAL STUDIES REVOLVING FUNDS.

[Individual volumes have different publishers and are catalogued separately. Please see full entries under appropriate citation numbers in other categories.]
19 vol.

- Report No. 001 Distribution of Bowhead Whales and Other Marine Mammals in the Southeast Beaufort Sea, August-September 1983,
by Peter J. McLaren and Rolph A. Davis. See: A224
- Report No. 004 An Evaluation of Native Harvest Survey Methodologies in Northern Canada,
by Peter J. Usher, et al. See: B24
- Report No. 006 Effectiveness of the Repeat Application of Chemical Dispersants in Oil,
by Randy Belore. See: D73
- Report No. 007 Documentation of Iceberg Groundings,
By Mona El-Tahan, et al. See: A162
- Report No. 008 Assessment of Marine Radars for the Detection of Ice and Icebergs,
by Joseph P. Ryan, Michael Harvey and Andrew Kent. See: A147
- Report No. 009 Bowhead Whale Monitoring Study in the Southeast Beaufort Sea, July-September 1984,
by Lois A. Harwood and Gary A. Borstad. See: A219
- Report No. 010 Ice Scour Bibliography,
edited by C. Ross Goodwin, Jean C. Finley and Lynne M. Howard. See: A173
- Report No. 011 Methods for the Fracturing of Icebergs,
by P.H. Gammon and J.C. Lewis. See: D115
- Report No. 017 Scour Around Seafloor Structures,
by Keith Philpott Consulting Limited. See: D159
- Report No. 023 Beaufort Sea Extreme Wave Studies Assessment,
by Alan Murray and Marc Maes. See: A150

- Report No. 024 Northern Employment and Training in the Oil and Gas Industry,
by DPA Group Inc. and Intergroup Consulting Economists Limited. See: B36
- Report No. 025 Distribution and Abundance of Seals in the Beaufort Sea, Amundsen Gulf, and Prince Albert Sound, 1984,
by Michael C.S. Kingsley. See: A222
- Report No. 026 Bibliography on the Fate and Effects of Arctic Marine Oil Pollution,
edited by Stuart C. Young. See: A256
- Report No. 028 Distribution of Bowhead Whales in Relation to Hydrometeorological Events in the Beaufort Sea,
Denis H. Thomson, et al. See: A161
- Report No. 031 Stranded Oil in Coastal Sediments: Permeation in Tidal Flats,
by J.R. Harper and B. Humphrey. See: A313
- Report No. 032 Canadian Beaufort Sea 1984 Repetitive Mapping of Ice Scour,
by J. Shearer, B. Laroche and G. Fortin. See: A154
- Report No. 040 Family Life Adaptations to Offshore Oil and Gas Development,
by Keith Storey, et al. See: B25
- Report No. 042 Management of Small Ice Masses,
by K.G. Anderson, et al. See: D111
- Report No. 050 The Training and Employment of Northern Canadians: An Annotated Bibliography,
edited by J.C. Finley and C.R. Goodwin. See: B57

PERSONAL AUTHOR INDEX
